PLASMA PROTEINS
edited by B. Blombäck, Institution for Coagulation Research, Karolinska Institute, Stockholm, and L.A. Hanson, Department of Immunology, Institute for Medical Microbiology, University of Gothenburg, Sweden.
This book provides a survey for the developments in the field of the chemistry of the plasma proteins. The biochemistry, physiology and clinical aspects of the more important proteins are discussed in special chapters. A detailed and up-to-date section at the end of the book is devoted to laboratory diagnosis in connection with the plasma proteins. The various methods which are available are described together with their value and usefulness in diagnosis and clinical application.

TOPICS IN CARBON-13 NMR SPECTROSCOPY Vol. 3
edited by G.C. Levy, The Florida State University, Tallahassee.
A chronicle of recent advances in Carbon-13 NMR theory and methodology covering a wide range of interests, from molecular biology to polymer physics, from molecular dynamics to organic structure analysis. It bridges the gap between current research literature and available T3C NMR texts and reviews. (Series: Topics in Carbon-13 NMR Spectroscopy)

PORPHYRIN CHEMISTRY ADVANCES
edited by F.R. Longo, Drexel University, Philadelphia.
New porphyrin chemistry research and chemical, biochemical, and clinical chemistry are covered with contributions from over fifty leading international scientists. Each chapter reviews an area of porphyrin research and presents recent experimental findings.

HORMONE CHEMISTRY 2nd Ed., Vol. 2: Steroids, Thyroid Hormones, Biogenic Amines and Prostaglandins
by W.R. Butt, Director of Laboratory of Clinical Endocrinology, The Birmingham and Midland Hospital for Women.
Vol. 2 completes the new revised edition of HORMONE CHEMISTRY. The work offers an up-to-date survey of a wide range of hormones, each given a separate chapter, each remarkable for its concise yet wide ranging information: containing for example, accounts of chemistry and/or biochemistry; mode of action; synthesis; methods of detection, separation, extraction and determination; clinical applications, etc. For guidance of readers needing more specialist knowledge, references are as wide as possible.
All the chapters have been completely rewritten and considerably expanded to reflect progress made in the decade following the first edition.

BURGER'S MEDICINAL CHEMISTRY 4th Ed. Part 2
by M.E. Wolff, University of California.
This groups broad therapeutic classes into contiguous chapters and describes in detail the various types of drugs used in chemotherapy: antimicrobial, antifungal, anti-neoplastic, antiviral, antiparasitic and the hormonal drugs. It outlines the biochemical rationale, structure-function relationships and the metabolism of the drugs under discussion. The book is profusely illustrated with structural formulae and provides many pertinent references.

SUBSTITUENT CONSTANTS FOR CORRELATION ANALYSIS IN CHEMISTRY AND BIOLOGY
by C. Hensch and A. Leo, both of Pomona College, Claremont, California.
A comprehensive listing of parameters of proven value for the correlation of structure with chemical or biologic reactivity. It presents two tables — one of P values and the other of substituent parameters and lists all new measured values reported. It explains how each of the commonly used parameters was derived and under what circumstances it can be expected to provide a quantitative measure of its particular effect. It includes references for more esoteric types of interests.

FUNCTION AND MOLECULAR ASPECTS OF BIOMEMBRANE TRANSPORT

Proceedings of the International Symposium on Function and Molecular Aspects of Biomembrane Transport held in Selva di Fasano, Italy on 23rd - 27th April 1979

edited by E. QUAGLIARIELLO, F. PALMIERI, S. PAPA and M. KLINKENBERG

DEVELOPMENTS IN BIOENERGETICS AND BIOMEMBRANES Volume 3

In recent years the vast field of biomembrane transport has made great strides towards a better understanding of its mechanisms by the molecular approach. More transport systems are being defined in terms of their catalysts, pumping systems and carriers and this volume represents a comprehensive and up-to-date record of the biochemical aspects of biomembrane transport.

We still supply the best…

By 1959 — Amersham had supplied $^{14}$C-amino-acids in aqueous solutions that
- contained 2% ethanol to reduce radiolysis
- was sterilised to minimise microbiological decomposition
  This is the most convenient, easily-used formulation as no neutralization is required and lyophilization, when required, is quick and simple

By 1969 — we had a complete range of very high specific activity (U-$^{14}$C) L-amino-acids. These are still the hottest available.

By 1979 — our extensive use of HPLC for purification and analysis ensures the highest purities

STEROID REFERENCE COLLECTION

A large collection of steroids for use as reference standards is maintained with support from the U.K. Medical Research Council and the U.S. National Institute of Arthritis and Metabolic Diseases, N.I.H., and many individual donors of samples. Milligram or microgram quantities of steroids, including steroid hormones and their metabolites, are available free of charge for use in clinical or biochemical studies, such as the identification of unknown steroids, the development and standardization of microassay techniques, chromatography, mass spectrometry etc. A Collection of bile acids and related compounds is also being established. The Collection’s team of chemists offers advice and assistance, where possible, in chemical problems involving steroids, and an N.M.R. service ($^1$H and $^{13}$C) to help in the identification of steroids.

Enquiries, requests for detailed information and a list of available steroids, or offers of samples for the Collection, should be addressed to:

Professor D. N. Kirk,
Curator of the Steroid Reference Collection,
Chemistry Department,
Westfield College,
Hampstead,
London, NW3 7ST

Workers in the U.S.A., however, are asked to address enquiries or requests to Dr. D. F. Johnson,
Building 4, Room 141, National Institutes of Health, Bethesda, Maryland 20014, U.S.A.

At the centre of carbohydrate metabolism there is the TCA cycle

at the centre of metabolic research there is

Boehringer Mannheim

With over 600 top quality Biochemical Reagents now listed in the 1978/79 catalogue, most requirements in this field can be satisfied from our catalogue. Among the most recent additions you will find G6P-DH, HK and GLDH now available in stable lyophilised forms for use where the addition of ammonium ions is to be avoided.

New introductions are a regular event due to continuing research by our scientific teams in Tutzing, West Germany. One result has been major improvements in the production techniques of pyridine cofactors setting new standards of purity, performance, stability and economy - to give you even more reliable reagents.

Order your Biochemical Reagents from B.C.L. - Our quality is matched by our return-of-post service.
