BIOTHERMODYNAMICS: The Study of Biochemical Processes in Equilibrium

by J.T. Edsall, *Department of Biochemistry and Molecular Biology, Harvard University* and H. Gutfreund, *Department of Biochemistry, Bristol University*

Thermodynamics is a subject of interest to practitioners of many disciplines, since astronomers, physicists, engineers, geologists, chemists and biologists all have in common the laws of energy utilization and interconversion. This book is devoted to the examination and explanation of the principles as applied in biochemistry and biophysics.

The first half of the book presents the historical and Theoretical aspects of thermodynamic principles as required for an understanding of biochemical processes. The second half concerns the interpretation of data obtained from biochemical reactions, ligand binding and calorimetric measurements on biological systems.

ADVANCES IN ENZYMOLOGY AND RELATED AREAS OF MOLECULAR BIOLOGY, Volume 54

edited by A. Meister, Cornell University Medical College

This continues the authoritative series that reviews research into enzymology and related areas of molecular biology. It presents six papers by leading authorities.

TECHNIQUES IN LIQUID CHROMATOGRAPHY

edited by C.F. Simpson, Chelsea College, University of London

This book presents the state of the art in Liquid Chromatography up to the end of 1981. The book is divided into two main sections. The first part deals with the basics of the technique from the kinetic, mechanistic and practical viewpoints; the latter section considers in detail the characteristics of Adsorption, Partition Bonded Phase, Ion Exchange, Gel Permeation and Large Molecule (Affinity) Chromatography.

Throughout the book the terminology is expressed in both SI units and in the practical units commonly used by practising chromatographers.

PROGRESS IN DRUG METABOLISM Volume 7

edited by J.W. Bridges, Robens Institute of Industrial and Environmental Health and Safety and Department of Biochemistry, University of Surrey and L.F. Chasseaud, *Department of Metabolism and Pharmacokinetics, Huntingdon Research Centre*

Progress in Drug Metabolism is a review series intended to provide comprehensive, authoritative, readable, up-to-date, and critical accounts by experts on the biological fate of a drug or xenobiotic in terms of absorption, distribution, biotransformation, and excretion. The reviews are concerned with newer developments or progress in established areas, or they may retrieve and review the widely disseminated literature on a particular subject with the aim of keeping the reader more easily informed on the many and varied developments in drug metabolism studies.

METHODS IN PROTEIN SEQUENCE ANALYSIS

edited by M. Elzinga, Brookhaven National Laboratory, Upton, New York

Methods in Protein Sequence Analysis is an especially timely, state-of-the-art account of all the new methodology available for everyone carrying out protein and peptide sequencing studies today — a volume that will prove absolutely indispensable in both fundamental and applied biological research. The book offers good breadth and depth of coverage of all the forefront chemistry, advanced instrumentation, and novel techniques currently being used in the field.

CONTROLLED-RELEASE TECHNOLOGY: Bioengineering Aspects

edited by K.G. Das, Regional Research Laboratory, Hyderabad, India

This provides the background information and state-of-the-art techniques needed to develop and use safe, effective bioactive toxic chemicals. It presents recently developed techniques for achieving controlled release, dealing with such topics as design parameters, determination of release rates, environmental aspects, and the question of chronic versus acute toxicity.

Writing a Scientific Paper & Speaking at Scientific Meetings

By Vernon Booth

Soft cover 48 pp.
£2.50 (US\$6.00)

To the newly revised and amplified fifth edition of *Writing a Scientific Paper*, the author has added the companion essay on *Speaking at Scientific Meetings*. Widely praised in its earlier editions, this concise compendium of advice is expected to receive renewed acclaim. By both the first-time writers of scientific papers and the alert 'old hand' it will be found of the greatest help in avoiding faults in writing and presenting papers.

BIOCHEMICAL SOCIETY SYMPOSIA NO. 47

Messenger RNA and Ribosomes in Protein Synthesis

Edited by C. F. PHELPS
and H. R. V. ARNSTEIN

The Biochemical Society's Forty-Seventh Symposium, held in London in December 1981, assembled some of the leading workers in this area of biochemistry. The subjects for discussion were chosen for their timeliness and distinctiveness, and included accounts of ribosome and messenger RNA structure and function, initiation factors, caps and ribonucleoproteins, as well as consideration of the processes leading to the distribution of newly synthesized proteins within the cell. The papers presented are now published in this volume.

List of contents and authors:

Preface. Prokaryotic Ribosome Structure: a Kinetic View by C. G. Kurland. *Structural Aspects of Eukaryotic Ribosomes* by R. A. Cox & J. M. Kelly. *The Secondary Structure of Ribosomal RNA, and its Organization within the Ribosomal Subunits* by R. Brimacombe. *Secondary Structure of Eukaryotic Messenger RNA* by C. P. H. Vary & J. N. Vournakis. *Studies on the Structure and Biogenesis of Yeast Ribosomes* by M. Cannon. *Translation Mechanism in Prokaryotes: Structure and Expression of Escherichia coli Initiation Factor IF3 Gene* by M. Grunberg-Manago, M. Springer, J. A. Plumbridge, S. Blanquet, G. Fayat & C. Sacerdot. *How do Eukaryotic Ribosomes Recognize the Unique AUG Initiator Codon in Messenger RNA?* by M. Kozak. *5'-Terminal Caps, Cap-Binding Proteins and Eukaryotic mRNA Function* by A. J. Shatkin, E. Darzynkiewicz, Y. Furuichi, H. Kroath, M. A. Morgan, S. M. Tahara & M. Yamakawa. *Association of an M_r 50000 Cap Binding Protein with the Cytoskeleton in BHK Cells* by H. Trachsel, A. Zumbé, C. Stähli, M. Hümbelin & N. Sonenberg. *Messenger Ribonucleoprotein Complexes in Gene Expression* by H. R. V. Arnstein. *Mechanism of Protein Translocation Across the Endoplasmic Reticulum* by P. Walter & G. Blobel. *Synthesis and Maturation of the Erythrocyte Anion Transport Protein — an Internal Sequence for Membrane Insertion* by H. F. Lodish & W. A. Braell. *Subject Index.*

the enzyme builders

biotechnology line

Boehringer Mannheim have used latest technology in genetic engineering to produce new enzymes such as α -Galactosidase from *E. coli*, and β -Galactose dehydrogenase S from *pseudomonas fluorescens* cloned on *E. coli*.

These enzymes are noted for

- High specific activity for greater economy
- Exceptional purity for minimal interference
- Excellent stability for long term reliability

These are just two of the enzymes which have joined BM's biochemical programme, suitable for analytical, metabolic and molecular studies. There are many more on the way.

Ask us now for the Biochemical Catalogue showing the complete range of enzymes, substrates and cofactors . . . and join our biotechnology line.
