Nutrient Regulation of Insulin Secretion

edited by P. R. Flatt

ISBN 1 85578 004 6

The mechanism of insulin release in response to the body's intake of nutrients is a problem at the centre of research into diabetes. Nutrient Regulation of Insulin Secretion is a comprehensive review of the mechanisms by which nutrients, such as glucose, and neurohormonal stimuli generated by feeding, control pancreatic B-cell function in health and disease.

Contents

Insulin secretion and the entero-insular axis L.M. Morgan
Role of classical and peptidergic neurotransmitters in insulin secretion J.J. Holst
Intra-islet interactions V. Marka, E. Samols and J. Stegner
Biochemistry of insulin secretory granule proteins P.C. Guest and J.C. Hutton
Regulation of insulin secretion by nutrients: the fuel concept W.J. Malaisse
Glucokinase: signal recognition enzyme for glucose-induced insulin secretion S. Lenzen
Phospholipids and insulin secretion N. G. Morgan and W. Montague
Intracellular pH and B-cell function L. Best
Regulation of K+ permeability and membrane potential in insulin-secreting cells J.-C. Henquin, A. Debuyser, G. Drews and T.D. Plant
Ion channels involved in the regulation of nutrient-stimulated insulin secretion F. M. Ashcroft, B. Williams, P. A. Smith and C. M. S. Fewtrell
Cytoplasmic calcium and insulin secretion B. Hellman, E. Gyte, E. Grapengiesser, P.-E. Lund and A. Marcström
The role of protein kinase C in insulin secretion S. J. Persaud, P.M. Jones and S.L. Howell
Cyclic AMP, protein phosphorylation and insulin secretion S. J. Hughes and S.J.H. Ashcroft
Molecular mechanisms of sulphonylurea action in the pancreatic B-cell D.A. Nelson, L. Aguilar-Bryan, H. Raaf and A.E. Boyd III
Mechanisms of destruction of insulin-secreting cells H. Okamoto

Copies of Nutrient Regulation of Insulin Secretion (price £60.00/US$111.00) can be ordered from Portland Press at the address below. Payment should accompany order and can be made by cheque or credit card.

The Archaebacteria: Biochemistry and Biotechnology

Edited by M J Danson, D W Hough and G G Lunt

The tools of biotechnology are often living organisms and cell constituents which have to survive extremely challenging environments. Archaebacteria may provide some of the answers to many of the problems of using biotechnological techniques under industrial conditions.

The Biochemical Society Symposium drew together acknowledged international experts on archaebacteria. They explored the biochemistry and molecular biology of these unusual organisms, and then examined how we might use these cells and their uniquely stable constituents to meet the demands of industry's biotechnological future.

The book is divided into five sections:

* The archaebacteria
* Biochemical features of archaebacteria
* Molecular biological features of archaebacteria
* Proteins in extreme environments
* Biotechnological potential of the archaebacteria

Contents

What are the archaebacteria and why are they important?
The enzymology of archaebacterial pathways of central metabolism

Bioenergetics and autotrophic carbon metabolism of chemolithotrophic archaebacteria
Biochemistry of methanogenesis
Archaebacterial lipids: structure, biosynthesis and function
Progress in developing the genetics of the halobacteria
RNA polymerases and transcription in archaebacteria
Structure, function and evolution of the archaebacterial ribosome
Chromosome structure and DNA topology in extremely thermophilic archaebacteria

Halophilic malate dehydrogenase - a case history of biophysical investigations
Proteins from hyperthermophilic archaebacteria
Biotechnological potential of halobacteria
Enzymes from thermophilic archaebacteria: current and future applications in biotechnology
Thermoacidophilic archaebacteria: potential applications
Biotechnological potential of methanogens
Where next with archaebacteria?

Essays in Biochemistry Volume 27

Edited by Keith Tipton

Essays in Biochemistry has been appreciated as a source of material by biochemistry teachers for many years. Relaunched by Portland Press in 1991 with a new format it has returned to its original focus on topics at a level ideal for use by advanced undergraduates, graduate students, and their teachers. Each essay provides a valuable overview of an exciting and rapidly developing area of biochemistry or molecular or cellular biology.

Contents

The collagen superfamily - diverse structures and assemblies D J S Hulme
Towards an understanding of C3-C4 photosynthesis S Rawsthorne
The biochemistry of blood clotting: the digestion of a liquid to form a solid M F Scully
Endothelins T Masaki
and M Yanagisawa
Wither

PQQ W S McIntyre Ubiquitin R J Mayer and F J Doherty
The repair of DNA alkylolation damage by methyltransferases and glycosylases L D Samson
Roles for protein phosphorylation in synaptic transmission R Rodnight
and S T Wofchuk
Biosensors: principles and practice J D Newman
and A P F Turner
Cell death in Parkinson's disease S A Greenfield
How groups of proteins titrate - a new approach H B F Dixon
Proteolysis is a key process in virus replication G Kemp, A Webster
and W C Russell

ISBN 1 85578 015 1 Paperback, 178 pages, £15.00/US$30.00* August 1992

Essays In Biochemistry Volume 26, edited by K. F. Tipton

"I have little doubt that the current scientific interest of the topics, and the quick readability, conciseness and visual appeal of this collection of essays, will be of interest to students and teachers of many branches of modern biological science and not just of biochemistry as indicated in the title" Biochemical Education

ISBN 1 85578 007 0 Paperback 110 pages £12.50/US$25.00* 1991

Compendium of Biochemical Nomenclature and Related Documents

Edited by C. Liébecq

This is an essential reference text for all authors and editors in biochemistry and related disciplines. It contains all the current recommendations on nomenclature issued by the nomenclature committees of the International Union of Biochemistry. It also includes text from, and references to, other important nomenclature documents.

The book's main sections cover: amino acids, peptides and proteins; enzymes; nucleotides, nucleic acids and protein synthesis; carbohydrates; and lipids. There are also articles covering the nomenclature of: organic chemistry, isotopically modified compounds, phosphorus-containing compounds, folic acids, vitamin B6, corrinoids and tetrapyrroles; as well as the presentation of thermodynamic data.

ISBN 185578 005 4 paperback 350 pages £18.00/US$36.00* August 1992

Nucleoside Triphosphatases In Energy Transduction, Cellular Regulation and Information Transfer in Biological Systems

A discussion meeting of the Royal Society

The importance of enzyme reactions in the transduction of energy and information is gradually being realized. Many of these enzyme reactions involve the hydrolysis of phosphate ester bonds and link a wide variety of processes within the cell: triphosphatase hydrolysis provides the energy required in sensory perception and cell signalling, as well as in a range of protein-DNA and protein-protein interactions.

This Discussion Meeting of the Royal Society focused on a class of physiologically diverse enzymes, including myosin, the G-proteins and nitrogenase, that can be grouped together because they share structural features and, most probably, a common mechanism. The interchange of ideas between the participants of the meeting will provide a stimulus for research workers in this field.

ISBN 1 85578 032 1, casebound, 120 pages (approx), £19.50/US$35.00*, August 1992

Orders for these books, or requests for further information should be sent to: Portland Press Commerce Way, Colchester CO2 8HP UK Tel: (0206) 796351 Fax: (0206) 799331 Orders from the USA and Canada should be sent to: Portland Press Inc, PO Box 2191, Chapel Hill, NC 27515-2191, USA.
