Instructions to Authors

**General policy** The Biochemical Journal publishes papers in English in all fields of biochemistry and molecular biology, provided that they make a sufficient contribution to knowledge in these fields. Papers may include new results obtained experimentally, descriptions of new experimental methods of biochemical importance, or novel theoretical contributions. Novel experimental methods of biochemical importance, provided that they make a sufficient contribution to biochemistry and cellular and molecular biology, will be published free of charge in APs, provided the use of colour is deemed scientifically necessary by the reviewers.

**Procedure for submission** These instructions do not replace the official Biochemical Journal Instructions to Authors (http://www.biochemj.org). Authors are encouraged to refer to these for overall guidelines on submitting a paper. Before preparing papers for the journal, authors should consult a current issue to make themselves familiar with the general format, such as the use of cross-headings, layout of tables and figures and citation of references. A full page of text in the Biochemical Journal contains approximately 1290 words; when calculating the printed length of papers, allowance must be made for the space occupied by tables and figures and the number of text words reduced accordingly.

The numerical system of references must be used. A reference to ‘unpublished work’ must be accompanied by the names of all persons concerned; a reference to a ‘personal communication’ must be supported by written permission for the quotation from the person or persons concerned; both of these types of citation are permitted in the text only, not in the list of references.

**Submit manuscripts online** Authors should submit manuscripts electronically using the Online Submission and Review System available at http://www.biochemj.org

**Accepted Manuscripts** Accepted Manuscripts are published online in PDF format as soon as they are accepted, unless on submission the author requests that this not be done. Accepted Manuscripts are listed in and accessible through PubMed.

**Open access option** For more information about making a paper open access, see www.portlandpresspublishing.com/content/open-access-policy

**Queries and correspondence** Authors in China should contact: Dr Lin Huo, Institute of Biophysics, Chinese Academy of Sciences, Room 202015, 15 Datun Road, Chaoyang District, Beijing 100101 (telephone +86 10 64885732; email editorial@biochemj.cn). Authors in the rest of the world should contact: Biochemical Journal, Portland Press Limited, Third Floor, Charles Darwin House, 12 Roger Street, London WC1N 2JU, U.K. (telephone +44 20 7685 2410; fax +44 20 7685 2469; email editorial@portlandpress.com).

**Colour figures** Colour figures are published free of charge provided that the use of colour is deemed scientifically necessary by the reviewers.

**Multimedia adjuncts** The Biochemical Journal offers authors the opportunity to enhance their papers with multimedia adjuncts (e.g. time-lapse movies, three-dimensional structures, animated schemes). These will be submitted to peer review alongside the manuscript. To submit a paper with a multimedia adjunct, please attach the file when you submit your manuscript electronically. Preferred formats are QuickTime for time-lapse movies, PDB for structures and Flash for animated schemes. There is no extra charge associated with the publication of a multimedia adjunct online.

**COPE** The Biochemical Journal is a member of the Committee on Publication Ethics and endorses its guidelines, which are available at http://publicationethics.org.uk

**Value Added Tax (VAT) on online-only and ‘combined’ subscriptions:**

- VAT on online-only
- VAT on ‘combined’ subscriptions
- VAT on supplies to subscribers within the UK, and to non-registered subscribers elsewhere in the EU. If in the EU please state your VAT number otherwise VAT may be charged at the appropriate national rate.

**Electronic archive** The archive of Portland Press journals is available to purchasers either as an annual subscription or for a perpetual access and annual hosting fee. Contact licensing@portlandpress.com for more information.

**Subscription Department**

Portland Press Third Floor, Charles Darwin House, 12 Roger Street, London WC1N 2JU, U.K.

(telephone 020 76852444; fax 020 76852468; email licensing@portlandpress.com).

**Advertise**

Enquiries about advertising should be addressed to advertising@portlandpress.com.

The paper and cover-boards used in this journal are sourced from sustainable, managed and recycled commercial forests and are fully recyclable. The bleaching process used for the pulp is 100% ECF (elemental chlorine free).
Review Article

Taste information derived from T1R-expressing taste cells in mice
R. Yoshida and Y. Ninomiya
525–536

Research Papers

Soluble CD109 binds TGF-β and antagonizes TGF-β signalling and responses
C. Li, M.A. Hancock, P. Sehgal, S. Zhou, D.P. Reinhardt and A. Philip
537–547

Identification of novel members of the bacterial azoreductase family in Pseudomonas aeruginosa
V. Crescente, S.M. Holland, S. Kashyap, E. Polycarpou, E. Sim and A. Ryan
549–558

Directed evolution of α class glutathione transferases reveals a site that regulates catalytic efficiency and masks co-operativity
I. Axarli, A.W. Muleta, D. Vlachakis, S. Kossida, G. Kotzia, A. Maltezos, P. Dhavala, A.C. Papageorgiou and N.E. Labrou
559–570

Stoichiometry of the eIF2B complex is maintained by mutual stabilization of subunits
N.C. Wortham, J.D. Stewart, S. Harris, M.J. Coldwell and C.G. Proud
571–580

Probing the enzyme kinetics, allosteric modulation and activation of α1- and α2-subunit-containing AMP-activated protein kinase (AMPK) heterotrimeric complexes by pharmacological and physiological activators
581–592

Substrate specificity, kinetic properties and inhibition by fumonisin B1 of ceramide synthase isoforms from Arabidopsis
K.D. Luttgeharm, E.B. Cahoon and J.E. Markham
593–603

Circulating FGF21 proteolytic processing mediated by fibroblast activation protein
E.Y. Zhen, Z. Jin, B.L. Ackermann, M.K. Thomas and J.A. Gutierrez
605–614

Effect of SLC26 anion transporter disease-causing mutations on the stability of the homologous STAS domain of E. coli DauA (YchM)
X. Bai, T.F. Moraes and R.A.F. Reithmeier
615–626

Role of Munc13-4 as a Ca2+-dependent tether during platelet secretion
M.C. Chicka, Q. Ren, D. Richards, L.M. Hellman, J. Zhang, M.G. Fried and S.W. Whiteheart
627–639

AZD8797 is an allosteric non-competitive modulator of the human CX3CR1 receptor
L. Cederblad, B. Rosengren, E. Ryberg and N.-O. Hermansson
641–649

The mechanistic study of Leishmania major dihydro-orotate dehydrogenase based on steady-and pre-steady-state kinetic analysis
R.A.G. Reis, P. Ferreira, M. Medina and M. Cristina Nonato
651–660
Electrostatics and N-glycan-mediated membrane tethering of SCUBE1 is critical for promoting bone morphogenetic protein signalling

W.-J. Liao, K.-C. Tsao and R.-B. Yang

661–672
