Mobility and Migration of Biological Molecules

Edited by P. B. GARLAND and R. J. P. WILLIAMS

Mobility and Migration of Biological Molecules was the title of the Biochemical Society’s Forty-sixth Symposium held in London in December 1980. The fifteen papers presented by leading biochemists involved in research studies of molecular movement are now published in this book. In particular, the aspects of intramolecular movements of proteins, movements of ions and reaction intermediates in proteins (including the structure and function of ion channels), rotational and lateral movements in biomembranes and movements of proteins across membranes are discussed in detail. Mobility and Migration of Biological Molecules offers the specialist a valuable review of the existing state of knowledge and useful signposts for the directions further research must take.

Writing a Scientific Paper & Speaking at Scientific Meetings

By Vernon Booth

To the newly revised and amplified fifth edition of Writing a Scientific Paper, the author has added the companion essay on Speaking at Scientific Meetings. Widely praised in its earlier editions, this concise compendium of advice is expected to receive renewed acclaim. By both the first-time writers of scientific papers and the alert ‘old hand’ it will be found of the greatest help in avoiding faults in writing and presenting papers.

Soft cover 48 pp. £2.50 (US$6.00)

To order or to obtain details of discounts available for purchases in quantity write to:
The Biochemical Society Book Depot, P.O. Box 32, Commerce Way, Colchester CO2 8HP, Essex, U.K.
This compendium, previously published under the title of *Collected Tentative Rules and Recommendations of the Commission on Biochemical Nomenclature* has now been updated and published in its third edition for the International Union of Biochemistry by the Biochemical Society under the title: *Biochemical Nomenclature and Related Documents*.

The compendium, prepared by the IUB Committee of Editors of Biochemical Journals, collects together all the current rules and recommendations on nomenclature that have emanated from the IUPAC-IUB and IUB nomenclature committees. As such it is an indispensable part of the library of all biochemists.

The price is £3.50/US$7.00, postage-paid (vi plus 223 pages, paper bound). A 20% discount is allowable on orders for 10 or more copies to a single address. Payment must accompany the order.

BIOSCIENCE REPORTS
Communications and Reviews in Molecular and Cellular Biology

Published by The Biochemical Society

BIOSCIENCE REPORTS is a new international monthly journal devoted to the rapid publication of high-quality papers that advance new concepts in the areas of molecular and cellular biology. Review articles and other topical material will be included from time to time.

Hon. Advisory Editors:  
A. KORNBERG  
R. R. PORTER  
F. SANGER

Board of Editors:  
Chairman:  C. A. PASTERNAK (U.K.)
Deputy Chairman:  K. A. PIEZ (U.S.A.)

R. A. BRADSHAW (U.S.A.)  
W. J. BRAMMAR (U.K.)  
G. H. DIXON (Canada)  
R. F. DOOLITTLE (U.S.A.)  
A. A. EDDY (U.K.)  
D. M. ENGELMAN (U.S.A.)  
J. R. GRIFFITHS (U.K.)  
F. W. HEMMING (U.K.)  
H.-D. KLENK (Germany)

E. LAZARIDES (U.S.A.)  
W. J. LENNARZ (U.S.A.)  
H. J. MÜLLER-EBERHARD (U.S.A.)  
V. MUTT (Sweden)  
A. PETERKOFSKY (U.S.A.)  
P.-P. SLONIMSKI (France)  
R. J. P. WILLIAMS (U.K.)  
A. R. WILLIAMSON (U.K.)

Publication Details
ISSN 0144-8463
Monthly, starting January 1981. There will be one volume per year.

Subscription Rate
1 year £85.00 US$191.00
Per part £8.00 US$ 18.00

Despatched by Air Mail

Call for Papers
Short reports of original research, of sufficient interest and significance to justify rapid publication, in all areas of biochemistry can be submitted directly to any member of the Board of Editors. Publication will be within approximately 2 months of receipt. Instructions to authors for Bioscience Reports with the addresses of all Editors are available from The Biochemical Society, 7 Warwick Court, London WC1R 5DP.

Lucifer Yellow CH is an intensely fluorescent dye which has been found very effective for marking neurons. The dye is used most often as a tracer to reveal the shape of neurons and also used to study their regeneration pattern. Lucifer Yellow CH is injected intracellularly into neurons and other cells via a micropipette. It then spreads rapidly and is retained within the membrane of the injected cell. In vivo, the dye spreads rapidly to certain adjacent cells, a process known as “dye coupling”, used to reveal the nature of cell junctions.

Another technique, known as “backfilling”, involves immersing the cut end of a nerve into a solution of Lucifer Yellow CH, which moves up the axons by diffusion or through an imposed electrical current. The cells are then impaled with a micropipette and their physiology studied.

In the process of “cell killing” all or part of an intracellularly injected cell is irradiated. The irradiated portion of the cell is killed in minutes, but adjacent cells are not affected. This selective cell destruction allows study of certain aspects of cell physiology.

Although Lucifer Yellow CH does not have significant electron density, it finds application in electron microscopy because of its intense fluorescence.

Lucifer Yellow CH is water soluble and aqueous solutions seem to be chemically stable for several months at ambient temperature. The dye has a low order of toxicity, and is readily visible in vivo at very low concentrations. Thus, it is rapidly gaining importance as a biological tracer in various areas of cell research.
