Although, at the time of going to press, the information contained in this publication is believed to be correct, neither the authors nor the editors nor the publisher assume any responsibility for any errors or omissions herein contained.
Instructions to Authors

General policy The Biochemical Journal publishes papers in English in all fields of biochemistry, provided that they make a sufficient contribution to biochemical knowledge. Papers, new results obtained experimentally, descriptions of new experimental methods of biochemical importance, or new interpretations of existing results. Theoretical contributions will be considered equally with papers dealing with experimental work. All work presented should have as its aim the development of biochemical concepts rather than the mere reporting of confirmatory or inconclusive work will not be published. The Biochemical Journal will not publish material that has been wholly or largely published elsewhere in the same form, in any language, without the consent of the Society. Authors will be required to sign an undertaking to these effects.

Authors may suggest potential reviewers for their papers, but the journal is under no obligation to follow such suggestions. Authors may also specify the names of those they wish to exclude from consideration elsewhere, and that if the paper is accepted for publication the authors will transfer to the Biochemical Society the copyright in the paper, which will then not be published elsewhere in the same form, in any language, without the consent of the Society. Authors will be required to sign an undertaking to these effects.

To allow the reviewers to assess possible overlap with previous work, all submitted papers must be accompanied by duplicate copies of the author's relevant published work and of all related papers in press or under editorial consideration in this or other journals.

The paragraphs below are a summarized version of the journal's complete instructions to Authors [Biochem. J. (1994) 297, 1-15], of which copies are available free of charge from the editorial office.

The following types of paper are included in the journal:

- Research Papers are the normal form of publication, and may be of any length that is justified by their content. However, because of pressure on the journal, no single contribution can be more than 25 printed pages. The length of the minimum length required for review purposes makes the experiments and clarity in interpreting them. A guide, the most Research Papers published in the Biochemical Journal are of between six and eight printed pages. A concise well-written paper tends to be published more rapidly.

- Research Communications are short (maximum four printed pages) papers bringing particularly novel and significant findings to the attention of the research community. It is intended that a decision on acceptance or rejection will be made within 2 weeks of receipt, and publication of accepted Communications will follow within 2 months. Research Communications receive full but accelerated reviewing and the criteria of novelty and significance are strictly enforced; Communications are reviewed for accelerated treatment.

- BJ Letters are brief (two printed pages or less) items of scientific correspondence intend- cations and citation of references. Typescripts should expand particular points made in published work, to comment on or criticize work previously published in the Biochemical Journal, to discuss features of novel nucleotide and/or amino acid sequence data of particular biological significance, or to present a new hypothesis. They should not contain extensive new data (which would best be placed in a regular paper) and do not contain any vehicle for publication of preliminary results. If a letter is polemical in nature, a reply will be solicited from other interested parties.

- Reviews will usually be solicited, although unsolicited reviews will be considered for publication. Prospective writers of reviews should consult the Reviews Editor, via the editorial office, and should enclose a short (one typed page) summary of the area they propose to cover.

Procedure for submission Before preparing papers for the journal, authors should consult a current issue to make themselves familiar with the general format, such as the use of cross-headings, layout of tables and figures and citation of references. Typescripts should be double-spaced throughout (particularly references and table and figure legends) on numbered sheets of uniform size (preferably ISO A4) with wide margins. Output from low-quality dot matrix printers is not acceptable. A full page of text in the Biochemical Journal contains approximately 1200 words; when calculating the printed length, papers allowance must be made for the space occupied by tables and figures and the number of text words reduced accordingly.

Either the Harvard system or the numerical system of references may be used. A reference to "unpublished work" should be accompanied by the names of all persons concerned; a reference to a "personal communication" must be supported by written permission for the quotation from the person or persons concerned; both of these types of citation are permitted in the text only, not in the list of references.

Three copies of the typescript (four copies for Research Communications), with a letter covering whether additional copies of the synopsis, should be addres- to:

The Managing Editor Biochemical Journal 59 Portland Place London W1N 3AJ U.K.

*Submission by fax* Research Communications and BJ Letters that do not contain halftone figures may be submitted by fax to the office above. Only one copy of the fax need be transmitted. Acknowledgment of receipt and the review decision will be returned by fax to the author. The current Instructions to Authors contains full details of this procedure.

*Submission on diskette* The journal encourages authors to submit diskettes of accepted articles to the editorial office. Every effort will be made to use the diskette during typesetting, but this cannot be guaranteed. Authors must ensure that all diskettes have been updated to incorporate all revisions, and hence that the version on the diskette matches the accepted hard copy. Files should be formatted double-spaced with no hypertext inclusion. Automatic hardcopy (no hard returns with paragraphs) The diskette should be accompanied by a covering letter specifying manuscript number, operating system and software program. We will try to accommodate all hardware and software systems; however, we prefer WordPerfect for Windows.

Other information

The Biochemical Journal is published and distributed by Portland Press Ltd on behalf of the Biochemical Society. It is published twice monthly; in 1994 volumes 297-304 (three parts each) will appear. The subscription also includes an annual supplement of Biochemical Journal Reviews and an author and key-word index.

Subscription rates Institutional subscription rates for 1994 are shown below. Subscribers to the Biochemical Journal can subscribe additionally to Biochemical Society Transactions on a joint subscription at a reduced rate. Terms are cash with order (£1 sterling for subscribers other than in North America, or US$ equivalent at current rate of exchange), or against pro-

- Microfiche and back issues Volumes 102-296 of the Biochemical Journal are available on microfiche. Back issues are also available by special order. Further details may be obtained from the address below.

Subscription department Portland Press Ltd P.O. Box 32, Commerce Way Colchester CO2 8HP, Essex, U.K.

*Advertising* Advertising is accepted in the Biochemical Journal. For information contact the Advertising Department, Portland Press Ltd, 59 Portland Place, London W1N 3AJ (telephone 071-580 5530; fax 071-323 1136).

Instructions to Authors

- General policy The Biochemical Journal publishes papers in English in all fields of biochemistry, provided that they make a sufficient contribution to biochemical knowledge. Papers, new results obtained experimentally, descriptions of new experimental methods of biochemical importance, or new interpretations of existing results. Theoretical contributions will be considered equally with papers dealing with experimental work. All work presented should have as its aim the development of biochemical concepts rather than the mere reporting of confirmatory or inconclusive work will not be published. The Biochemical Journal will not publish material that has been wholly or largely published elsewhere in the same form, in any language, without the consent of the Society. Authors will be required to sign an undertaking to these effects.

- Submission of a paper implies that it has been approved by all the named authors, that all persons entitled to authorship have been so named, that it reports unpublished work that is not under consideration elsewhere, and that if the paper is accepted for publication the authors will transfer to the Biochemical Society the copyright in the paper, which will then not be published elsewhere in the same form, in any language, without the consent of the Society. Authors will be required to sign an undertaking to these effects.

- Authors may suggest potential reviewers for their papers, but the journal is under no obligation to follow such suggestions. Authors may also specify the names of those they wish to exclude from consideration elsewhere, and that if the paper is accepted for publication the authors will transfer to the Biochemical Society the copyright in the paper, which will then not be published elsewhere in the same form, in any language, without the consent of the Society. Authors will be required to sign an undertaking to these effects.

- To allow the reviewers to assess possible overlap with previous work, all submitted papers must be accompanied by duplicate copies of the author's relevant published work and of all related papers in press or under editorial consideration in this or other journals.

- The paragraphs below are a summarized version of the journal's complete instructions to Authors [Biochem. J. (1994) 297, 1-15], of which copies are available free of charge from the editorial office.

- The following types of paper are included in the journal:

- Research Papers are the normal form of publication, and may be of any length that is justified by their content. However, because of pressure on the journal, no single contribution can be more than 25 printed pages. The length of the minimum length required for review purposes makes the experiments and clarity in interpreting them. A guide, the most Research Papers published in the Biochemical Journal are of between six and eight printed pages. A concise well-written paper tends to be published more rapidly.

- Research Communications are short (maximum four printed pages) papers bringing particularly novel and significant findings to the attention of the research community. It is intended that a decision on acceptance or rejection will be made within 2 weeks of receipt, and publication of accepted Communications will follow within 2 months. Research Communications receive full but accelerated reviewing and the criteria of novelty and significance are strictly enforced; Communications are reviewed for accelerated treatment.

- BJ Letters are brief (two printed pages or less) items of scientific correspondence intend- cations and citation of references. Typescripts should expand particular points made in published work, to comment on or criticize work previously published in the Biochemical Journal, to discuss features of novel nucleotide and/or amino acid sequence data of particular biological signif- icance, or to present a new hypothesis. They should not contain extensive new data (which would best be placed in a regular paper) and do not contain any vehicle for publication of preliminary results. If a letter is polemical in nature, a reply will be solicited from other interested parties.

- Reviews will usually be solicited, although unsolicited reviews will be considered for publication. Prospective writers of reviews should consult the Reviews Editor, via the editorial office, and should enclose a short (one typed page) summary of the area they propose to cover.

- Procedure for submission Before preparing papers for the journal, authors should consult a current issue to make themselves familiar with the general format, such as the use of cross-headings, layout of tables and figures and citation of references. Typescripts should be double-spaced throughout (particularly references and table and figure legends) on numbered sheets of uniform size (preferably ISO A4) with wide margins. Output from low-quality dot matrix printers is not acceptable.
