CONTENTS OF VOLUME 51, NO. 2, 1952

(All rights reserved)

Polarization of the fluorescence of macromolecules. 1. Theory and experimental method. By G. Weber. (With four figures) .................................................. 145

Polarization of the fluorescence of macromolecules. 2. Fluorescent conjugates of ovalbumin and bovine serum albumin. By G. Weber. (With eleven figures) .................................. 155

A study of the adsorption of dyes on bovine serum albumin by the method of polarization of fluorescence. By D. J. R. Laurence. (With fourteen figures) .......... 168

Enzymes of the potato concerned in the synthesis of starch. 1. The separation and crystallization of Q-enzyme. By G. A. Gilbert and A. D. Patrick. (With four figures) ................... 181

Enzymes of the potato concerned in the synthesis of starch. 2. The separation of phosphorylase. By G. A. Gilbert and A. D. Patrick. (With four figures) .................. 186

The component acids of the milk fat of a grey Atlantic seal. By M. L. Meara ................................................. 190

The liberation of chloride ions from organic chloro compounds by tissue extracts. By H. G. Bray, W. V. Thorpe and D. K. Vallance. (With four figures) .............. 193

Studies in detoxication. 43. A study of the arylsulphatase activity of takadiastase towards some phenolic ethereal sulphates. By D. Robinson, J. N. Smith, B. Spencer and R. T. Williams. (With four figures) ................. 202

Seasonal changes in the carbohydrates of the Jerusalem artichoke tuber. By J. S. D. Bacon and R. Loxley. (With two figures) .......................................................... 208

The estimation of acetone bodies. By C. Thin and A. Robertson. (With one figure) ........................................... 218

The preparation and properties of 8-glucuronidase. 3. Fractionation and activity of homogenates in isotonic media. By P. G. Walker. (With five figures) .............. 223

The chemical composition and structure of the yeast cell wall. By D. H. Northcote and R. W. Horne. (With Plates 1 and 2) ......................................................... 232

Flavin-adenine dinucleotide and diaphorase in resting and germinated spores, and vegetative cells of Bacillus subtilis and Bacillus megatherium. By R. E. J. Spencer and J. F. Powell .............. 239

Pseudo-cholinesterase activity in the central nervous system. By M. G. Ord and R. H. S. Thompson ................. 245

The metabolism of short-chain fatty acids in the sheep. 1. Fatty acid utilization and ketone body production by rumen epithelium and other tissues. By R. J. Pennington .......... 251

Chemical composition of a sample of mycelium of Penicillium griseofulvum Dierckx. By W. R. Smithies .......... 259

The component acids of the fats of some Indian fresh-water fish. By S. P. Pathak and C. V. Agarwal .............. 264

The formation of hydrogen peroxide by a-radiation in the presence of the enzyme carboxypeptidase. By W. M. Dale, J. V. Davies, C. W. Gilbert, J. P. Keene and L. H. Gray .......... 268

A structural relationship between frequentin and palitantin. By P. J. Curtis and L. A. Duncanson. (With one figure) .................................................. 276

Oxidation of pyruvic acid oxime by soil organisms. By J. H. Quastel, P. G. Scholefield and J. W. Stevenson. (With five figures) ........................................... 278

Addendum—The isolation of bacteria from soil perfused with pyruvic acid oxime. By J. H. Quastel, P. G. Scholefield and J. W. Stevenson ........................................ 284

The isolation of androst-16-en-3x-ol from women's urine. By B. W. L. Brooksbank and G. A. D. Haslewood ......... 286
The mechanism of fat absorption. By A. C. Frazer  
Comparative aspects of lipid absorption and excretion. By R. P. Cook  
Defective fat absorption in man. By J. M. French  
Lipid synthesis from small molecules. By G. Popjak  
Aspects of fat metabolism in the ruminant with special reference to the biosynthesis of milk fat. By S. J. Folley  
The enzymic oxidation of fatty acids. By A. L. Lehninger  
Essential fatty acids and their relation to pyridoxine. By H. M. Sinclair  

INDEX OF AUTHORS

Agarwal, C. V. 264  
Bacon, J. S. D. 208  
Birkinshaw, J. H. 271  
Bray, H. G. 193  
Brooksbank, B. W. L. 286  
Brown, F. 237  
Cook, R. P. xiii  
Curtis, P. J. 276  
Dale, W. M. 268  
Davies, J. V. 268  
Duncanson, L. A. 276  
Folley, S. J. xv  
Frazer, A. C. xiii  
French, J. M. xiv  
Gilbert, C. W. 268  
Gilbert, G. A. 181, 186  
Goodwin, T. W. 213  
Gray, L. H. 268  
Haslewood, G. A. D. 286  
Horne, R. W. 252  
Keene, J. P. 268  
Laurence, D. J. R. 168  
Lehninger, A. L. xv  
Loxley, R. 208  
Mearns, M. L. 190  

Northcote, D. H. 232  
Ord, M. G. 245  
Pathak, S. P. 264  
Patrick, A. D. 181, 186  
Pennington, R. J. 251  
Popjak, G. xiv  
Powell, J. F. 239  
Quastel, J. H. 278, 284  
Robertson, A. 218  
Robinson, D. 202  
Scholesfield, P. G. 278, 284  
Sinclair, H. M. xvi  
Smith, J. N. 202  
Smithies, W. R. 259  
Spencer, B. 202  
Spencer, R. E. J. 239  
Stevenson, J. W. 278, 284  
Thin, C. 218  
Thompson, R. H. S. 245  
Thorpe, W. V. 193  
Vallance, D. K. 193  
Walker, P. G. 223  
Weber, G. 145, 155  
Williams, R. T. 202  
Willmer, J. S. 213
