

**Published in December 1983 from Chapman and Hall**

Second Edition

## **BIOCHEMISTRY OF THE CAROTENOIDS**

### **Volume II: Animals**

**T. W. Goodwin**, Johnston Professor of Biochemistry, Liverpool University

This new edition of Professor Goodwin's book, first published over twenty-five years ago, has been completely revised and extended to take account of the many developments in carotenoid biochemistry that have taken place in the intervening years.

Volume II describes the nature, distribution and metabolism of carotenoids in the major divisions of the animal kingdom. Comprehensive reference lists are appended to each chapter and the numerous formulae, figures and tables ensure that the text is well supported by illustrative matter.

Second Edition December 1983

Hardback 0 412 23770 9 £25.00

*Also available:*

## **THE BIOCHEMISTRY OF THE CAROTENOIDS**

### **Volume I: Plants**

**T. W. Goodwin**, Johnston Professor of Biochemistry, Liverpool University

2nd ed 1980:

## **BIOSCIENCE REPORTS**

**Short Papers and  
Reviews in  
Molecular and  
Cellular Biology**

## **Volume 3 in 1983**

**Short papers  
and reviews —  
*f-a-s-t***

Authors usually receive a response to a submitted paper in 2-3 weeks, and publication follows in about 2 months.

#### **Honorary Advisory Editors**

A Kornberg, Stanford  
R R Porter, Oxford  
F Sanger, Cambridge

**Manuscripts (submitted by authors direct to a member of the Board of Editors) after acceptance are typeset on a word processor and are printed on glossy paper for high-quality reproduction of half-tones.**

#### **Board of Editors**

C A Pasternak (Chairman), London  
William J Lennarz (Deputy Chairman), Baltimore

# ***BIOTECHNOLOGY***

Edited by C. F. PHELPS  
and P. H. CLARKE

The fourteen contributions forming this volume were presented at a London meeting of the Biochemical Society including the Society's Forty-Eighth Symposium 'Biotechnology', in December 1982. With today's increasing pressures to develop latest laboratory findings into practical industrial processes as quickly as possible the chosen theme of this Symposium was a timely one. The papers represent up-to-date reports from international biochemists whose work is of direct relevance to the wide areas of interests concerned with biotechnology, together with glimpses of the early development of its techniques and a look at its exciting future.

List of contents and authors:

*Preface. How Biotechnology Developed at University College London* by **E. M. Crook**. *The Future of Biotechnology* by **P. Dunnill**. *Carbohydrate Transformations by Immobilized Cells* by **C. Bucke**. *Biological Halogenation and Epoxidation* by **S. L. Neidleman & J. Geigert**. *High-Productivity Alcohol Fermentations using *Zymomonas mobilis** by **M. L. Skotnicki, R. G. Warr, A. E. Goodman, K. J. Lee & P. L. Rogers**. *The Problem of Lignin Biodegradation* by **L. Wallace, A. Paterson, A. McCarthy, U. Raeder, L. Ramsey, M. MacDonald, R. Haylock & P. Broda**. *Special Bacterial Polysaccharides and Polysaccharases* by **T. Harada**. *A New Era of Exploitation of Microbial Metabolites* by **A. L. Demain**. *Industrial Prospects for Thermophiles and Thermophilic Enzymes* by **B. S. Hartley & M. A. Payton**. *Anaerobic Fermentations – Some New Possibilities* by **J. G. Morris**. *Xenobiotic Degradation in Industrial Sewage: Haloaromatics as Target Substrates* by **H. J. Knackmuss**. *Genetic Analysis and Manipulation of Catabolic Pathways in *Pseudomonas** by **P. R. Lehrbach & K. N. Timmis**. *Plant Cell Cloning and Culture Products* by **L. H. Jones**. *A Hybrid Promoter and Portable Shine-Dalgarno Regions of *Escherichia coli** by **H. A. De Boer, L. J. Comstock, A. Hui, E. Wong & M. Vasser**. *Subject Index*.

257 pp. ISBN 0 904498 15 8 £25.00 (US \$57.50)

## Boehringer Mannheim are extending their range of restriction enzymes and buffers

**A**ha III, Sau I (MstII) and Stu I are part of the rapidly expanding programme of restriction enzymes from Boehringer Mannheim. Not only is our range *wider* than ever, but each new enzyme is supplied with a comprehensive batch-specific data sheet for optimal control of experimental conditions.

Boehringer Mannheim's range of buffers is expanding too. Each one undergoes the highest standard of purification and quality control to provide you with a reliable yet economical preparation. *Tris*, for example, is notable for its low level of heavy metal contamination, whilst *Hepes* is suitable as a cell culture buffer since it is function tested for cell growth.

**A** new book "*Biochemicals for Molecular Biology*" presents information on our range of products for the Molecular Biologist. We will send a copy to you on request.
