No. 40  THE METABOLISM AND FUNCTION OF GLYCOPROTEINS
Edited by R. M. S. SMELLIE and J. G. BEELEY
1974 189 pp. £7.00 ($17.50)

This volume records the proceedings of a symposium held in University College London in April 1974. Each of the ten papers is by an international authority and presents a survey of recent progress in certain aspects of the study of glycoproteins. Topics include methods of analysis, the nature of the carbohydrate–peptide linkage, heterogeneity of glycoproteins, sites of glycoylation, assembly of the carbohydrate moieties, immunoglobulin synthesis, sialic acid modifications, the role of sialic acid and the structure of blood-group-specific glycoproteins in normal and transformed cells.

SYMPOSIA No. 41

BIOCHEMICAL ADAPTATION TO ENVIRONMENTAL CHANGE

Edited by R. M. S. Smellie and J. F. Pennock

240 pp. (ISBN 0 904498 01 8) £10.00 (U.S. $20.00)

As biochemists have become more interested in the pathways of metabolism and mechanisms of control in a wider range of living systems, it has become apparent that, although there are many features in common to organisms inhabiting different environments, a variety of adaptations or refinements has been necessary so as to enable particular species to perform efficiently under the widely differing and often rapidly changing conditions to which they are exposed. Some of the more fully documented examples of these adaptations, including modifications in enzyme structure, function and activity, alteration in membrane lipids and performance and the substitution of one class of carrier molecule by another, are discussed in this volume.

List of contents and authors:

Chairman’s Introduction by C. J. Duncan.

Design of Metabolic and Enzymic Machinery to Fit Lifestyle and Environment by P. W. Hochachka.

Temperature: A ‘Shaping Force’ in Protein Evolution by G. N. Somero and P. S. Low.

Temperature Adaptation in Fish by M. W. Smith.

Substrate Cycles in Metabolic Regulation and in Heat Generation by E. A. Newsholme and B. Crabtree.

Biochemical Adaptations for Flight in the Insect by B. Sacktor.

Facultative Anaerobiosis in Molluscs by A. de Zwaan, J. H. F. M. Kluytmans and D. I. Zandee.

Metabolic Consequences of Submersion Asphyxia in Mammals and Birds by A. S. Blix.

Adaptations with Respect to Salinity by E. Schoffeniels.

Adaptations of Enzymes for Regulation of Catalytic Function by D. E. Atkinson.

CONTENTS

The mechanism for small-bowel adaptation in lactating rats. By ELWYN ELIAS and R. H. DOWLING

The influence of orthophosphate on the renal handling of inorganic pyrophosphate in man and dog. By R. G. G. RUSSELL, SYLVIA BISAZ and H. FLEISCH

Regulation of the human pyruvate dehydrogenase complex. By D. STANBIE

Neural factors contributing to renin release during reduction in renal perfusion pressure and blood flow in cats. By A. STELLA, F. CALARESU and A. ZANCHETTI

The metabolism in vivo and in vitro of plasma low-density lipoprotein from a subject with inherited hypercholesterolaemia. By N. B. MYANT, D. REICHL, G. R. THOMPSON, M. J. P. HIGGINS and D. J. GALTON

Skin collagen in idiopathic adolescent scoliosis and Marfan's syndrome. M. J. O. FRANCIS, M. C. SANDERSON and R. SMITH

Inverse relationship in Jamaica between plasma high-density lipoprotein cholesterol concentration and coronary-disease risk as predicted by multiple risk-factor status. By G. J. MILLER, N. E. MILLER and M. T. ASHCROFT

Plasma cadmium and zinc in human hypertension. By G. S. THIND and GRACE M. FISCHER

Changes in cardiac and hepatic glucocorticoid receptors after adrenalectomy. By M. C. GREGORY, D. DUVAL and P. MEYER

Carbon monoxide in alveolar air as an index of exposure to cigarette smoke. By R. G. RAWBONE, CATHERINE A. COPPIN and A. GUZ

Effect of acupuncture on bronchial asthma. By D. Y. C. YU and S. P. LEE

SHORT COMMUNICATION

A simple method for the differential measurement of $^{125}$I and $^3$H by liquid-scintillation spectrometry

Subscription: £2.75 ($3.50) per part; £28.00 ($100.00) per year.
Orders may be placed with your bookseller, or sent direct to the publishers.

BOC-ON:
New amino-protecting reagent

Aldrich’s nonexplosive replacement for t-BOC azide

\[ \text{CH}_3\text{O} \\text{CN} \]
\[ \text{CH}_2\text{C-O-C-ON=C-CN} \]

BOC-ON [2-(t-butoxycarbonyloxyimino)-2-phenylacetonitrile] shows promise of becoming the reagent of choice for t-butoxycarbonylation of amino groups, affording contaminant-free t-BOC-amino acids in high yield (see Table 1). BOC-ON is highly reactive, the carbonylation reaction being complete in 4-5 hours at room temperature. In contrast, 2-t-butoxycarbonylthio-4,6-dimethylpyrimidine, another t-butoxycarbonylating reagent, generally requires 20 hours for reaction completion while t-BOC azide sometimes requires a temperature of 50-60°. The latter is particularly disadvantageous considering that t-BOC azide may decompose with detonation above 80°. Moreover, t-BOC azide is a liquid whose vapors cause severe headaches and heart palpitations, whereas BOC-ON is crystalline.

The by-product, 2-hydroxymino-2-phenylacetoneitrile, is removed by extraction into ether, benzene, or ethyl acetate, and the t-BOC-amino acid is extracted from the aqueous layer with ethyl acetate after acidification with 5% citric acid.

BOC-ON is very soluble in ethyl acetate, ether, benzene, chloroform, dioxane, and acetone. It is soluble in methanol, isopropanol, and t-butanol, and insoluble in petroleum ether and water. It should be stored in a brown bottle at -20° C to prolong its shelf-life. It undergoes gradual decomposition with evolution of carbon dioxide after several weeks at room temperature.

A detailed data sheet on BOC-ON is available on request.

Reference:

19,337-2 BOC-ON 5g $8.00; 25g $30.00; 100g $80.00
