

Short Communications

The Editorial Board announces an important change in the rules governing the maximum length of Short Communications. Authors may now submit typescripts that do not exceed 2400 words in length inclusive of the title, references etc. Authors may include up to two insertions such as tables, figures or schemes; in these cases authors must assess what proportion of a page these insertions will occupy and reduce the number of text words accordingly at the rate of 700 words per full page of the Journal. Under no circumstances whatsoever can a complete Short Communication occupy more than four pages of the *Biochemical Journal*.

November 1971 Volume 125 No. 2

† Representative of Editorial Board of the *Biochemical Journal*.

‡ Representative of Editorial Board of *Clinical Science*.

The **Biochemical Society** exists to advance the science of biochemistry through meetings and publications. Eleven meetings a year are held, each at a different place; original papers are presented and special topics are discussed at symposia and colloquia.

Persons interested in biochemistry are eligible for election as Members. Details of further facilities accorded to Members, and forms of application for membership, are available from the Executive Secretary, The Biochemical Society, 7 Warwick Court, London WC1R 5DP (01-242 1076/7/8/9).

The *Biochemical Journal* is published and distributed by the Biochemical Society. It is published twice monthly, in four or more volumes per year. It is planned that five volumes will appear in 1971. The index for each volume is published separately.

Subscriptions to the *Biochemical Journal*. For non-members of the Biochemical Society the subscription to the Journal at the present rate of publication is £45 per year (£9 per volume). For non-members in the U.S.A. the 1971 subscription is \$110 per year (\$22 per volume). All subscriptions are payable in advance at the time of ordering. Orders and subscriptions should be sent to the Biochemical Society (Publications), 7 Warwick Court, London WC1R 5DP.

Claims regarding issues lost or damaged in transit should be addressed to the Biochemical Society at the address in the preceding paragraph. No claims will be entertained if they are received later than three months after the date of posting of the Journal.

Back Numbers. Enquiries for volumes 1-9 should be addressed to William Dawson & Sons Ltd., Back Issues Department, Cannon House, Park Farm Road, Folkestone, Kent. Quotations for available issues of subsequent volumes and parts may be obtained on application to Walter J. Johnson Ltd., Berkeley Square House, Berkeley Square, London W1X 6BA, or to the Biochemical Society.

Advertisements. Applications for advertising space should be sent to the Advertising Department, The Biochemical Society, 7 Warwick Court, London WC1R 5DP (01-242 1076/7/8/9). Copy is required eight weeks before publication date. Rate cards are available on request.

Microfilms. Volumes 1-89 (1906-1963) have been recorded on microfilm by Micro Methods Ltd., East Ardsley, Wakefield, Yorks. Details are available from the firm or the Biochemical Society.

	PAGE
Serum acid hydrolases in the mucopolysaccharidoses. By W. L. CUNNINGHAM and P. R. RAMAGE	33 P
Properties of phosphoenolpyruvate carboxylase isolated from maize leaves. By M. W. KERR and A. ROBERTSON	34 P
Carbonic anhydrase: multiple forms in plants. By B. D. PATTERSON, C. A. ATKINS and D. GRAHAM	34 P
Histochemical localization of enzymes in heart muscle. By D. R. JARVIE, J. H. OTTAWAY, J. NOLTE and D. PETTE	35 P
Isoenzymes of glutamine synthetase in rat tissues. By M. P. GONZALEZ and J. H. OTTAWAY	35 P
The development of hypoxanthine/guanine phosphoribosyltransferase activity in man. By A. ADAMS, J. M. ANDERSON, A. D. NICOL and R. A. HARKNESS	36 P
The effect of starvation on the cholinesterase activity of the liver and serum of young male rats. By A. R. HENDERSON, I. HAMILTON and J. KING	36 P
The effect of feeding on the apparent kinetic constants and activation energy of the magnesium ion-activated deoxyribonucleic acid-dependent ribonucleic acid polymerase of rat liver. By C. A. SPENCER and A. R. HENDERSON	37 P
Stimulation of the release of unesterified fatty acids in synaptosomes by noradrenaline and 5-hydroxytryptamine. By C. J. PRICE and C. E. ROWE	38 P
Synthesis of fatty acids from [1- ¹⁴ C]acetyl-coenzyme A in subcellular particles of rat epididymal adipose tissue. By H. KANOH and D. B. LINDSAY	38 P
Incorporation of acetate into β -hydroxy- β -methylglutaryl-coenzyme A by rat liver microsomal fraction: the effect of feeding with cholesterol. By K. S. SHEPHERD and R. BOOTH	39 P
The effect of development on the gangliosides of rat brain. By J. W. T. DICKERSON and A. MERAT	40 P
The effect of development on the gangliosides of pig brain. By J. W. T. DICKERSON, A. MERAT and E. M. WIDDOWSON	40 P
Compartmental analysis of the distribution of cholesterol in the isolated perfused rat liver. By L. B. ROBERTS and I. W. PERCY-ROBB	41 P
Optical-rotary-dispersion studies of steroid molecules in liposomes and erythrocyte membranes. By J. R. GREEN, P. A. EDWARDS and C. GREEN	41 P
Aggregated states of chromatophore membrane protein from <i>Rhodospseudomonas spheroides</i> . By L. S. ENGLISH, D. N. LEES and L. J. ROGERS	42 P
Inhibition of photosynthetic electron transport by 1,1,1-trichloro-2,2-bis-(<i>p</i> -chlorophenyl)ethane (DDT) at a site in the intermediate electron-transport chain. By W. J. OWEN and L. J. ROGERS	43 P
Occurrence of histones in the trypanosomatid flagellate <i>Crithidia oncopelti</i> . By J. L. LEAVER and G. RAMPONI	44 P
Normalization factors in the fitting of exponential curves to results obtained in isotopic-tracer studies. By J. H. OTTAWAY	44 P
Inhibition by salicylate of porcine lactate dehydrogenase isoenzyme 5. By R. M. CHESHIRE and M. V. PARK	45 P
Liver perfusion with a closed gas circuit. By J. COCHRANE, J. S. CHAHL and J. H. OTTAWAY	45 P
Evidence for an atypical binding of haem in a protozoan cytochrome. By G. PETTIGREW and T. MEYER	46 P
The metabolism <i>in vitro</i> of [ureyl- ¹⁴ C]tolbutamide by microsomal preparations from rat and human liver. By F. J. DARBY and D. A. P. EVANS	46 P
Steroid hydroperoxides as intermediates in steroid biogenesis. By J. E. VAN LIER and G. KAN	47 P

PAPERS ACCEPTED FOR PUBLICATION

- Control of leghaemoglobin synthesis in snake beans. By W. J. BROUGHTON and M. J. DILWORTH
- The effects of glycols on the renaturation of soluble collagen. By D. R. COOPER, A. E. RUSSELL and G. J. HART
- The formation of glycoproteins in tissues of higher plants. Specific labelling with D-[1-¹⁴C]glucosamine. By R. M. ROBERTS, A. B. CONNOR and J. J. CETORELLI
- Isolation of peptides containing nitrotyrosine by using an insoluble antibody column. By M. HELMAN and D. GIVOL
- Properties of Lubrol-extracted uridine diphosphate glucuronyltransferase. By R. D. HOWLAND, A. BURKHALTER, A. J. TREVOR, S. HAGEMAN and D. Y. SHIRACHI
- Occurrence of long-chain fatty acids and glycolipids in the cell envelope fractions of baker's yeast. By T. NURMINEN and H. SUOMALAINEN
- Degradation of heparin in mouse mastocytoma tissue. By S. ÖGREN and U. LINDAHL
- Glycoprotein of the wall of sycamore tissue-culture cells. By M. F. HEATH and D. H. NORTHCOTE
- Effect of a modified separation procedure on the size and protein-synthetic activity of membrane-bound liver polyribosomes. By G. RAGNOTTI
- Glucose and fructose metabolism in *Zymomonas anaerobia*. By D. J. MCGILL and E. A. DAWES
- The metabolism of glucose 6-phosphate by mammalian cerebral cortex *in vitro*. By P. R. DODD, H. F. BRADFORD and E. B. CHAIN
- An assessment of methanolysis and other factors used in the analysis of carbohydrate-containing materials. By R. E. CHAMBERS and J. R. CLAMP
- The isolation and functional identification of a protein from the human erythrocyte 'ghost'. By M. J. A. TANNER and W. R. GRAY
- Differential-sedimentation-velocity and gel-filtration measurements on human apo- and iron-transferrins. By P. A. CHARLWOOD
- The proteins of *Xenopus* ovary ribosomes. By P. J. FORD
- Influence of glucagon, 6-N,2'-O-dibutyryl-adenosine 3':5'-cyclic monophosphate and triamcinolone on the arginine synthetase system in perinatal rat liver. By A. L. SCHWARTZ
- The reactivity and function of thiol groups in trout actin. By J. BRIDGEN
- The purification and some properties of 3-hydroxy-3-methylglutaryl-coenzyme A synthase from baker's yeast. By B. MIDDLETON and P. K. TUBBS
- The kinetic mechanism of 3-hydroxy-3-methylglutaryl-coenzyme A synthase from baker's yeast. By B. MIDDLETON
- Control of the redox state of the nicotinamide-adenine dinucleotide couple in rat liver cytoplasm. By M. STUBBS, R. L. VEECH and H. A. KREBS

NOTES FOR CONTRIBUTORS

It is the policy of the *Biochemical Journal* to publish papers in English in all fields of biochemistry, provided that they make a sufficient contribution to biochemical knowledge. Papers may include new results obtained experimentally, descriptions of new experimental methods of biochemical importance, or new interpretations of existing results. All work presented should have as its aim the development of biochemical concepts rather than the mere recording of facts. Theoretical contributions will be considered equally with papers dealing with experimental work. Preliminary or inconclusive experiments should not generally be described.

For detailed instructions on the preparation of papers contributors should refer to *Policy of the Journal and Instructions to Authors* [*Biochem. J.* (1971), **121**, 1] (obtainable from the Executive Secretary, The Biochemical Society, 7 Warwick Court, London WC1R 5DP, price 15p. post free). In general the *Biochemical Journal* uses the recommended SI (Système Internationale) symbols [see *Symbols, Signs and Abbreviations Recommended for British Scientific Publications* (1969) (London: The Royal Society)]. For biochemical nomenclature authors should as far as possible follow the Tentative Rules and Proposals of the IUPAC-IUB Commission on Biochemical Nomenclature [see *Biochem. J.* (1971), **121**, 11]. For chemical nomenclature the IUPAC Rules should be followed [see *Biochem. J.* (1971), **121**, 11]. The *Biochemical Journal* uses as a standard of spelling the *Concise Oxford Dictionary of Current English* (Oxford: Clarendon Press).

Two types of paper are accepted by the editors: **Full-length papers.** Papers submitted for publication should be sent together with an extra copy of the synopsis to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London WC1R 5DP. Typescripts should bear the name and address of the person to whom the proof of the paper is to be sent.

Papers submitted should be written concisely. Typescripts that are not concise or do not conform to the conventions of the *Biochemical Journal* will be returned to the authors for revision. If a paper that has been returned to an author for revision is not resubmitted within one month, it will, on resubmission, be deemed to be a new paper and the date

of receipt altered accordingly. A revised paper containing a significant amount of new material will also be redated.

Submission of a paper to the Editorial Board implies that it reports unpublished work, that it is not under consideration for publication elsewhere, and that if accepted for the *Biochemical Journal* it will not be published elsewhere in the same form, either in English or in any other language, without the consent of the Editorial Board.

Papers should be headed by a concise but informative title, by the names of the authors and by the name and address of the establishment where the work was performed. Details of financial support may appear in the acknowledgements at the end of the paper.

Before preparing papers authors should consult a current issue of the Journal to make themselves familiar with the general format, such as the use of cross-headings, lay-out of tables and citation of references. Papers should be in double-spaced typing throughout (including references and legends of tables and figures) on sheets of uniform size with wide margins. The top copy should be submitted. It cannot be overemphasized that the need for revision of badly prepared typescripts inevitably leads to delays in publication.

Papers on specialized subjects should be presented so that they are intelligible to the ordinary reader of the Journal. Sufficient information must be included to permit repetition of the experimental work.

Short Communications. Typescripts should be submitted *in duplicate*, written in English, and conform strictly to the form of the Journal as far as spelling and abbreviations are concerned. Such communications must not exceed 1200 words of text, but in addition may include either one table, typed on a separate sheet, or one figure, drawn according to the rules of the Journal. If no figure or table is included the text may be expanded to 1400 words. Communications should be addressed to the Editorial Secretary, The Biochemical Journal, 7 Warwick Court, London WC1R 5DP. Papers should be complete in themselves: (1) the methods used in experimental work must be adequately described or sufficient references given to allow repetition of the work (2) sufficient indication of the results of experimental work must be included to justify the claims made.
