

## THE BIOCHEMICAL SOCIETY

The Biochemical Society exists to advance the science of biochemistry through meetings and publications. Several meetings a year are held, each at a different place; original papers are presented and special topics are discussed at symposia and colloquia.

### OFFICERS AND COMMITTEE: 1987-1988

#### Chairman

H. M. Keir, F.R.S.E.

#### Treasurer

B. Spencer

#### General Secretary

R. H. Burdon, F.R.S.E.

#### Meetings Secretary

A. D. B. Malcolm

#### Publications Secretary

C. I. Pogson

#### Committee

H. Baum\*§

R. J. Beynon

D. N. Brindley

C. J. Coulson

A. Crafts-Lighty

J. De Bellerocche

S. Doonan

D. Fisher\*†

R. B. Freedman

G. G. Lunt

M. J. Morgan

L. J. Rogers

E. D. Saggerson

P. G. Strange

I. P. Trayer

A. J. Turner\*‡

R. T. Walker

\* *Ex officio* Member of Committee

† Representative of Group Secretaries

‡ Representative of Editorial Board  
of the *Biochemical Journal*

§ Representative of Professional  
and Educational Committee

*Executive Secretary:* G. D. Jones (7 Warwick Court, London WC1R 5DP)

Persons interested in biochemistry are eligible for election as Members. Details of further facilities accorded to Members, and forms of application for membership, are available from the **Executive Secretary, The Biochemical Society, 7 Warwick Court, London WC1R 5DP** [01-242 1076 (4 lines)].

# MOLECULAR PATHOLOGY

Edited by J. Kay & M.J. Morgan

List of contents and authors: *Ribosomal modification and resistance in antibiotic-producing organisms* by E. Cundliffe. Genetic assembly and selective toxicity of diphtheria-toxin-related polypeptide hormone fusion proteins by J.R. Murphy, W. Bishai, D. Williams, P. Bacha, M. Borowski, K. Parker, J. Boyd, C. Waters & T.B. Strom. *The molecular biology of the morbillivirus (measles) group* by T. Barrett. *The development of novel hepatitis B vaccines* by A.J. Zuckerman. *The role of coxsackie B viruses in the pathogenesis of myocarditis, dilated cardiomyopathy and inflammatory muscle disease* by L.C. Archer, P.J. Richardson, E.G.J. Olsen, V. Dubowitz, C. Sewry & N.E. Bowles. *The molecular biology of human rhinoviruses* by T. Skern, M. Duechler, W. Sommergruber, D. Blaas & E. Kuechler. *From Jenner to genes - the next generation of virus vaccines* by F. Brown. *Studies on the genetic basis of attenuation of the Sabin type 3 poliovirus vaccine* by J.W. Almond, G.D. Westrop, K.A. Wareham, M.A. Skinner, D.M.A. Evans, D. Magrath, G.S. Schild & P.D. Minor. *Cloned antigens of Brugia filarial parasites* by M.E. Selkirk, P.J. Rutherford, D.A. Denham, F. Partono and R.M. Maizels. *Structure and function of candidate vaccine antigens in Plasmodium falciparum* by R.F. Anders, L.J. Murray, L.M. Thomas, K.M. Davern, G.V. Brown & D.J. Kemp. *Schistosome elastases: biological importance, structure, function, and stage-specific expression* by G. Newport, J. McKerrow, R. Hedstrom, J. Culpepper, L. McGarrigle & N. Agabian. *Topogenesis of glycolytic enzymes in Trypanosoma brucei* by F.R. Opperdoes. *DNA probes in human disease* by A.D. Malcolm, R.A. Fallon, J.A. Langdale, H. Figueiredo, P.J. Nicholls, U.B. Voss, C. Wickenden & J.L. Woodhead. *Molecular genetic approaches to cystic fibrosis* by K.W. Klinger, G. Landes, R.H. Schwartz, R. Doherty, T. Lerner & P. Watkins. *Apolipoprotein B gene: plasma cholesterol and atherosclerosis* by J. Scott, R.J. Pease, L.M. Powell, S.C. Wallis, B.J. McCarthy, R.W. Mahley, B. Levy-Wilson & T.J. Knott. *Highly variable minisatellites and DNA fingerprints* by A.J. Jeffreys, V. Wilson, Z. Wong, N. Royle, I. Patel, R. Kelley & R. Clarkson. *Subject index.*

# Concise Encyclopedia Biochemistry

## Second Edition,

revised and expanded by *Thomas Scott* and *Mary Eagleson*

1988. 17 cm x 24 cm. 650 pages. Hardcover. DM 148,-; approx. US \$89.00

ISBN 3 11 011625 1

The only single work of its kind in English, **the Concise Encyclopedia of Biochemistry** provides a comprehensive, yet compact, source of biochemical data and information for the researcher, teacher, and student.

Following a five-year program of collecting and editing new material, as well as the revision of existing entries, the author-editors and the publishers are pleased to announce the new expanded Second Edition of this valuable reference work.

Major entries concerning the latest developments in DNA structure, synthesis, sequencing, binding proteins and methods, oncogenes, lymphokines and other newly discovered regulatory peptides, structural proteins, inositol phosphates, and protein kinases have been added. Graphic illustration has been given high priority, so that regulatory processes, transport, subcellular structures, etc. are abundantly and clearly illustrated.

The coverage of plant biochemistry has also been greatly expanded. Another new addition is a section on buffers which will be useful to anyone involved in laboratory work.

Because of its comprehensiveness and multidisciplinary nature, we are sure that you will find it an indispensable reference tool.

Special features of this edition include:

- Approximately 4,500 entries
- Up-to-date, comprehensive
- Coverage of medical, animal, microbial, plant, and physical biochemistry, natural products, molecular biology, molecular genetics, and biotechnology
- Hundreds of illustrations, including structural formulas, schemes, and metabolic pathways
- Over 100 tables
- Modern terminology based on standard sources, e. g., IUB Enzyme Nomenclature
- Standard biochemical abbreviations
- Extensive cross references with synonyms provided
- Literature references are cited to aid the reader in locating original sources

**Potential audience:** biochemists, clinical biochemists, clinical chemists, medical researchers, clinicians, plant scientists, experimental biologists, lecturers and students of the life sciences.

Price is subject to change without notice

# Heterocyclic Building Blocks

Heterocyclic compounds incorporating such ring systems as imidazole, pyrazole, pyrimidine and quinoline have traditionally played a key role in the field of medicine. They continue to be of significant value, as evidenced by the current literature.<sup>1-10</sup> Suitably functionalized imidazoles, pyrazoles and other simple heterocycles are starting materials for the more complex heterocycles which are very useful in medicinal-chemistry research.

They serve as useful reagents in other areas of chemistry as well. Aldrich offers a variety of these important building blocks, some of which are listed below.

For a list of compounds containing a particular heterocyclic moiety (you must specify the heterocycle of interest), please call our Technical Services Department at 800-231-8327.
