The determination of ergothioneine. The non-occurrence of ergothioneine in urine. By A. Lawson, H. V. Morley and L. I. Woolf. (With one figure) ................................................................. 513

The esterases of horse blood. 1. The specificity of horse plasma cholinesterase and ali-esterase. By L. M. Sturgoe and V. P. Whittaker. (With five figures) ......................................................... 518

The esterases of horse blood. 2. The specificity of horse erythrocyte cholinesterase. By L. A. Mounter and V. P. Whittaker. (With two figures) ............................................................. 525

Quantitative studies on the avidity of naturally occurring substances for trace metals. 1. Amino-acids having only two ionizing groups. By A. Albert. (With three figures) ................................................. 531

The amino-acid composition of the protein material in soil. By J. M. Brenner. (With one figure) .............................................................. 538

Studies in congenital porphyria. 3. The incorporation of 15N into the haem and glycine of haemoglobin. By C. H. Gray, I. M. H. Muiu and A. Neuberger. (With three figures) ......................................... 542

Biochemistry of locusts. 3. Insectorubin: the redox pigment present in the integument and eyes of the desert locust (Schistocerca gregaria Forsk.), the African migratory locust (Locusta migratoria migratorioides R. & F.) and other insects. By T. W. Goodwin and S. Sri Sukh. (With five figures) ........ 549

Biochemistry of locusts. 4. Insectorubin metabolism in the desert locust (Schistocerca gregaria Forsk.) and the African migratory locust (Locusta migratoria migratorioides R. & F.). By T. W. Goodwin. (With two figures) ................................................................. 554

Vitamin B₁-like activity of 2-amino-5-methylthiazole-4-carboxylic acid. By G. Di Maggio. (With one figure) .................................................................................................................. 562

The heterogeneity of the glycerophosphate fraction of rat liver. By J. Olley and M. Blewett. (With two figures) ............................................................. 564

The quantitative reactions of thiols and disulphides with silver nitrate. By R. Cecil. (With nine figures) ................................................................. 572

Separation of the lower fatty acids as anions by paper chromatography. By F. Brown ................................................................. 598

Manometric determination of L-aspartic acid in L-asparagine. By H. A. Krebs ................................................................. 605

The isolation from normal tobacco leaves of nucleoprotein with some similarity to plant viruses. By N. W. Pirie ................................................................................................................ 614

The reaction between proteins and reducing sugars in the ‘dry’ state. Dried human blood plasma. By C. H. Lea, R. S. Hannan and R. I. N. Greaves. (With three figures) ................................................. 626

The metabolism of tyrosine and phenylalanine in premature infants: the effect of large doses. By L. I. Woolf and M. E. Edmunds. (With seven figures) ................................................................. 630

Sodium ethanemonothiophosphonate. A weak antidote to mustard gas. By E. R. Holiday, J. St L. Philpot and L. A. Stocken .................................................................................................................. 637

Proceedings of the Biochemical Society

Some comparative aspects of the biochemistry of fish. By E. Baldwin ................................................................. liv

The proteins of fish. By G. Hamoir ................................................................................................................ 1ii

The chemistry and metabolism of the nitrogenous bases in fish. By J. M. Seward ................................................................. 1ii

The chemistry and metabolism of fats in fish. By J. A. Lovern ................................................................................................................ 1iv

Carotenoids in fish. By T. W. Goodwin ................................................................................................................ 1iv

Bile salts of fish. By G. A. D. Haslewood ................................................................................................................ 1iv

Economic aspects of the fishing industry. By C. L. Cutting ................................................................................................................ 1iv

[P.T.O.]
