## **PROGRESS IN DRUG METABOLISM Vol. 3**

edited by **J.W. Bridges**, Director, Institute of Environmental Health and Safety, University of Surrey, and **L.F. Chasseaud**, Head of Metabolism and Pharmacokinetics, Huntingdon Research Centre

This is a review series intended to provide comprehensive, authoritative, readable, up-to-date and critical accounts by experts on the biological fate of a drug or xenobiotic in terms of absorption, distribution, transformation and excretion. The reviews are concerned with newer developments or progress in established areas, or they may retrieve and review the widely disseminated literature on a particular subject with the aim of keeping the reader more easily informed on the many and varied developments in drug metabolism studies. Further volumes in this series are planned.

July 1979 382 pages

## **BIOCHEMISTRY OF ALCOHOL AND ALCOHOLISM**

by **L.J. Kricka** and **P.M.S. Clark**, Department of Clinical Chemistry, University of Birmingham

This up-to-date survey of biochemical effects of alcohol on humans covers clinical aspects and the impact of alcohol on physiological chemistry as encountered by practising clinicians and biochemists. The book's main feature is the restriction of its relevance solely to the impact of alcohol on the chemistry of the human body, not yet covered in any known published book.

The main part of the work reviews biochemical effects of alcohol ingestion in man, and there is important coverage also of alcohol metabolism and of the range of consequent biochemical abnormalities.

## **GUIDE TO BASIC INFORMATION SOURCES IN CHEMISTRY**

by **A. Antony**, University of California, Santa Barbara

An examination of the techniques and tools available for finding chemical information. It emphasizes pure chemistry, although some reference materials are included in related areas such as biochemistry and chemical engineering, as well as in applications to environmental concerns, industry, etc. Apart from the language dictionaries, the guide is limited to works in Roman alphabet languages, focusing on those in English. Bibliographic searching by computer and chemistry information search strategies are discussed. (*Information Resources Series*)

## **CELL POPULATIONS**

Editor: **E. Reid**, Director, Wolfson Bioanalytical Centre, University of Surrey

This desk guide to new and established methods of isolating cell populations from tissues or other heterogeneous biological sources surveys techniques for obtaining homogeneous samples of healthy cells from mammalian tissues, and from protozoan and other free-living cells. It also offers guidance on the choice of the most suitable methods. The range of techniques covered includes sedimentation, isopycnic banding, elutriation, partition between two aqueous phases, and free-flow electrophoresis. It is an authoritative coverage of the field by an international team of experts, first presented at a Subcellular Methodology Forum held at the University of Surrey in 1978. There is no such wide-ranging survey of its size known to be available. Series: *Methodological Surveys (Series B: Biochemistry)* Vol. 8

In Press approx. 256 pages  
085312 120 6 approx. \$42.55/£18.50

Published by Ellis Horwood Ltd., Chichester, and distributed by John Wiley & Sons Ltd.

## **PLANT ORGANELLES**

Editor: **E. Reid**, Director, Wolfson Bioanalytical Centre, University of Surrey

This comprehensive and critical survey of known methods of the isolation of organelles and membrane material from plant tissue also emphasizes the advances in the field.

The book first considers methods for isolating bioenergetic organelles, and then presents current views on vacuoles and microbodies. There is consideration of membranous components and nuclei, and of constituents such as glucan synthetases and phytochrome, with attention to lectins, auxin binding and glycosyl transferases. The critical collation of current thinking on markers for characterizing subcellular fractions concludes this outcome of a Subcellular Methodology Forum held at the University of Surrey in 1978.

Series: *Methodological Surveys (Series B: Biochemistry)* Vol. 9

## Our new Lysate is out on its own—but is backed by 80 labelled amino-acids

With Amersham's new reticulocyte lysate you just add the labelled amino-acid of your choice and mRNA and incubate. The lysate has been nuclease treated\* to remove endogenous mRNA and has been optimised for immediate and convenient use. Each batch is tested for high protein synthesis activity with low background and is available from stock.

Our new lysate is backed by a comprehensive range of about 80 amino-acids labelled with  $^3\text{H}$ ,  $^{35}\text{S}$  and  $^{14}\text{C}$ , including our very widely used L-[ $^{35}\text{S}$ ]methionine. All are produced to the same high standards of purity.

On its own our new lysate gives you quality, convenience and flexibility.

Together with our range of labelled amino-acids it gives you a complete, high quality translation package you can rely on for protein synthesis.

\* based on the method of Pelham, H.R.B. and Jackson, R.S. *Eur. J. Biochem.*, **67**, 247-257, 1976.

# BIOCHEMICAL NOMENCLATURE

AND

## RELATED DOCUMENTS

This compendium, previously published under the title of *Collected Tentative Rules and Recommendations of the Commission on Biochemical Nomenclature* has now been updated and published in its third edition for the International Union of Biochemistry by the Biochemical Society under the title: *Biochemical Nomenclature and Related Documents*.

The compendium, prepared by the IUB Committee of Editors of Biochemical Journals, collects together all the current rules and recommendations on nomenclature that have emanated from the IUPAC-IUB and IUB nomenclature committees. As such it is an indispensable part of the library of all biochemists.

The price is £3.50/US\$7.00, postage-paid (vi plus 223 pages, paper bound). A 20% discount is allowable on orders for 10 or more copies to a single address. Payment must accompany the order.

Order from The Biochemical Society Book Depot, P.O. Box 32, Commerce Way, Colchester CO2 8HP Essex, U.K.

L. supplement

- With over 600 top quality Biochemical Reagents now listed in the 1978/79 catalogue, most requirements in this field can be satisfied from our catalogue. Among the most recent additions you will find G6P-DH, HK and GLDH now available in stable lyophilised forms for use where the addition of ammonium ions is to be avoided.
- New introductions are a regular event due to continuing research by our scientific teams in Tutzing, West Germany. One result has been major improvements in the production techniques of pyridine cofactors setting new standards of purity, performance, stability and economy – to give you even more reliable reagents.

Order your Biochemical Reagents from B.C.L. – Our quality is matched by our return-of-post service.
