

Short Communications

The Editorial Board announces an important change in the rules governing the maximum length of Short Communications. Authors may now submit typescripts that do not exceed 2400 words in length inclusive of the title, references etc. Authors may include up to two insertions such as tables, figures or schemes; in these cases authors must assess what proportion of a page these insertions will occupy and reduce the number of text words accordingly at the rate of 700 words per full page of the Journal. Under no circumstances whatsoever can a complete Short Communication occupy more than four pages of the *Biochemical Journal*.

Symposium Organizer: R. M. S. SMELLIE

* *Ex officio* Member of Committee.

† Representative of Editorial Board of the *Biochemical Journal*.

‡ Representative of Editorial Board of *Clinical Science*.

The **Biochemical Society** exists to advance the science of biochemistry through meetings and publications. Eleven meetings a year are held, each at a different place; original papers are presented and special topics are discussed at symposia and colloquia.

Persons interested in biochemistry are eligible for election as Members. Details of further facilities accorded to Members, and forms of application for membership, are available from the Executive Secretary, The Biochemical Society, 7 Warwick Court, London WC1R 5DP (01-242 1076/7/8/9).

The *Biochemical Journal* is published and distributed by the Biochemical Society. It is published twice monthly, in four or more volumes per year. It is planned that five volumes will appear in 1971. The index for each volume is published separately.

Subscriptions to the *Biochemical Journal*. For non-members of the Biochemical Society the subscription to the Journal at the present rate of publication is £45 per year (£9 per volume). For non-members in the U.S.A. the 1971 subscription is \$110 per year (\$22 per volume). All subscriptions are payable in advance at the time of ordering. Orders and subscriptions should be sent to the Biochemical Society (Publications), 7 Warwick Court, London WC1R 5DP.

Claims regarding issues lost or damaged in transit should be addressed to the Biochemical Society at the address in the preceding paragraph. No claims will be entertained if they are received later than three months after the date of posting of the Journal.

Back Numbers. Enquiries for volumes 1-9 should be addressed to William Dawson & Sons Ltd., Back Issues Department, Cannon House, Park Farm Road, Folkestone, Kent. Quotations for available issues of subsequent volumes and parts may be obtained on application to Walter J. Johnson Ltd., Berkeley Square House, Berkeley Square, London W1X 6BA, or to the Biochemical Society.

Advertisements. Applications for advertising space should be sent to the Advertising Department, The Biochemical Society, 7 Warwick Court, London WC1R 5DP (01-242 1076/7/8/9). Copy is required eight weeks before publication date. Rate cards are available on request.

Microfilms. Volumes 1-89 (1906-1963) have been recorded on microfilm by Micro Methods Ltd., East Ardsley, Wakefield, Yorks. Details are available from the firm or the Biochemical Society.

PAPERS ACCEPTED FOR PUBLICATION

- Properties of the sarcolemmal calcium ion-stimulated adenosine triphosphatase of the hamster skeletal muscle. By D. B. McNAMARA, P. V. SULAKHE and N. S. DHALLA
- Lysine biosynthesis in *Saccharomyces*. Conversion of α -amino adipic acid into α -amino adipic α -semi-aldehyde. By A. K. SINHA and J. K. BHATTACHARJEE
- The effects of certain glycols, substituted glycols and related organic solvents on the thermal stability of soluble collagen. By G. J. HART, A. E. RUSSELL and D. R. COOPER
- Biosynthesis of liver membranes. Incorporation of [³H]leucine and [¹⁴C]glucosamine into proteins and lipids of liver microsomal and plasma membrane fractions. By W. H. EVANS and J. W. GURD
- The inactivation of phenylalanine hydroxylase by 2-amino-4-hydroxy-6,7-dimethyltetrahydropteridine and the aerobic oxidation of the latter. The effects of catalase, dithiothreitol and reduced nicotinamide-adenine dinucleotide. By A. JAKUBOVIČ, L. I. WOOLF and E. CHAN-HENRY
- The non-enzymic hydroxylation of phenylalanine to tyrosine by 2-amino-4-hydroxy-6,7-dimethyl-5,6,7,8-tetrahydropteridine. By L. I. WOOLF, A. JAKUBOVIČ and E. CHAN-HENRY
- Human senile cataractous lens protease. Isolation and some chemical characteristics. By A. A. SWANSON and J. T. NICHOLS
- Pyruvate, phosphate dikinase from *Bacteroides symbiosus*. By R. E. REEVES
- Application of the isotope-dilution principle to the analysis of factors affecting the incorporation of [³H]-uridine and [³H]cytidine into cultured lymphocytes. Evaluation of pools in serum and culture media. By D. R. FORSDYKE
- The composition of peptidochitodextrins from sarcophagid puparial cases. By H. LIPKE and T. GEORGHEGAN
- β -Hydroxy steroid dehydrogenase activity in the mitochondria of rat adrenal homogenates. By R. S. BASCH and M. J. FINEGOLD
- β -Galactosidase-catalysed hydrolysis of β -D-galactopyranosyl azide. By M. L. SINNOTT
- Studies on the mechanism and regulation of C-4 demethylation in cholesterol biosynthesis. The role of adenosine 3':5'-cyclic monophosphate. By D. P. BLOXHAM, D. C. WILTON and M. AKHTAR
- The use of bifunctional biotinyl compounds to determine the arrangement of subunits in avidin. By N. M. GREEN, L. KONIECZNY, E. J. TOMS and R. C. VALENTINE
- Separation and structural analysis on vinyl- and isovinyl-azobilirubin derivatives. By F. H. JANSEN and M. S. STOLL
- The synthesis of ribonucleic acid in immature rat uterus responding to oestradiol-17 β . Fractionation of ribonucleic acid by electrophoresis on polyacrylamide gels. By J. T. KNOWLER and R. M. S. SMELLIE
- Cell-free synthesis of tryptophanase from *Escherichia coli*. Use of ribonucleic acid isolated from induced cells and a comparison of the product from a system employing polyribosomes with that from one employing ribosomes and exogenous ribonucleic acid. By J. H. PARISH, S. A. M. KHAIRUL BASHAR, N. L. BROWN and M. BROWN
- Mössbauer studies of adrenodoxin. The mechanism of electron transfer in a hydroxylase iron-sulphur protein. By R. CAMMACK, K. K. RAO, D. O. HALL and C. E. JOHNSON
- Carbohydrate metabolism of the isolated perfused liver of normal and genetically obese-hyperglycaemic (*ob/ob*) mice. By J. ELLIOTT, D. A. HEMS and A. BELOFF-CHAIN
- Excretion in dog bile of glucose and xylose conjugates of bilirubin. By J. FEVEY, G. P. VAN HEES, P. LEROY, F. CAMPERNOLLE and K. P. M. HEIRWEGH
- Mass-spectrometric structure elucidation of dog bile azopigments as the acyl glycosides of glucopyranose and xylopyranose. By F. CAMPERNOLLE, G. P. VAN HEES, J. FEVEY and K. P. M. HEIRWEGH
- The effects of the stress caused by experimental procedures on alanine, aspartate, glutamate and glutamine in rat liver. By D. F. HEATH, D. R. GEORGE and J. G. ROSE
- The pathway of glutamine and glutamate oxidation. By S. KOVAČEVIĆ

NOTES FOR CONTRIBUTORS

It is the policy of the *Biochemical Journal* to publish papers in English in all fields of biochemistry, provided that they make a sufficient contribution to biochemical knowledge. Papers may include new results obtained experimentally, descriptions of new experimental methods of biochemical importance, or new interpretations of existing results. All work presented should have as its aim the development of biochemical concepts rather than the mere recording of facts. Theoretical contributions will be considered equally with papers dealing with experimental work. Preliminary or inconclusive experiments should not generally be described.

For detailed instructions on the preparation of papers contributors should refer to *Policy of the Journal and Instructions to Authors* [*Biochem. J.* (1971), **121**, 1] (obtainable from the Executive Secretary, The Biochemical Society, 7 Warwick Court, London WC1R 5DP, price 15p. post free). In general the *Biochemical Journal* uses the recommended SI (Système Internationale) symbols [see *Symbols, Signs and Abbreviations Recommended for British Scientific Publications* (1969) (London: The Royal Society)]. For biochemical nomenclature authors should as far as possible follow the Tentative Rules and Proposals of the IUPAC-IUB Commission on Biochemical Nomenclature [see *Biochem. J.* (1971), **121**, 11]. For chemical nomenclature the IUPAC Rules should be followed [see *Biochem. J.* (1971), **121**, 11]. The *Biochemical Journal* uses as a standard of spelling the *Concise Oxford Dictionary of Current English* (Oxford: Clarendon Press).

Two types of paper are accepted by the editors: **Full-length papers.** Papers submitted for publication should be sent together with an extra copy of the synopsis to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London WC1R 5DP. Typescripts should bear the name and address of the person to whom the proof of the paper is to be sent.

Papers submitted should be written concisely. Typescripts that are not concise or do not conform to the conventions of the *Biochemical Journal* will be returned to the authors for revision. If a paper that has been returned to an author for revision is not resubmitted within one month, it will, on resubmission, be deemed to be a new paper and the date

of receipt altered accordingly. A revised paper containing a significant amount of new material will also be redated.

Submission of a paper to the Editorial Board implies that it reports unpublished work, that it is not under consideration for publication elsewhere, and that if accepted for the *Biochemical Journal* it will not be published elsewhere in the same form, either in English or in any other language, without the consent of the Editorial Board.

Papers should be headed by a concise but informative title, by the names of the authors and by the name and address of the establishment where the work was performed. Details of financial support may appear in the acknowledgements at the end of the paper.

Before preparing papers authors should consult a current issue of the Journal to make themselves familiar with the general format, such as the use of cross-headings, lay-out of tables and citation of references. Papers should be in double-spaced typing throughout (including references and legends of tables and figures) on sheets of uniform size with wide margins. The top copy should be submitted. It cannot be overemphasized that the need for revision of badly prepared typescripts inevitably leads to delays in publication.

Papers on specialized subjects should be presented so that they are intelligible to the ordinary reader of the Journal. Sufficient information must be included to permit repetition of the experimental work.

Short Communications. Typescripts should be submitted *in duplicate*, written in English, and conform strictly to the form of the Journal as far as spelling and abbreviations are concerned. Such communications must not exceed 1200 words of text, but in addition may include either one table, typed on a separate sheet, or one figure, drawn according to the rules of the Journal. If no figure or table is included the text may be expanded to 1400 words. Communications should be addressed to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London WC1R 5DP. Papers should be complete in themselves: (1) the methods used in experimental work must be adequately described or sufficient references given to allow repetition of the work (2) sufficient indication of the results of experimental work must be included to justify the claims made.
