GENE EXPRESSION — Regulation at the RNA and Protein Levels
Edited by J. Kay, F.J. Ballard and R.J. Mayer

List of contents and authors: Gene Expression and Differentiation in P5 Mouse Embryonal Carcinoma by Merilyn J. Sleigh; Regulation of Genes Associated with Drug Metabolism by William H. Elliott, Brian K. May, Michael J. Bewes & Antony J. Haasen; Cloning and Expression of the Genes for Calpain and Calpastatins by Takashii Murachi, Emiko Takeda, Masatoshi Maki, Yoshifumi Adachi & Masakazu Hatanaka; Peptide Signals for Protein Degradation within Lyosomes by J. Fred Dice & Hsi-Ling Chiang; Haematopoietic Growth Factor Control of Normal and Neoplastic Cellular Proliferation by Antony W. Burgess, Jonathan Ceboe & Sandra Smith; Nuclear Pre-mRNA Splicing in Saccharomyces cerevisiae by Jean Beggs, Marie Lousky & Gordon J. Anderson; Control of mRNA Stability During Development of Dicyostelium discoideum by Giorgio Mangiarotti; Effects of Insulin-Like Growth Factors on Protein Metabolism: Why are some Molecular Variants more Potent? by F. John Ballard, Geoffrey L. Francis, Christopher J. Bagley, Laszlo Szabo & J. C. Wallace; Hormonal Regulation of Gene Expression by John W. Funder; Mechanisms by which Progesterone and Glucocorticoids Regulate Casein Gene Expression by Jeffrey M. Rosen, Patrick Poyet, Heather Goodman & Kuo-Fei Lee; Processing of the Polymorphic Immunoglobulin G Receptor by Roberto Solari, Esther Schaerer, Corinne Tallicet, Liliane Raclet & Jean-Pierre Kraehenbuhl; Experimental Characterization of the Autophagic – Lyosomal Pathway in Isolated Rat Hepatocytes by Paul B. Gordon, Yuan G. Kisen, Attila L. Kovacs & Per O. Seglen; The Molecular Chaperone Concept by R. John Ellis, Saska M. Van Der Vies & Seana M. Hemmingsen; Protein Folding and Intracellular Transport: Studies on Influenza Virus Hemagglutinin by Mary-Jane Gotch & Joe Sambrook; Role of Protein Disulfide-Isomerase in the Expression of Native Proteins by Robert S. Freedman, Neil J. Bullied, Hilary C. Hawkins & Jan. L. Payer; Intermediate Filament-Ubiquitin Interactions: Implications for Cell Sanitization by R. John Mayer, James Lowe, Graham Lemos, Michael Landoo, Ken MacLennan & Fergus J. Doherty; Subject index.

KREBS’ CITRIC ACID CYCLE — Half a century and still turning

Protein structure, prediction and design

edited by John Kay, George Lunt and David Osguthorpe

The 57th annual symposium of the Biochemical Society, held at the University of Bath in April 1990, presented current attempts to determine ways of predicting protein structure and to manipulate protein structure. Some of the world’s leading experts in the field presented their view of the current state of the art, and this volume recaptures some of the excitement of the symposium and serves to demonstrate that the prediction and design of protein structure and function is now an attainable goal.

Contents: An assessment of COMPOSER: a rule-based approach to modelling protein structure (Topham and others); Secondary structure prediction and protein design (Garnier and others); Inverting the protein-folding problem (Sander); Structural homology in ligand-specific transport proteins (North); Holistic approaches to receptor and channel structure and dynamics (Kosower); Modelling of binding sites of the nicotinic acetylcholine receptor and their relation to models of the whole receptor (Cockcroft and others); Monoamine neurotransmitter receptors: ligand-receptor models (Saunders and Findlay); The expert system approach to predicting protein structure (Ball and others); Basic design features of the parallel αβ barrel, a ubiquitous protein-folding motif (Wodak and others); Preparation of artificial bifunctional enzymes by gene fusion (Bülow); Restructuring catalysis in the mandelate pathway (Neidhart and others); Identification and design of binding determinants in proteins (Wells and Cunningham); Antibody-combining sites: prediction and design (Gregory and others).

KERATAN SULPHATE
Chemistry, Biology, Chemical Pathology

Edited by

HELMUT GREILING
&
JOHN E. SCOTT

Keratan sulphate is unique, standing at a crossroads, sharing the potential of both typical glycoproteins and typical proteoglycans. In one direction it immunology, cell development and oncogenesis; in the other, important roles in the ultrastructure and function of corneas, joints and intervertebral discs. This book, the first in the field, is the fruit of the first full international symposium on keratan sulphate. The challenge of new viewpoints produced controversy, but also much common ground; this is revealed by the edited discussions, grouped for continuity, which follow the main sections. The bibliography is collected into one section, providing much of the literature on keratan sulphate in one place.

Contents: PART I - CHEMISTRY: Structure of keratan sulphate proteoglycans: core proteins, linkage regions, carbohydrate chains (Stuhlsatz, Keller, Becker, Oeber, Lennarz, Fisher & Greiling); Structural and conformational analysis of keratan sulphate oligosaccharides and related carbohydrate structures (Honsell); Discussion. PART II - IMMUNOLOGY: Keratan sulphate oligosaccharides, members of a family of antigens of the poly-N-acetyl-lactosamine series (Feizi); Studies of keratan sulphates of aorta and cartilage utilizing MAb 6D2 (Baker); Detection and purification of corneal keratan sulphate proteoglycan from non-corneal tissues (Funderburgh & Conrad); Discussion. PART III - BIOSYNTHESIS: Biosynthesis of skeletal and corneal keratan sulphate (Balduini, De Luca & Castellani); Keratan sulphate proteoglycans: chemistry and biosynthesis of the linkage regions (Hascall & Kimura); Discussion. PART IV - REGULATION OF BIOSYNTHESIS: Factors affecting the pathway for the biosynthesis of keratan sulphate (Mason & Sweeney); Sulphation, chain elongation and chain termination in keratan sulphate biosynthesis (Keller, Stuhlsatz & Greiling); Keratan sulphate: a functional substitute for chondroitin sulphate in O2−-deficient tissues? (Scott, Stockwell, Balduini & De Luca); Discussion. PART V - DEGRADATION: Substrate specificity of keratan sulphate-degrading enzymes (endo-β-galactosidase, keratanase and keratanase II) from micro-organisms (Nakazawa, Ito, Yamagata & Suzuki); Degradation of keratan sulphate proteoglycans (Kresse); Discussion. PART VI - KERATAN SULPHATE IN THE TISSUES: The chemical morphology of keratan sulphate proteoglycans (Scott); Articular cartilage keratan sulphate: maturation, ageing, biomechanical and scale effects (Stockwell); Proteoglycans of mammalian corneal stroma (Dambly & Gregory); Discussion; Developmental aspects of keratan sulphate (Cintron, Covington, Kublin, Gregory & Dambly); Keratan sulphate proteoglycans in organ and cell culture (Dahl); Discussion. PART VII - CHEMICAL PATHOLOGY: Studies of the metabolism of keratan-sulphate-bearing proteoglycans of cartilage (Thorn, Williams, Sweet, Maldonado, Lenz, Schnitzer & Kuehn); Serum keratan sulphate in rheumatoid arthritis and different clinical subsets of osteoarthritis (Seibel, Tawhin, Braun, Kiefer, Müller & Paulsson); Factors affecting the determination of keratan sulphate using monoclonal antibodies in immunosassay procedures (Caterson, Brooks, Sattangi, Racliffe, Hardingham & Muir); Discussion; Alterations in the synthesis of keratan sulphate proteoglycan in corneal wound healing and in macular corneal dystrophy (Hasel, Sundararaj, Cintron, Midura & Hascall); Distribution of keratan sulphate-containing proteoglycans in human aorta and their possible role in the calcification of aorta (Greiling, Loffler & Stuhlsatz); Discussion. Bibliography. Index.
