BIOLOGICAL MAGNETIC RESONANCE
Volume 1
edited by Lawrence J. Berliner, Ohio State University
and Jacques Reuben, University of Houston, Texas

Providing essential knowledge for evaluating the literature and planning experiments, this volume examines NMR studies of histones, studies of sodium-23 and potassium-39 in biological systems, PMR studies of tRNA in solution, fluorine magnetic resonance in biochemistry, and ESR and copper in various systems. approx. 340 pp., illus., 1978, $42.00/£22.05

BIOSYNTHETIC PRODUCTS FOR CANCER CHEMOTHERAPY
by George R. Pettit, Arizona State University
Gordon M. Cragg, University of Cape Town, South Africa
and Richard H. Ode, Arizona State University

Provides a current overview of cancer chemotherapy and the development of specialized drugs of biosynthetic origin for cancer treatment.
Volume 1: 228 pp., illus., 1977, $23.40/£12.29
Volume 2: 160 pp., illus., 1978, $35.40/£18.59
Volume 3: approx. 180 pp., illus., 1978, $39.00/£20.48

BIOCHEMISTRY AND PHARMACOLOGY OF ETHANOL
edited by Edward Majchrowicz and Ernest P. Noble
National Institute on Alcohol Abuse and Alcoholism

Thoroughly examining the actions of ethanol at all levels of biological organization, this treatise covers absorption and distribution of ethanol, enzymatic mechanisms of elimination, effects on intermediary metabolism of tissues and organs, pathological changes of acute and chronic ethanol administration, and its interaction with drugs, neurotransmitters, and hormones.
Volume 1: approx. 570 pp., illus., 1979, $57.00/£29.93
Volume 2: approx. 480 pp., illus., 1979, $51.00/£26.78

BIOLOGICAL REGULATION AND DEVELOPMENT
Volume 1: Gene Expression
edited by Robert Goldberger, National Cancer Institute

Stressing broad concepts in regulation rather than details of particular systems, the first volume in this new series examines mechanisms of regulation in microorganisms, including strategies of genetic regulation, complex operons and overlapping genes, autogenous regulation, and interactions of regulatory proteins with the genome. approx. 655 pp., illus., 1978, $47.40/£24.89

The Receptors
A Comprehensive Treatise
Volume 1: General Principles and Procedures
edited by R. D. O'Brien, Cornell University

The first volume in a new series designed to provide a comprehensive reference source on receptors, this book examines general principles and procedures which have applicability to a wide spectrum of receptor systems. approx. 415 pp., illus., 1979, $35.40/£18.59

VOLUME 3

ESSAYS IN MEDICAL BIOCHEMISTRY

Edited by V. MARKS and C. N. HALES

152 pp. £4.50 (US $9.00) by surface mail to overseas addresses

This volume presents in an attractive and readable form four biochemical topics of current medical interest. Hormones feature in articles on folate and B₁₂ interaction, and the role of the alimentary tract as an endocrine organ. Growing knowledge of proteins secreted by tumours is presented by Dr. I. Chanarin, and Dr. J. B. Holton discusses the value and risks of tests based on amniocentesis. The contributors clearly point out the limits of present knowledge and the scope for further development.

List of Contents and Authors:

Preface

Folates, Cobalamins and their Interrelationship in Man
  By I. Chanarin

Tumour Markers
  By K. D. Bagshawe and F. Searle

Diagnostic Tests on Amniotic Fluid
  By J. B. Holton

The Gastrointestinal Hormones with Particular Reference to their Role in Regulation of Insulin Excretion
  By V. Marks and D. S. Turner

Still Available:

VOLUME 1  131 pp. £2.00 (US $5.00)
VOLUME 2  187 pp. £4.00 (US $8.00)

A potent phosphodiesterase inhibitor

IBMX was found to stimulate the conversion of glycogen phosphorylase from the $a$ to the $b$ form in rat cuateus muscle slices.¹⁶

In studies on the relationship between cyclic AMP and allergic histamine release, it was found that IBMX markedly potentiated histamine release.¹⁷,¹⁸

It has been demonstrated that IBMX selectively inhibits cyclic GMP-associated PDE over PDE associated with cyclic AMP.¹⁹,²⁰

IBMX has been used as an internal standard in the determination of theophylline by electron-capture GC.²¹
