# The Biology of Nitric Oxide

## Part I - Physiological and Clinical Aspects

Edited by **S Moncada, M A Marletta, J B Hibbs Jr. and E A Higgs**

It is now widely recognised that nitric oxide acts as a signal transduction mechanism in many biological systems. Understanding the molecular mechanisms of this compound, its distribution and its relation to other important agents will be of vital physiological significance. Research in this area is expanding rapidly and has many implications for our understanding of the cardiovascular system, the central and peripheral nervous systems and host defence mechanisms.

The proceedings of the Second International Meeting on the Biology of Nitric Oxide brings together for the first time investigations from very different areas of research with a common interest in the newly discovered pathway synthesising nitric oxide from L-arginine in mammalian cells.

The proceedings are being published in two volumes, and Part I reports the aspects of nitric oxide research relating to the cardiovascular, central and peripheral nervous systems, as well as clinical data. Part II entitled **Enzymology, Biochemistry and Immunology** will be published in December 1992.

ISBN 1 85578 012 7 Hardback  
420 pages

146 papers

£87.50/US\$160.00  
October 1992

### Part II - Enzymology, Biochemistry and Immunology

ISBN 1 85578 013 5 Hardback  
230 pages

97 papers

£57.50/US\$110.00  
December 1992

**Parts I and II purchased together**

£140.00/US\$260.00

### Order Form

Please send me the following volumes of **The Biology of Nitric Oxide**

Title	Price	Quantity
Part 1 - Physiological and Clinical Aspects	£87.50/US\$160.00	_____
Part 2 - Enzymology, Biochemistry and Immunology	£57.50/US\$110.00	_____
Parts 1 and 2	£140.00/US\$260.00	_____

I enclose payment\* of £/US\$ \_\_\_\_\_

Please debit my credit card:  Visa  Mastercard/Access  Eurocard  American Express

Card No. \_\_\_\_\_ Expiry date \_\_\_\_\_

Signature \_\_\_\_\_ Date \_\_\_\_\_

Name \_\_\_\_\_

Address \_\_\_\_\_

## New from Portland Press ...

### Hemicellulose and Hemicellulases

Edited by **M P Coughlan** and **G P Hazlewood**  
Portland Press Monograph Series No. 4

This book is an authoritative and up-to-date treatment of both the substrate (hemicellulose) and the enzymes which convert it to products of smaller molecular weight. It brings together the salient features of this group of enzymes with considerable biotechnological potential. It will be of interest to academics, postgraduates and researchers involved in biomass conversion, pulp and paper manufacture, brewing and flour modification.

Topics covered include: Chemistry of hemicelluloses; Biochemical aspects of the production of microbial hemicellulases; Enzymological aspects of microbial hemicellulases; Feruloyl and p-coumaroyl esterases from the anaerobic fungus *Neocallimastix* strain MC-2; Molecular biology of hemicellulases; Applications of hemicellulases in biopulping, bio-bleaching, food, feed and pulp and paper industries.

ISBN 1 85578 036 4 Hardback £38.95/US\$60.00  
156 pages approx. June 1993

### Immunotechnology

Edited by **J P Gosling** and **D R Reen**  
Portland Press Proceeding No 4

This book provides a detailed account of the current state of immunotechnology and aims to promote increased interaction between practitioners of the different applications.

Topics covered include: Generation of antibodies cross-reactive with proteins by peptide immunization; Regulation of immunoglobulin gene expression; Combinatorial libraries; Genetics of antibody assembly in plants; Single-chain immunotechnology of Fv analogues and fusion proteins; Real-time BIA for the direct measurement of antibody-antigen interactions; Functional mapping of proteins with monoclonal antibodies; Advanced immunoassays; Catalytic antibodies; Monoclonal antibodies and their fragments for drug targeting; The application of engineered antibodies to the treatment of neoplastic disease.

ISBN 1 85578 035 6 Hardback £45.00/US\$72.00  
164 pages approx. July 1993

## Postgraduate Study in the Biological Sciences

### A Researcher's Companion

**R J Beynon**

Thinking of a career in research? About to start - or finish - your PhD? About to start post-doctoral research? Then this guide is essential for you. It provides some of the basic advice and information that will be needed during a research training, with a two-fold emphasis; the importance of planning, and the need to develop independence of thought and action.

#### *What is in it for you?*

**Students:** It presents, in an easy and non-dictatorial style, an indication of the way that you can proceed, and a brief description of the types of resources which can facilitate your progress.

**Supervisors:** This book will excel as a foundation course on essential skills for research students that, although seen as peripheral to experimentation, mark a professional scientist. Used as a supplement to your established practices, it aims to extend student awareness and skills through their own efforts.

**Contents:** Starting out ♦ Developing your experimental skills ♦ Conducting a research project ♦ Writing about your work ♦ Speaking in public ♦ Computers and computing ♦ Safety and legislative control ♦ The graduate student as teacher ♦ Moving on

# The Archaeobacteria: Biochemistry and Biotechnology

Edited by M J Danson, D W Hough and G G Lunt

The tools of biotechnology are often living organisms and cell constituents which have to survive extremely challenging environments. Archaeobacteria may provide some of the answers to many of the problems of using biotechnological techniques under industrial conditions.

The Biochemical Society Symposium drew together acknowledged international experts on archaeobacteria. They explored the biochemistry and molecular biology of these unusual organisms, and then examined how we might use these cells and their uniquely stable constituents to meet the demands of industry's biotechnological future.

The book is divided into five sections:

- \* The archaeobacteria
- \* Biochemical features of archaeobacteria
- \* Molecular biological features of archaeobacteria
- \* Proteins in extreme environments
- \* Biotechnological potential of the archaeobacteria

## Contents

What are the archaeobacteria and why are they important?	W F Doolittle
The enzymology of archaeobacterial pathways of central metabolism	M J Danson and D W Hough
Bioenergetics and autotrophic carbon metabolism of chemolithotrophic archaeobacteria	G Fuchs <i>et al</i>
Biochemistry of methanogenesis	R S Wolfe
Archaeobacterial lipids: structure, biosynthesis and function	M Kates
Progress in developing the genetics of the halobacteria	W F Doolittle <i>et al</i>
RNA polymerases and transcription in archaeobacteria	W Zillig <i>et al</i>
Structure, function and evolution of the archaeal ribosome	A T Matheson
Chromosome structure and DNA topology in extremely thermophilic archaeobacteria	P Forterre <i>et al</i>
Halophilic malate dehydrogenase - a case history of biophysical investigations	H Eisenberg
Proteins from hyperthermophilic archaea	R Hensel <i>et al</i>
Biotechnological potential of halobacteria	F Rodriguez-Valera
Enzymes from thermophilic archaeobacteria: current and future applications in biotechnology	D A Cowan
Thermoacidophilic archaeobacteria: potential applications	P R Norris
Biotechnological potential of methanogens	L Daniels
Where next with archaeobacteria?	O Kandler

ISBN 1 85578 010 0 Hardback 207 pages plus index £45.00/US\$90.00 July 1992
