BIOSCIENCE REPORTS
Communications and Reviews in Molecular and Cellular Biology

Published by The Biochemical Society

BIOSCIENCE REPORTS is a new international monthly journal devoted to the rapid publication of high-quality papers that advance new concepts in the areas of molecular and cellular biology. Review articles and other topical material will be included from time to time.

Hon. Advisory Editors: A. KORNBERG
R. R. PORTER

Call for Papers
Short reports of original research, of sufficient interest and significance to justify rapid publication, in all areas of biochemistry can be submitted directly to any member of the Board of Editors. Publication will be within approximately 2 months of receipt. Instructions to authors for Bioscience Reports with the addresses of all Editors are available from The Biochemical Society, 7 Warwick Court, London WC1R 5DP.

ATP-CLS
(Constant Light Signal) Test Combination for the measurement of ATP consuming or producing reactions. Limit of sensitivity $2 \times 5 \times 10^{-10}$ mol/l.

ATP-HS
(High Sensitivity) This Test Pack contains extremely pure reagents with ultra low residual ATP content which gives you high sensitivity down to $5 \times 10^{-10}$ mol/l.

NAD(P)H
Test Combination for the measurement of NAD(P)H by the photobacterium luciferase method in the range $10^{-7}$ to $10^{-9}$ mol/l.

Each Test Pack contains performance tested reagents which are ready to use. You can therefore execute the test quickly, easily and without reagent wastage.
