B · D · H

B.D.H. Laboratory Chemicals are used as the standard equipment in biochemical laboratories in which important and responsible work is undertaken.

Behind every product which bears the B.D.H. label there is the knowledge gained by many years of experience in the manufacture of reagents of precise and accepted standards of purity.

The Institute of Chemistry of Great Britain and Ireland

THE INSTITUTE OF CHEMISTRY was established in 1877 to provide the Government and the public with the means of recognising those who have been properly trained and proved to be competent to practise chemistry as a profession. In 1885 the Institute was granted a Royal Charter with authority to grant certificates of competency, and to register persons qualified to practise. The aims of the Institute include the elevation of the profession of chemistry and the maintenance of the efficiency, integrity and usefulness of persons practising the same, by compelling the observance of strict rules of membership and by setting up a high standard of scientific and practical efficiency.

Particulars of the Regulations and Examinations of the Institute can be obtained (free) on application to the Registrar.

BIOCHEMISTRY AND MORPHOGENESIS

By JOSEPH NEEDHAM

324 illustrations. 52s. 6d. net

This book, though not a continuation of Dr Needham's earlier work, *Chemical Embryology*, is still concerned with the great problem of the relation between morphology and chemistry. Of possible approaches to this problem greatest attention is here given to the most recent line of research, the biochemical investigation of the morphogenetic hormones. The study of these chemical substances, of fundamental importance for all animal and plant development, including its hereditary aspect, occupies the greater part of the present book.

CAMBRIDGE UNIVERSITY PRESS

BIOCHEMICAL SOCIETY ADVERTISEMENTS

The Committee have decided to place a limited amount of advertising space in the Journal at the disposal of Members of the Society, to enable them to make known such requirements for biochemical materials as cannot be met through the ordinary commercial channels. Short advertisements dealing with requirements of this type will be accepted without charge, and should be sent to the CHAIRMAN OF THE EDITORIAL BOARD, *Biochemical Journal*, NATIONAL INSTITUTE FOR MEDICAL RESEARCH, HAMPSTEAD, LONDON, N.W. 3.

Replies to such advertisements from Laboratories which are able to fulfil the requirements should not, in the first instance, be addressed to the author of the advertisement, but should be sent to Dr W. T. J. MORGAN, LISTER INSTITUTE OF PREVENTIVE MEDICINE, CHELSEA BRIDGE ROAD, LONDON, S.W. 1, who will make the necessary arrangements.

MATERIALS REQUIRED FOR RESEARCH

The Discussion on
**THE MODE OF ACTION
OF CHEMOTHERAPEUTIC AGENTS**

contained in *The Biochemical Journal*, Vol. 36, Parts 1 and 2
will be published separately

JOURNAL OF ENDOCRINOLOGY

At present one volume, consisting of four parts, appears yearly

Subscription Rate: 35s. per volume

CONTENTS FOR PART 2 OF VOL. 3, 1942

- Effect of hormones on cortical degeneration in the mouse adrenal; by H. WARING.
The ketogenic activity of extracts of the anterior pituitary; by C. H. GRAY.
Oogenesis and its relation to the œstrous cycle in the adult mouse; by W. S. BULLOUGH.
The method of growth of the follicle and corpus luteum in the ovary of the mouse; by W. S. BULLOUGH.
Studies of sex hormones in the golden hamster; by O. PECZENIK.
Estrogens and pro-œstrogens related to stilbene and triphenylethylene; by C. W. EMMENS.
The differentiation of œstrogens from pro-œstrogens by the use of spayed mice possessing two separate vaginal sacs; by C. W. EMMENS.
Further experiments on lactation in thyroidectomized rats: the role of the parathyroids; by S. J. FOLLEY, H. M. SCOTT-WATSON, and E. C. AMOROSO.
Effects of œstrogen (stilboestrol) on the sperm-production of adult rams; by M. C. CHANG.
Maintenance and restoration of growth in thyroidectomized rats; by I. W. ROWLANDS.
Gametogenesis and some endocrine factors affecting it in the adult minnow (*Phoxinus levis* L.); by W. S. BULLOUGH.
Administration of non-steroid substances by the tablet technique; by A. S. PARKES.
