

26 Essays in BIOCHEMISTRY

Volume 26

Edited by **K. F. Tipton**

ISBN 1 85578 007 0 PRICE : £12.50/US\$25.00

Essays in Biochemistry is one of the most popular series of books created by the Biochemical Society. First started in 1965, and until recently published by Academic Press, the Society has now entrusted its publication to Portland Press. The series has undergone extensive revision to restore its relevance for its primary audience - advanced undergraduates, graduate students and their teachers.

Essays in Biochemistry will be published annually at the start of each academic year. Each volume will cover exciting and rapidly developing areas of biochemistry and molecular and cellular biology of particular interest to students and their teachers. Carefully selected bibliographies provide a lead in to the primary literature, helping readers pursue topics in greater depth.

Contents

- The biochemistry of memory **Steven P. R. Rose**
- Tubulin and microtubules **Edward H. Byard and Bodo M.H. Lange**
- Plant signal perception and transduction: the role of the phosphoinositide system **Bjørn K. Drøbak**
- Artificial cell adhesive proteins **Kiyotoshi Sekiguchi, Toshinaga Maeda and Koiti Titani**
- The urea cycle: a two compartment system **Malcolm Watford**
- Antibody engineering: an overview **Richard O'Kennedy and Paul Roben**
- Ecstasy: towards an understanding of the biochemical basis of the actions of MDMA **Marcus Rattray**
- Structure and function of ribonuclease A binding subsites **Xavier Parés, M. Victòria Nogués, Rafael de Llorens and Claudi M. Cuchillo**
- Metabolic studies using ¹³C nuclear magnetic resonance spectroscopy
Ronnitte Badar-Goffer and Herman Bachelard

Two review compendia from Portland Press

Biochemical Journal Reviews Compendium 1991

This invaluable compendium contains the review articles published in the **Biochemical Journal** in 1991. The reviews cover a wide range of modern biochemistry and molecular biology and provide the opportunity for research workers to gain an overview of areas outside their own particular speciality.

The compilation is also an important source of teaching material. The use of colour in diagrams allows the particularly clear presentation of complex topics, and enhances this book's value as a teaching aid.

The reviews fall into five sections covering:

- * Gene structure and expression
- * Cell biology and development
- * Proteins
- * Membranes and bioenergetics
- * Regulation of metabolism

Areas reviewed include: pulmonary surfactant proteins, adenovirus oncoproteins, protein-DNA recognition, transcription factors, regulation of gene expression by insulin, glycosylation mutants and protein transport, dioxin toxicity, interaction of ribosomes and the cytoskeleton, muscle contraction, blood coagulation and the complement system, caldesmon, ras proteins, magnetic resonance of membranes, regulation of muscle protein turnover and control of heart ATP synthesis.

"It provides a valuable teaching aid at a reasonable cost over quite a wide range of biochemistry and molecular biology."

Biochemical Education

ISBN 1 85578 020 8,

240 pages

price £12.50/US\$25.00

Journal of Biological Chemistry Minireview Compendium 1991

The **Journal of Biological Chemistry** is one of the world's leading journals of biological chemistry; it publishes over 1000 research articles each year. It also publishes review articles on selected topics of scientific importance. This is the compendium of reviews published during 1991. The 36 reviews published in 1991 covered a wide range of topics and will supply invaluable material for lecturers and students.

Topics reviewed include: protein structure of actin, HNF-1, cytoplasmic transcription system encoded by vaccinia virus, metal-catalyzed oxidation of proteins, the interleukin-2 receptor, antigenic structures recognized by cytotoxic T lymphocytes, the cholinesterases, lipid activation of protein kinase C, homologous pairing and strand exchange driven by RecA protein, phosphorylation of ribosomal protein S6, DNA topoisomerases, tumor necrosis factor, three proteolytic systems in yeast, protein N-myristoylation, nitrogenases, cytochrome P-450, visual excitation and recovery, calmodulin fluorescence spectroscopy, caldesmon, adhesive recognition sequences,

protein phosphorylation, SPARC, tenascin and thrombospondin, selenocysteine-containing enzymes, aminoacyl-tRNA synthetases, DNA polymerase III holoenzyme, molecular genetics of Alzheimer disease amyloid, lysosomal membrane glycoproteins, conotoxins, and CD 45.

The Journal of Biological Chemistry

1991 MINIREVIEW COMPENDIUM

Published by the American Society for Biochemistry and Molecular Biology

Four firsts from **BIOS** SCIENTIFIC PUBLISHERS

Oncogenes and Tumor Suppressor Genes *F. Macdonald and C.H.J. Ford*

This book is the first in a new series called "Medical Perspectives", devised specifically for non-specialists working in medicine and the medical sciences. Medical students in particular will find these concise texts useful. Primarily intended to inform and explain, each book in the series examines the fascinating developments now occurring in the life sciences which are having, or which are likely to have, a major impact on human medicine and medical practice.

In this book, the authors use the most up-to-date laboratory and clinical data to summarize our present understanding of the roles of oncogenes and tumor suppressor genes in cancer. They also describe techniques for studying these genes, their clinical relevance for diagnosis and prognosis, and ideas for turning this knowledge into useful clinical treatments.

ISBN 1 872 748 55 4 paperback published May 1991, price £11.95/US\$24.00

Abscisic Acid: Physiology and Biochemistry *Edited by W. J. Davies and H. G. Jones*

The first volume in this new series of high-quality, carefully edited, and topic-oriented reviews comprises an up-to-date survey of the state of our knowledge concerning the plant growth regulator, abscisic acid. Leading experts from the USA, Europe and Australia emphasise recent advances and the application of molecular techniques.

ISBN 1 872748 65 1 hardback to be published in October 1991, price provisionally £39.95/US\$80.00

An Introduction to Centrifugation *T.C. Ford and J.M. Graham*

"Introduction to Biotechniques" is a new series which gives the novice an introduction to basic techniques. Each book covers both the theory and the practical applications of a key technique. This first book explains what centrifugation is, what it does, how it does it, and the types of centrifuges, rotors, techniques, and density gradient media currently available. It is also useful for the more experienced worker who needs a better grasp of the theory to modify or design new separation methods.

ISBN 1 872748 40 6 paperback published February 1991, price £12.95/US\$25.00

Molecular Biology LABFAX

T.A. Brown

Tracking down useful data is time-consuming and frustrating. Now, a new series of books provides the data you need ... quickly and accurately. Labfax is the most comprehensive, easy-to-use, best value for money laboratory companion yet conceived.

ISBN 1 872748 00 7, spiral bound in hard case published January 1991, price £21.95

The LABFAX series is co-published in North America with Academic Press, Inc., and in the rest of the world with Blackwell Scientific Publications Ltd. Orders from North America to Academic Press Inc.
