

A Biologist's Guide to Principles and Techniques of Practical Biochemistry

Second Edition

Edited by Bryan L. Williams and Keith Wilson

This book aims to make biology students aware of the principles and methodology of those analytical techniques which are fundamental to the development of our understanding of cellular and subcellular processes. The second edition has been revised to include new techniques, in particular a new chapter on immunochemical techniques, and certain out-dated techniques have been deleted.

BIOCHEMICAL NOMENCLATURE

AND

RELATED DOCUMENTS

This compendium, previously published under the title of *Collected Tentative Rules and Recommendations of the Commission on Biochemical Nomenclature* has now been updated and published in its third edition for the International Union of Biochemistry by the Biochemical Society under the title: *Biochemical Nomenclature and Related Documents*.

The compendium, prepared by the IUB Committee of Editors of Biochemical Journals, collects together all the current rules and recommendations on nomenclature that have emanated from the IUPAC-IUB and IUB nomenclature committees. As such it is an indispensable part of the library of all biochemists.

The price is £3.50/US\$7.00, postage-paid (vi plus 223 pages, paper bound). A 20% discount is allowable on orders for 10 or more copies to a single address. Payment must accompany the order.

Order from The Biochemical Society Book Depot, P.O. Box 32, Commerce Way, Colchester CO2 8HP Essex, U.K.

ANNOUNCEMENT

STERIOD REFERENCE COLLECTION

The Steroid Reference Collection, which is maintained by the U.K. Medical Research Council and the U.S. National Institute of Arthritis and Metabolic Diseases, N.I.H., provides milligram or microgram samples of reference steroids free of charge for use in clinical or biochemical studies, including the development and standardization of micro-assays, chromatography, and mass spectrometry. The Collection also offers assistance with chemical problems involving steroids, and an n.m.r. service (^1H and ^{13}C) for the identification of steroids.

Recent donations of samples from eminent scientists and from the pharmaceutical industry, as well as syntheses in our laboratories, have expanded the Collection to over 4000 different compounds, including steroid hormones and their metabolites, sterols, bile acids, and commercial synthetic analogues of the steroid hormones.

Enquiries, requests for information, lists of available steroids, or offers of samples for the Collection, should be addressed to:

Professor D. N. Kirk,
Curator of the Steroid Reference Collection,
Chemistry Department,
Westfield College,
Hampstead,
London, NW3 7ST

Workers in the U.S.A., however, are asked to address enquiries or requests to: **Dr. D. F. Johnson, Building 4, Room 141, National Institutes of Health, Bethesda, Maryland 20014, U.S.A.**

BIOSCIENCE REPORTS

Communications and Reviews in Molecular and Cellular Biology

Published by The Biochemical Society

BIOSCIENCE REPORTS is a new international monthly journal devoted to the rapid publication of high-quality papers that advance new concepts in the areas of molecular and cellular biology. Review articles and other topical material will be included from time to time.

Hon. Advisory Editors:

A. KORNBERG
R. R. PORTER
F. SANGER

Board of Editors: Chairman: C. A. PASTERNAK (U.K.)
Deputy Chairman: K. A. PIEZ (U.S.A.)

R. A. BRADSHAW (U.S.A.)
W. J. BRAMMAR (U.K.)
G. H. DIXON (Canada)
R. F. DOOLITTLE (U.S.A.)
A. A. EDDY (U.K.)
D. M. ENGELMAN (U.S.A.)
J. R. GRIFFITHS (U.K.)
F. W. HEMMING (U.K.)
H.-D. KLENK (Germany)

E. LAZARIDES (U.S.A.)
W. J. LENNARZ (U.S.A.)
H. J. MÜLLER-EBERHARD (U.S.A.)
V. MUTT (Sweden)
A. PETERKOFISKY (U.S.A.)
P.-P. SLONIMSKI (France)
R. J. P. WILLIAMS (U.K.)
A. R. WILLIAMSON (U.K.)

Publication Details

ISSN 0144-8463

Monthly, starting January 1981. There will be one volume per year.

Subscription Rate

1 year	£85.00	US\$191.00
Per part	£8.00	US\$ 18.00

Despatched by Air Mail

Call for Papers

Short reports of original research, of sufficient interest and significance to justify rapid publication, in all areas of biochemistry can be submitted directly to any member of the Board of Editors. Publication will be within approximately 2 months of receipt. Instructions to authors for *Bioscience Reports* with the addresses of all Editors are available from The Biochemical Society, 7 Warwick Court, London WC1R 5DP.

Potent Inhibitor of Nucleoside Transport

NBMPR: Cancer Research Tool

It has been shown that transport is the key step in the rate at which exogenous nucleosides are incorporated into nucleic acids in cultured cells,^{1,2} and that the ability of cancer cells to use exogenous nucleoside is hindered by inhibition of uptake.³ It has also been postulated that such transport might be the rate-limiting step at which certain neoplastic cells respond to chemotherapeutic drugs.³ Consequently, studies have been undertaken on the effect of nucleoside transport inhibition on the proliferation of cultured cells dependent on extracellular nucleoside.

S-(*p*-Nitrobenzyl)-6-thioinosine [*S*-(*p*-Nitrobenzyl)-6-mercaptapurine riboside, NBMPR] is one of the most potent of a class of *S*-substituted 6-thioinosine derivatives possessing inhibitory activity on nucleoside transport systems in various animal cells in culture, for example, human,⁴⁻⁸ sheep⁹ and mouse⁸ erythrocytes, Chinese hamster cells,^{5,10,11} and pig aorta endothelial cells.¹² NBMPR binds firmly but reversibly to cells, thus serving as a high-affinity probe in studying the properties and kinetic characteristics of nucleoside permeation.

Similar inhibitory effects were obtained on interaction of NBMPR with the nucleoside-binding sites of proliferating L5178Y murine lymphoma,³ HeLa,¹³⁻¹⁷ and P388 leukemia³ cells in culture.

Thus, NBMPR was shown to inhibit uptake of adenosine,^{8,10,12-15} cytidine,¹³ guanosine,^{13,14} inosine,¹³ thymidine,^{13,14,16,17} and uridine¹³ in cultured cells.

The high-affinity binding capability of NBMPR

makes it a useful probe for nucleoside transport systems and a useful tool in cancer research involving nucleoside uptake in tumor-cell replication.
