THE

BIOCHEM ABSORPTIOEMETER

A RAPID DIRECT READING PHOTOELECTRIC INSTRUMENT for colorimetric analyses

Used with test-tubes or precision all-glass cells.

Specially suitable for vitamin A assay by the Carr-Price reaction.

Six-volt lamp run from battery or constant voltage transformer.

The

TEST TUBE COLORIMETER

A simple and robust scientific photo electric instrument for rapid bio-chemical determinations. It combines a high degree of accuracy with absolute ease of operation. Operates from 2 volt accumulator. Equipped complete with Microammeter as illustrated.

Price 22 gns.

Standards in Hæmoglobinimetry

Standards are now available for the two most convenient colorimetric methods for the determination of hæmoglobin in blood.

GIBSON-HARRISON ARTIFICIAL STANDARD. Follows the absorption spectrum of blood that has been subjected to the alkaline hæmatin procedure of Clegg and King, Brit. Med. J. 1942, ii, 329.

HÆMIN. Provides a satisfactory standard in the cyanhæmatin method of King and Gilchrist, Lancet, 1947, ii, 201.

The Royal Institute of Chemistry of Great Britain and Ireland

PATRON: H.M. THE KING

THE INSTITUTE OF CHEMISTRY was established in 1877 to provide the Government and the public with the means of recognising those who have been properly trained and proved to be competent to practise chemistry as a profession. In 1885 the Institute was granted a Royal Charter with authority to grant certificates of competency, and to register such persons. The aims of the Institute include the elevation of the profession and the maintenance of the efficiency, integrity and usefulness of persons practising the same, by compelling the observance of strict rules of membership and by setting up a high standard of scientific and practical efficiency. The designation “Royal” was conferred on the Institute by a Supplemental Charter in 1944.

Particulars of the Regulations and Examinations of the Institute can be obtained (free) on application to the Registrar
