

Nutrient Regulation of Insulin Secretion

edited by **P. R. Flatt**

ISBN 1 85578 004 6

The mechanism of insulin release in response to the body's intake of nutrients is a problem at the centre of research into diabetes. **Nutrient Regulation of Insulin Secretion** is a comprehensive review of the mechanisms by which nutrients, such as glucose, and neurohormonal stimuli generated by feeding, control pancreatic B-cell function in health and disease.

Contents

Insulin secretion and the entero-insular axis **L.M. Morgan**

Role of classical and peptidergic neurotransmitters in insulin secretion **J.J. Holst**

Intra-islet interactions **V. Marks, E. Samols and J. Stagner**

Biosynthesis of insulin secretory granule proteins **P.C. Guest and J.C. Hutton**

Regulation of insulin secretion by nutrients: the fuel concept **W.J. Malaisse**

Glucokinase: signal recognition enzyme for glucose-induced insulin secretion **S. Lenzen**

Phospholipids and insulin secretion **N. G. Morgan and W. Montague**

Intracellular pH and B-cell function **L. Best**

Regulation of K^+ permeability and membrane potential in insulin-secreting cells **J.-C. Henquin, A. Debuyser, G. Drews and T. D. Plant**

Ion channels involved in the regulation of nutrient-stimulated insulin secretion **F. M. Ashcroft, B. Williams, P. A. Smith and C. M. S. Fewtrell**

Cytoplasmic calcium and insulin secretion **B. Hellman, E. Gylfe, E. Grapenlæsser, P.-E. Lund and A. Marcström**

The role of protein kinase C in insulin secretion **S. J. Persaud, P.M. Jones and S.L. Howell**

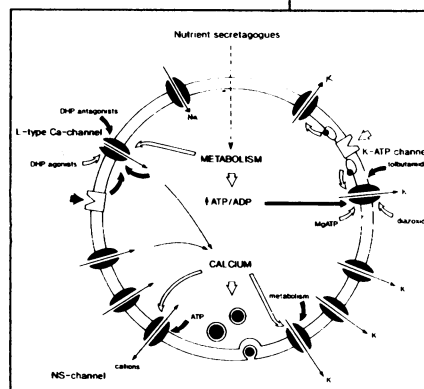

Cyclic AMP, protein phosphorylation and insulin secretion **S. J. Hughes and S.J.H. Ashcroft**

Mechanisms of action of entero-insular hormones, islet peptides and neural input on the insulin secretory process **P.-O. Berggren, P. Rorsman, S. Efendic, C.-G. Ostenson, P.R. Flatt, T. Nilsson, P. Arkhammar and L. Juntti-Berggren**

Molecular mechanisms of sulphonylurea action in the pancreatic B-cell **D.A. Nelson, L. Aguilar-Bryan, H. Raef and A.E. Boyd III**

Defective insulin secretion in diabetes and insulinoma **P. R. Flatt, C.J. Bailey, P.-O. Berggren, L. Herberg and S.K. Swanston-Flatt**

Mechanisms of destruction of insulin-secreting cells **H. Okamoto**

Copies of **Nutrient Regulation of Insulin Secretion** (price £60.00/US\$111.00) can be ordered from Portland Press at the address below. Payment should accompany order and can be made by cheque or credit card.

Portland Press Ltd, Commerce Way, Whitehall Industrial Estate, Colchester, CO2 8HP, England.

26 Essays in 26 BIOCHEMISTRY 26 Volume 26

Edited by **K. F. Tipton**

ISBN 1 85578 007 0 PRICE : £12.50/US\$25.00

Essays in Biochemistry is one of the most popular series of books created by the Biochemical Society. First started in 1965, and until recently published by Academic Press, the Society has now entrusted its publication to Portland Press. The series has undergone extensive revision to restore its relevance for its primary audience - advanced undergraduates, graduate students and their teachers.

Essays in Biochemistry will be published annually at the start of each academic year. Each volume will cover exciting and rapidly developing areas of biochemistry and molecular and cellular biology of particular interest to students and their teachers. Carefully selected bibliographies provide a lead in to the primary literature, helping readers pursue topics in greater depth.

Contents

- The biochemistry of memory **Steven P. R. Rose**
- Tubulin and microtubules **Edward H. Byard and Bodo M.H. Lange**
- Plant signal perception and transduction: the role of the phosphoinositide system **Bjørn K. Drøbak**
- Artificial cell adhesive proteins **Kiyotoshi Sekiguchi, Toshinaga Maeda and Koiti Titani**
- The urea cycle: a two compartment system **Malcolm Watford**
- Antibody engineering: an overview **Richard O'Kennedy and Paul Roben**
- Ecstasy: towards an understanding of the biochemical basis of the actions of MDMA **Marcus Rattray**
- Structure and function of ribonuclease A binding subsites **Xavier Parés, M. Victòria Nogués, Rafael de Llorens and Claudi M. Cuchillo**
- Metabolic studies using ^{13}C nuclear magnetic resonance spectroscopy
Ronnitte Badar-Goffer and Herman Bachelard

Two review compendia from Portland Press

Biochemical Journal Reviews Compendium 1991

This invaluable compendium contains the review articles published in the **Biochemical Journal** in 1991. The reviews cover a wide range of modern biochemistry and molecular biology and provide the opportunity for research workers to gain an overview of areas outside their own particular speciality.

The compilation is also an important source of teaching material. The use of colour in diagrams allows the particularly clear presentation of complex topics, and enhances this book's value as a teaching aid.

The reviews fall into five sections covering:

- * Gene structure and expression
- * Cell biology and development
- * Proteins
- * Membranes and bioenergetics
- * Regulation of metabolism

Areas reviewed include: pulmonary surfactant proteins, adenovirus oncoproteins, protein-DNA recognition, transcription factors, regulation of gene expression by insulin, glycosylation mutants and protein transport, dioxin toxicity, interaction of ribosomes and the cytoskeleton, muscle contraction, blood coagulation and the complement system, caldesmon, ras proteins, magnetic resonance of membranes, regulation of muscle protein turnover and control of heart ATP synthesis.

"It provides a valuable teaching aid at a reasonable cost over quite a wide range of biochemistry and molecular biology."

Journal of Biological Chemistry Minireview Compendium 1991

The **Journal of Biological Chemistry** is one of the world's leading journals of biological chemistry; it publishes over 1000 research articles each year. It also publishes review articles on selected topics of scientific importance. This is the compendium of reviews published during 1991. The 36 reviews published in 1991 covered a wide range of topics and will supply invaluable material for lecturers and students.

Topics reviewed include: protein structure of actin, HNF-1, cytoplasmic transcription system encoded by vaccinia virus, metal-catalyzed oxidation of proteins, the interleukin-2 receptor, antigenic structures recognized by cytotoxic T lymphocytes, the cholinesterases, lipid activation of protein kinase C, homologous pairing and strand exchange driven by RecA protein, phosphorylation of ribosomal protein S6, DNA topoisomerases, tumor necrosis factor, three proteolytic systems in yeast, protein N-myristoylation, nitrogenases, cytochrome P-450, visual excitation and recovery, calmodulin fluorescence spectroscopy, caldesmon, adhesive recognition sequences,

protein phosphorylation, SPARC, tenascin and thrombospondin, selenocysteine-containing enzymes, aminoacyl-tRNA synthetases, DNA polymerase III holoenzyme, molecular genetics of Alzheimer disease amyloid, lysosomal membrane glycoproteins, conotoxins, and CD 45.
