Symposium Organizer: T. W. GOODWIN

* *Ex officio* Member of Committee.

† Representative of Editorial Board of the *Biochemical Journal*.

‡ Representative of Editorial Board of *Clinical Science*.

The Biochemical Society exists to advance the science of biochemistry through meetings and publications. Eleven meetings a year are held, each at a different place; original papers are presented and special topics are discussed at symposia and colloquia.

Persons interested in biochemistry are eligible for election as Members. Details of further facilities accorded to Members, and forms of application for membership, are available from the Executive Secretary, The Biochemical Society, 7 Warwick Court, London W.C.1 (01-405 1941/2).

The *Biochemical Journal* is published and distributed by the Biochemical Society. It is published twice monthly, in four or more volumes per year. It is planned that five volumes will appear in 1969. The index for each volume is published separately.

Subscriptions to the *Biochemical Journal*. For non-members of the Biochemical Society the subscription to the Journal at the present rate of publication is £40 per year (£8 per volume). For non-members in the U.S.A. the subscription is \$96 per year (\$19.20 per volume). All subscriptions are payable in advance at the time of ordering. Orders and subscriptions should be sent to the Biochemical Society (Publications), 7 Warwick Court, London W.C.1.

Claims regarding issues lost or damaged in transit should be addressed to the Biochemical Society at the address in the preceding paragraph. No claims can be entertained if they are received later than three months after the date of posting of the Journal.

Back Numbers. Enquiries for volumes 1-19 should be addressed to William Dawson & Sons Ltd., Back Issues Department, Cannon House, Park Farm Road, Folkestone, Kent. Quotations for available issues of subsequent volumes and parts may be obtained on application to Walter J. Johnson Ltd., Berkeley Square House, Berkeley Square, London W.1, or to The Biochemical Society.

Advertisements. Applications for advertising space should be sent to the Advertising Department, The Biochemical Society, 7 Warwick Court, London W.C.1 (01-405 1941/2). Copy is required eight weeks before publication date. Rate cards are available on request.

	PAGE
The regulation of enzymes of aromatic-ring fission in fungi: organisms using only the protocatechuate pathway. By R. B. CAIN	76 P
The regulation of the enzymes of aromatic-ring fission in an actinomycete. By D. L. RANN and R. B. CAIN	77 P
A dietary factor required for the induction of hepatic microsomal cytochrome <i>P</i> -450 by phenobarbitone. By W. J. MARSHALL and A. E. M. MCLEAN	77 P
Gut bacteria and the metabolism of cyclamate in the rat. By A. G. RENWICK and R. T. WILLIAMS	78 P
The physical properties and mechanism of action of deoxyoxoglucuronate dehydratase from <i>Pseudomonas acidovorans</i> . By H. HASSALL, R. JEFFCOAT and S. DAGLEY	78 P
Multiple polymers of histidine ammonia-lyase. By A. K. SOUTAR and H. HASSALL	79 P
Further properties of multiple forms of mitochondrial monoamine oxidase. By G. G. S. COLLINS and M. B. H. YODIM	80 P
The importance of α -glycerophosphate oxidase in oxidation of extramitochondrial reduced nicotinamide-adenine dinucleotide in vertebrate and insect muscle. By B. CRABTREE and E. A. NEWSHOLME	80 P
The effects of calcium ions on the activities of hexokinase, phosphofructokinase and fructose 1,6-diphosphatase from vertebrate and insect muscles. By H. VAUGHAN and E. A. NEWSHOLME	81 P
Studies on equine trypsinogen and trypsin. By C. I. HARRIS and T. HOFMANN	82 P
Zinc-dependent conformational stability in the alkaline phosphatase of <i>Escherichia coli</i> . By C. N. A. TROTMAN and C. GREENWOOD	82 P
Insulin conformations. By S. LEWIN	83 P
Order of strength of ionic linkages in protein interactions. By S. LEWIN	83 P
Effect of intravenous infusion of L-tryptophan on the cerebral metabolism of 5-hydroxyindoles and dopamine (3,4-dihydroxyphenethylamine). By A. T. B. MOIR	84 P
Isotopic exchange between acetylcholine and [<i>Me</i> - ¹⁴ C]choline catalysed by human placental choline acetyltransferase. By D. MORRIS and D. S. GREWAAL	85 P
Isolation of a mucoprotein from porcine gastric mucosa. By D. SNARY and A. ALLEN	85 P
Properties of an α -D-galactosyltransferase in human tissues obtained from blood-group B donors. By C. RACE and W. M. WATKINS	86 P
Properties of α -galactosidase I from <i>Vicia faba</i> . By P. M. DEY and J. B. PRIDHAM	86 P
Protein-polysaccharide complexes secreted by the calf tracheal epithelium <i>in vitro</i> . By P. W. KENT, I. J. MOLINEUX, M. R. HAEGELE and F. K. STEVENSON	87 P
Countercurrent studies of some porphyrins of various tissues. By S. G. SMITH, R. V. BELCHER and R. MAHLER	88 P
Glutathione-protein mixed disulphides in human lens. By J. J. HARDING	88 P
Diquat cataract in the rat. By A. PIRIE, J. R. REES and N. J. HOLMBERG	89 P
Spontaneous reversal of arsenate-induced swelling of mitochondria. By A. P. DAWSON, N. GAINS and M. J. SELWYN	89 P
Proton transport in mitochondrial oxidative phosphorylation. By M. J. SELWYN and A. P. DAWSON	90 P
The electron-transport chain of <i>Tetrahymena pyriformis</i> strain ST. By G. TURNER, D. LLOYD and B. CHANCE	91 P
The dialysis of small volumes (5-50 μ l.) of fluid. By N. G. HEATLEY	91 P

PAPERS ACCEPTED FOR PUBLICATION

- Molecular cohesion in plant cell walls. Methylation analysis of pectic polysaccharides from the cotyledons of white mustard. By D. A. REES and N. J. WIGHT
- Transcription of bacteriophage T4 deoxyribonucleic acid *in vitro*. By J. O. BISHOP and F. W. ROBERTSON
- Inhibition of bacterial growth by metal salts. A survey of effects on the synthesis of ribonucleic acid and protein. By M. R. BLUNDELL and D. G. WILD
- Inhibition of bacterial growth by metal salts. The accumulation of ribonucleic acid during inhibition of *Escherichia coli* by cobalt chloride. By M. R. BLUNDELL and D. G. WILD
- Solution structures of ferrihaem in some dipolar aprotic solvents and their binary aqueous mixtures. By S. B. BROWN and I. R. LANTZKE
- The effect of dietary and hormonal conditions on the activities of glycolytic enzymes in rat epididymal adipose tissue. By E. D. SAGGERSON and A. L. GREENBAUM
- A new approach to the analysis of hybridization of bacterial nucleic acids. Analysis of the ribosomal ribonucleic acids of *Bacillus subtilis*. By R. J. AVERY and J. E. M. MIDGLEY
- An analysis of the ribosomal ribonucleic acids of *Escherichia coli* by hybridization techniques. By R. J. AVERY, J. E. M. MIDGLEY and G. H. PIGGOTT
- Comparison of the protein-synthesizing machinery in the skeletal muscle of normal and dystrophic Bar Harbor mice. By D. C. WATTS and J. D. REID
- The regulation of pea-seed phosphofructokinase by phosphoenolpyruvate. By G. J. KELLY and J. F. TURNER
- Quantitative determination of deoxyribonucleic acid in rat brain. By N. W. PENN and R. SUWALSKI
- Calorimetric studies of the haemoglobin-haptoglobin reaction. By E. C. ADAMS and M. R. WEISS
- The redox state of free nicotinamide-adenine dinucleotide phosphate in the cytoplasm of rat liver. By R. L. VEECH, L. V. EGGLESTON and H. A. KREBS
- The cellulase of *Fusarium solani*. Resolution of the enzyme complex. By T. M. WOOD
- Acetoacetylation of insulin. By D. G. LINDSAY and S. SHALL
- Isolation of a third bovine neurophysin. By R. RAUCH, M. D. HOLLENBERG and D. B. HOPE
- Effects of insulin on the pattern of glucose metabolism in the perfused working and Langendorff heart of normal and insulin-deficient rats. By E. B. CHAIN, K. R. L. MANSFORD and L. H. OPIE
- Androgen sulphate formation in male and female mice. By D. A. LEWIS
- The effect of magnesium ion deprivation on the synthesis of mucopeptide and its precursors in *Bacillus subtilis*. By A. J. GARRETT
- A sodium ion concentration gradient formed during the absorption of glycine by mouse ascites-tumour cells. By A. A. EDDY
- Properties of the inactive ribosomal components in rat liver and hepatoma. By T. E. WEBB and H. P. MORRIS
- Some properties of cytochrome *b*₅ from liver microsomes of man, monkey, pig and chicken. By F. G. NÓBREGA, P. S. ARAUJO, M. PASETTO and I. RAW
- Two fractions required for cell-free protein synthesis with components from rabbit reticulocytes. By B. B. COHEN

THE BIOCHEMICAL JOURNAL

NOTES FOR CONTRIBUTORS

It is the policy of the *Biochemical Journal* to publish papers in English in all fields of biochemistry, provided that they make a sufficient contribution to biochemical knowledge. Papers may include new results obtained experimentally, descriptions of new experimental methods of biochemical importance, or new interpretations of existing results. All work presented should have as its aim the development of biochemical concepts rather than the mere recording of facts. Preliminary or inconclusive experiments should not generally be described.

Two types of paper are accepted by the editors as follows:

(1) Full-length papers. Papers submitted for publication should be sent together with an extra copy of the synopsis to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London W.C.1. Typescripts should bear the name and address of the person to whom the proof of the paper is to be sent. All communications about reprints should be addressed to the Executive Secretary, The Biochemical Society, 7 Warwick Court, London W.C.1.

Papers submitted should be written concisely. Special attention is directed to *Policy of the Journal and Instructions to Authors, Biochem. J.* (1969), **112**, 1 (obtainable from the Executive Secretary, price 2s. 6d. post free). Strict observance of these requirements will shorten the interval between the receipt of a paper and its publication. Typescripts that are not concise or do not conform to the conventions of the *Biochemical Journal* will be returned to the authors for revision. If a paper that has been returned to an author for revision is not resubmitted within one month, it will, on resubmission, be deemed to be a new paper and the date of receipt altered accordingly. A revised paper containing a significant amount of new material will also be redated.

Submission of a paper to the Editorial Board implies that it reports unpublished work, that it is not under consideration for publication elsewhere, and that if accepted for the *Biochemical Journal* it will not be published elsewhere in the same form, either in English or in any other language, without

the consent of the Editorial Board. Requests for reproduction of material should be addressed to the Editorial Secretary.

Papers should be headed by an informative title, by the names of the authors and by the name and address of the establishment where the work was performed. Details of financial support may appear in the acknowledgements at the end of the paper. Authors should give a shortened version of the title, not exceeding 45 letters and spaces, suitable for a running title in the published pages of the work.

The second copy of the synopsis requested above is required solely to assist in the selection of suitable editors or referees, or both.

The numbering of parts in a series is not permitted. Titles and subtitles may, however, be used.

It would help the editors if the author, when submitting a paper, would enclose reprints of relevant preceding papers, especially if they are not published in the *Biochemical Journal*.

Form of papers submitted for publication. Before preparing papers authors should consult a current issue of the Journal to make themselves familiar with the general format, such as the use of cross-headings, lay-out of tables and citation of references. The need for revision of badly prepared typescripts or diagrams will delay publication. Papers should be in double-spaced typing throughout (including references and legends of tables and figures) on sheets of uniform size with wide margins. The top copy should be submitted.

Papers on specialized subjects should be presented so that they are intelligible to the ordinary reader of the Journal. Sufficient information must be included to permit repetition of the experimental work.

Papers of biochemical interest are often divided into the following sections: (a) the **synopsis**, not more than 3–4% of the length of the paper; it may be divided into numbered sections; (b) the **introduction**, containing the reasons for doing the work; (c) **Experimental**, including materials and methods; (d) **Results**: these should be given concisely; the use of both tables and figures to present the same results is rarely permitted; (e) **Discussion**; (f) the acknowledgements;

(g) References. Authors are urged to consider carefully whether the material in their individual papers needs to be fully subdivided in the manner of sections (c), (d) and (e). In many cases two of these sections can be combined and thus save space and gain conciseness and clarity. In papers dealing predominantly with techniques, the Experimental and Results sections should be amalgamated; other papers of a more general nature are often simplified by the combination of Results and Discussion, and in chemical papers the Experimental section may be placed at the end. When a separate Discussion is used it should not recapitulate the results but only discuss their significance and relationship to the object of the work and their relation to the work of other people.

(2) **Short Communications.** Typescripts should be submitted *in duplicate*, written in English, and conform strictly to the form of the Journal as far as spelling and abbreviations are concerned. Such communications must not exceed 1200 words of text, but in addition may include either one table, typed on a separate sheet, or one figure, drawn according to the rules of the Journal. If no figure or table is included the text may be expanded to 1400 words. Communications should be addressed to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London W.C.1. Papers should be complete in themselves: (1) the methods used in experimental work must be adequately described or sufficient references given to allow repetition of the work; (2) sufficient indication of the results of experimental work must be included to justify the claims made. Theoretical contributions will be considered equally with papers dealing with experimental work. The editors' and referees' decisions will be final; contributions that are not being published will be returned to the authors with the minimum delay.

Preparation of Papers

The *Biochemical Journal* uses as a standard for spelling the *Concise Oxford Dictionary of Current English* (Oxford: Clarendon Press). For the technique of writing authors may find it helpful also to consult *The Complete Plain Words*, by Sir Ernest Gowers (London: H.M.S.O. and Penguin Books).

Abbreviations. New abbreviations should be coined only for unwieldy names, and should not be used at all unless those names occur frequently (more than about ten times). All abbreviations for names of compounds except those listed below must be defined together in a footnote. In the title and synopsis, abbreviations should be avoided. Abbreviations for units (e.g. min., cm., g.) should be used throughout. Chemical symbols as abbreviations for

elements, groups or compounds are used only in the Experimental section, and in legends to tables and figures, unless their use elsewhere is justified by special circumstances. The abbreviation for the plural of a unit is the same as that for the singular, unless confusion is likely to arise. Thus 'centimetres' is 'cm.', not 'cms.'

Accepted abbreviations that may be used without definition:

ADP, CDP, GDP, IDP, UDP	5'-Pyrophosphates of adenosine, cytidine, guanosine, inosine, uridine
AMP etc.	Adenosine 5'-phosphate etc.
ATP etc.	Adenosine 5'-triphosphate etc.
CM-cellulose	Carboxymethylcellulose
CoA and acyl-CoA	Coenzyme A and its acyl derivatives
DEAE- cellulose	Diethylaminoethylcellulose
DNA	Deoxyribonucleic acid
DNP-	2,4-Dinitrophenyl-
EDTA	Ethylenediaminetetra-acetate
FAD	Flavin-adenine dinucleotide
FMN	Flavin mononucleotide
GSH, GSSG	Glutathione, reduced and oxidized
NAD	Nicotinamide-adenine dinucleotide
NADP	Nicotinamide-adenine dinucleotide phosphate
NMN	Nicotinamide mononucleotide
P _i , PP _i	Orthophosphate, pyrophosphate
RNA	Ribonucleic acid
tris	2-Amino-2-hydroxymethylpropane-1,3-diol

Illustrations. These constitute an expensive item in publication and may increase the time taken in printing. Their number should be kept to a minimum. Illustrations should be on separate sheets and packed flat; they should bear the author's name, the title of the paper and the figure number on the back. Their approximate position should be indicated in the margin of the typescript.

Tables. Tables should have legends which make their general meaning comprehensible without reference to the text. Footnotes should be kept to a minimum. Conditions specific to the particular experiment should be stated. Reference to the text for general experimental methods is permissible provided that there is no ambiguity. The units in which the results are expressed, e.g. g./100ml., should be given at the top of each column, and not repeated on each line of the table.

Tables should be typed on separate sheets and their approximate position in the text indicated. Words or numerals should be repeated on successive lines: 'ditto' or ',' is not to be used.

Unilever European Fellowships 1970-71

Three Fellowships of up to £1,700 per annum will be awarded for the academic year 1970-71, two for research in biochemistry in a laboratory in continental Europe by British citizens resident in Great Britain and one for work in Britain by European nationals. Applicants should hold a Ph.D. degree or offer evidence of having equivalent qualifications or experience.

The Fellowships are tenable for one year in the first instance and are available for work in any laboratory or institute in Britain or continental Europe, including Unilever Research Laboratories.

Travelling expenses will be paid and financial assistance for attendance at meetings in Europe may also be provided.

The Fellowships shall be acknowledged in any publication resulting from the work carried out during the period of the award by a statement that the recipient was a "Unilever European Fellow of the Biochemical Society".

Applications, which should include an outline of the proposed research work, a statement that the applicant can be accepted at the chosen place of work, a list of the applicant's publications, and the names and addresses of two referees, are now invited. Application forms may be obtained from the Executive Secretary, The Biochemical Society, 7 Warwick Court, London, W.C.1, and should be returned to him not later than 31 December 1969.
