APPARATUS WITH INTERCHANGEABLE STANDARD GROUND GLASS JOINTS

The great advantages of apparatus fitted with ground joints which are interchangeable with one another are now so well known that it is hardly necessary to stress them. With the older types of apparatus not so fitted, the breakage of any one part of the apparatus rendered the remainder useless unless it be returned to the manufacturer to grind a new part to fit. This resulted in a great waste of time and expense.

The Institute of Chemistry of Great Britain and Ireland

THE INSTITUTE OF CHEMISTRY was established in 1877 to provide the Government and the public with the means of recognising those who have been properly trained and proved to be competent to practise chemistry as a profession. In 1885 the Institute was granted a Royal Charter with definite authority to grant certificates of competency, and to register persons qualified to practise. The aims of the Institute include the elevation of the profession of chemistry and the maintenance of the efficiency, integrity and usefulness of persons practising the same by compelling the observance of strict rules of membership, and by setting up a high standard of scientific and practical efficiency.

Particulars of the Regulations and Examinations of the Institute can be obtained (free) on application to the Registrar.

All communications to be addressed to the Registrar

30 Russell Square, London, W.C. 1
The removal of Glaxo Laboratories Ltd. to specially planned and greatly extended premises has made possible a further increase in size of its animal colony. The change of locality has created no difficulties of transport. Despatches of these animals continue to be made daily by road, rail, sea and air to all parts of the world.

Increased supplies are likely to result in an increased demand. Thus it is still to every investigator’s advantage to place his orders for the London Strain of Wistar Albino Rat well in advance of his requirements.
