Neuropeptide Gene Expression

Edited by **A J Turner**

Neuropeptides are a rapidly growing class of biological signal molecules. Study of their molecular biology is providing insights into important mechanisms of gene expression. In this book, leading scientists survey the recent progress made in the identification of neuropeptides and the factors regulating their expression including transcription factors, enzymes involved in post-translational processing as well as agents modulating peptide hormone release at synaptic terminals. This book will be of interest to both neuroscientists and those studying gene expression in general.

300 pages August 1994

Temperature Adaptation of Biological Membranes

Edited by **A R Cossins**

This book examines current knowledge of the physical/structural adaptations of membranes to fluctuations in temperature.

New genetic and molecular biology approaches to investigating the underlying machinery are presented in the book. Also included are new perspectives on mechanisms of cold and heat damage, and adaptations which endow enhanced thermoresistance.

Essential reading for anyone studying membrane structure and function: biochemists, biophysicists and physiologists, also all those interested in cold/heat tolerance.

Mitochondria: DNA, Proteins and Disease

Edited by **V M Darley-Usmar** and **A H V Schapira**

Whilst the function of mitochondria in cell metabolism is well understood, the role which dysfunctional mitochondria play in human disease is just emerging, with many mutations and more diseases associated with mitochondrial abnormalities, eg mitochondrial myopathies, encephalopathies and Leber's hereditary optic neuropathy being described regularly. This book aims to bridge the gap between basic research and clinical practice by bringing together the genetic and bioenergetics aspects of mitochondrial metabolism.

Proteolysis and Protein Turnover

Edited by **J S Bond** and **A J Barrett**

Proteolysis participates in an impressive array of biological processes which includes blood clotting, tissue remodelling, nutrient acquisition, antigen processing and the meiotic cycle. In this book, leading experts portray a sense of how the field is moving, highlight the important discoveries and pinpoint the areas where progress is still to be made.

Contents: Thirty-six chapters covered in five sections: Keynote address; Molecular Aspects of Proteolytic Enzymes and Inhibitors; Cellular Aspects of Proteolytic Systems and Mechanisms of Intracellular Proteolysis; Protein Turnover in Tissues/Organisms; Pathological Aspects of Protein Turnover.

*Special Offer on The Biochemical Basis of Biology Series of Videos

Video No. 3: Manipulating DNA New

The Biochemical Basis of Biology Series

E J Wood, University of Leeds

The Biochemical Basis of Biology series of videotapes complement the teaching of Biology by helping teachers illustrate biochemical concepts in a dynamic way not possible with textbooks. They also allow students access to experiments which could never be demonstrated in a school laboratory.

Contents: **Cutting DNA** Shows how the DNA double helix can be cut using restriction enzymes. The emphasis is on the use of microscale techniques. **Electrophoresis of DNA** Graphics with pictures taken in the laboratory have been prepared to demonstrate how agarose gels are used to carry out the electro-phoresis of DNA. **Amplifying DNA** This section shows how a piece of DNA (eg a gene) may be specifically amplified using the Polymerase Chain Reaction. **Cloning DNA** The final section illustrates how a gene is inserted into

a bacterial plasmid and then re-inserted into a bacterium for possible commercial production of a protein.

Format: VHS/60 minutes 1994 £60.00 (+VAT)

Video 1: Cell Structure and Energy Production

This video is divided into 4 sections The electron microscope; Subcellular fractionation; Mitochondrial respiration: the oxygen electrode and the light reaction of photosynthesis.

PAL/NTSC/VHS 60 minutes 1986 £46.00(+VAT)

Video 2: DNA and Protein Synthesis

This is divided into 3 sections, The Measurement of Protein Synthesis by Means of Radioactivity; The Mechanism of Protein Synthesis; Viruses, Bacteriophages and the Hershey and Chase experiments

PAL/NTSC/VHS 45 minutes 1987 £46.00 (+VAT)

***Special Offer — Save £56.00**

Videos 1, 2 & 3 — only £96.00 (+VAT)

New Volume in the Studies in Physiology Series

Cardiovascular Regulation New

Edited by D Jordan, and J M Marshall

Cardiovascular Regulation provides an up-to-date account of our current understanding of the control of the cardiovascular system which is not covered by existing textbooks. Each chapter has numerous summary boxes and also 'Essential Reading' suggestions for additional reading for undergraduates and 'Further Reading' suggestions for postgraduates.

Contents: Central nervous integration of cardiovascular regulation; Some aspects of the integration of the respiratory and cardiovascular systems; Cardiovascular changes associated with behavioural alerting; Cardiovascular changes associated with sleep; Regulation of blood volume; Cardiovascular responses to exercise:

central and reflex contribution; Metabolic control of blood flow with reference to heart, skeletal muscle and brain; Changing perspectives on microvascular fluid exchange.

The Pathophysiology of the Gut and Airways: An Introduction

Edited by P L R Andrews & J G Widdicombe

This book examines the pathophysiological basis of a number of relatively common diseases and disorders of the gut and airways. These two systems share a number of structural and physiological similarities which are reflected in the pathophysiological basis of the diseases reviewed.

1 85578 022 4 Paper 1993 130 pages £16.95

The **Studies in Physiology** series, published on behalf of the Physiological Society, provides students and lecturers alike, with a concise introduction to developments in complex and difficult areas of physiology.

Future topics to be covered include: Neural Control of Skilled Human Movements, An Integrated Approach to Exercise in Man

Molecular Botany

New

Signals and the Environment

Edited by **D J Bowles**, *University of Leeds, UK*,
Biochemical Society Symposium No. 60

Molecular Botany provides a thorough overview of the ways in which environmental stimuli lead to changes within plants. A range of topics are addressed encompassing the role of the cell wall and glycans in signalling events, through to the molecular events regulating defence gene activation and developmental programming.

Neurochemistry of Drug Dependence

Edited by **S Wonnacott** and **G G Lunt**
Biochemical Society Symposium No. 59

This book brings together neurochemical information about drug targets and their mechanisms on the one hand, with psychopharmacological and behavioural studies of drug dependence on the other. This multidisciplinary book will be useful to biochemists, pharmacologists and behavioural scientists.

The Archaeobacteria

Biochemistry and Biotechnology
M J Danson, D W Hough and G G Lunt
Biochemical Society Symposium No. 58

Archaeobacteria explores the biochemistry and molecular biology of these unusual organisms, and then examines the biotechnology potential of them. The 5 main sections of the book cover: ● The archaeobacteria ● Biochemical features of archaeobacteria ● Molecular biological features of archaeobacteria ● Proteins in extreme environments ● Biotechnological potential of the archaeobacteria

Essays in Biochemistry

Volume 28

Edited by **K F Tipton** *Trinity College, Dublin*

Provides students and their lecturers with ten self-contained summaries of rapidly moving areas of biochemistry and molecular biology which are poorly covered in standard student textbooks. It is published in a new format which makes extensive use of illustrations diagrams and tables to enhance its accessibility.

Contents: Metabolic control, C I Pogson et al; The role of mitochondrial HMG-CoA synthase in regulation of ketogenesis, P A Quant; PIG-tailed membrane proteins, A J Turner; Motor neurone disease, R J Guiloff et al; Carnitine and its role in acyl group metabolism, R R Ramsay; Folate/vitamin B12 inter-relationships, J Scott and D Weir; Protein kinase inhibitors, H Hidaka and R Kobayashi; The renin—angiotensin system, T Inagami; Mitochondrial DNA and disease, S R Hammans; Horseradish peroxidase: the analyst's friend, C Ó Fágáin
