QUICKFIT LABORATORY GLASSWARE

WITH STANDARD INTERCHANGEABLE GROUND GLASS JOINTS

★ Fitted with conical ground glass joints of great precision which safeguard against quantitative losses.
★ Parts are easily replaceable and a small breakage does not render a large apparatus useless.
★ Designed for the greatest degree of simplicity, compactness and strength.
★ Design ensures easy cleaning and consequently greater purity of products.
★ Covers almost every chemical operation in the smallest number of parts.
★ Various fitted-up assemblies are available and special standard joint assemblies can be supplied to your own specifications.

THE SPEKKER* PHOTOELECTRIC ABSORPTIOMETER

is an objective "colorimeter" for use in chemical and biochemical analyses

It is independent of the user's vision
unaffected by mains variations
self-contained and requires no batteries or amplifiers

Indications are independent of light-current response of cells
Is convenient for turbidimetry and for standardisation of vaccines and bacterial emulsions

* Trade Mk. Regd. in Gt. Britain, U.S.A., U.S.R., Germany and Japan

It can be used for routine Kahn or Vernes or similar tests, special liquid cells of small capacity being employed

Biochem. Journ. xxx. 11
Essential Principles of
ORGANIC CHEMISTRY

By C. S. GIBSON

Illustrated. 18s. net

Intended for those who will eventually specialize in organic chemistry and those who will later engage in such sciences as biochemistry, physiology, pharmacology, and therapeutics. The author has had special regard to the importance of laboratory work and the practical side of the subject is specially emphasized, types of apparatus commonly used being given in the appendix.

CAMBRIDGE UNIVERSITY PRESS
BURETTE
FOR MICRO-ANALYSIS

5999 b
Micro-Burette, 10 ml.
in 1/8ths, with Shellbach back, N.P.L., accuracy class B, ground into 500 ml. reservoir, nickel plated pressure bulb, mounted on teak wood base with white glazed tile.

ANAHAEMIN
The active haematopoietic principle of liver

The report of the clinical trials of ANAHAEMIN B.D.H. arranged by the Medical Research Council (Lancet, February 15, 1936, p. 349) shows that by its use pernicious anaemia can be treated successfully with the minimum of inconvenience and expense.

One injection of 1 c.c. of a solution of ANAHAEMIN B.D.H. produces an immediate reticuloocyte response, followed by a striking increase in the number of red blood corpuscles which is maintained for a period of 18 days; indeed, according to the report, "...no other liver extract given in the small amounts used...has produced such striking results'.

The Institute of Chemistry of Great Britain and Ireland

The Institute of Chemistry was established in 1877 to provide the Government and the public with the means of recognising those who have been properly trained and proved to be competent to practise chemistry as a profession. In 1885 the Institute was granted a Royal Charter with definite authority to grant certificates of competency, and to register persons qualified to practise. The aims of the Institute include the elevation of the profession of chemistry and the maintenance of the efficiency, integrity and usefulness of persons practising the same by compelling the observance of strict rules of membership, and by setting up a high standard of scientific and practical efficiency.

Particulars of the Regulations and Examinations of the Institute can be obtained (free) on application to the Registrar.

All communications to be addressed to the Registrar
