The *Biochemical Journal* is conducted by the Biochemical Society and is published by the Cambridge University Press. The *Journal* is issued in multiple volumes per year. Each volume consists of approximately 700 pages, published in parts at intervals of one month.

The Biochemical Society was instituted solely for the advancement of the Science of Biochemistry, and holds meetings at different centres for the communication of original papers, and for the discussion of current problems. Persons interested in Biochemistry are eligible for election. Members whose subscriptions are not in arrears are entitled to receive the *Biochemical Journal* without further payment. Further information may be obtained from the Hon. Secs., Professor R. H. S. Thompson, Department of Chemical Pathology, Medical School, Guy's Hospital, London, S.E. 1, and Professor F. L. Warren, Department of Biochemistry, London Hospital Medical College, Turner Street, London, E. 1, or from the Hon. Treas., F. A. Robinson, Esq., c/o Allen and Hanburys, Ltd., Bethnal Green, London, E.C. 2.

Subscriptions to the *Biochemical Journal*. For non-members of the Biochemical Society the subscription to the *Biochemical Journal* is £3. 10s. 0d. per volume, payable in advance to the Cambridge University Press, Bentley House, 200 Euston Road, London, N.W. 1, to F. A. Robinson, Esq., c/o Allen and Hanburys, Ltd., Bethnal Green, London, E.C. 2, or to any bookseller. In the United States of America the *Journal* may be purchased from the Cambridge University Press American Branch, 32 East 57th Street, New York, 22 (subscription price $12.25 per volume).

Communications respecting the sale of single issues or back numbers of the *Journal*, Volumes 20–52, should be addressed to the Cambridge University Press, Bentley House, 200 Euston Road, London, N.W. 1. Volumes 1–15 have been reproduced and are available from Messrs William Dawson & Sons, Ltd., 102 Wigmore Street, London, W. 1, at the prices given below.

Claims for the replacement of *Journals* lost in transmission will not be entertained if they are received later than three months after the date of the posting of the *Journal*.

NOTES FOR CONTRIBUTORS

Papers submitted for publication in the Biochemical Journal should be written concisely. Special attention is directed to the sections below concerning the preparation of the typescript. Strict observance of these requirements will shorten the interval between the receipt of a paper and its publication. Typescripts which are not concise or which do not conform to the conventions of the Biochemical Journal will be returned to authors for revision.

The attention of authors is drawn to a pamphlet entitled General Notes on the Preparation of Scientific Papers published for the Royal Society by the Cambridge University Press (2s. 6d., post free 2s. 9d.).

A detailed list of Suggestions to Authors, Abbreviations and Symbols, and Notes on Usage and Conventions applicable to the Biochemical Journal was published in August 1953 (Biochem. J. 1953, 55, 1) and copies may be obtained from the Editorial Office (Biochemical Journal), National Institute for Medical Research, The Ridgeway, Mill Hill, London, N.W. 7, price 1s. post free.

Reprints. Where at least one author of a paper is a member of the Biochemical Society, twenty-five reprints are supplied free of cost. If the supply of paper permits, an author may purchase additional reprints if he notifies the Press on the appropriate form immediately the proof of the paper is received, but only in exceptional circumstances will more than a total of 175 additional reprints be supplied. (Communications respecting the purchase of reprints should be addressed to the University Press, Cambridge.)

General. Submission of a paper to the Editorial Board will be held to imply that it presents the results of original research not previously published, that it is not under consideration for publication elsewhere, and that if accepted for the Biochemical Journal it will not be published otherwise in the same form, either in English or in any other language, without the consent of the Editorial Board.

Contributors who reside outside Great Britain are requested to nominate somebody in Great Britain who is willing to correct the proofs of their papers. Papers from such contributors should be accompanied by a statement of the number of reprints required.

Unless confusion would otherwise arise, contributors' names should appear as initials (but female authors may use one given name in full) and surnames only, without titles or suffixes. The name and address of the laboratory where the work was performed should be given. Any necessary descriptive material regarding the author, e.g. Beit Memorial Fellow, or details of financial support, should appear as a footnote on the first page or, preferably, in the Acknowledgements at the end of the paper.

Typescripts should carry an indication of the name and address of the person to whom the proof of the paper is to be sent, and should give also a shortened version of the paper's title, not exceeding forty-five letters and spaces in length, suitable for a running title in the published pages of the work.

It would greatly facilitate the editors' task and thus be to the advantage of the author if, when submitting a paper which is part of a series, the author were to enclose reprints of the preceding immediately relevant parts.

p.t.o.
Form of Papers Submitted for Publication.
The onus of preparing a paper in a form suitable for sending to press lies in the first place with the author. Authors should consult a current issue in order to make themselves familiar with the practice of the Biochemical Journal concerning typographical conventions, use of cross-headings, layout of tables, citation of references, etc. The need for editorial revision of badly prepared typescript will lead to delay in publication for which the Editors cannot accept responsibility. Papers on specialized subjects should be presented so that they are intelligible to the ordinary reader of the Journal. Sufficient information should be included to permit repetition of the experimental work.

Papers intended for publication should be in double-spaced typing on sheets of uniform size with wide margins. Top copies only should be submitted. The paper should be written in English.

Generally speaking, papers should be divided clearly into parts and, in most cases, these should be as follows: (a) Introduction, containing the reasons for doing the work; (b) Experimental methods: with chemical papers the experimental part will normally appear towards the end, but otherwise should follow the introduction; (c) Results: these should be given concisely: tables or figures are often the best form, but the use of both to illustrate the same data will only rarely be permitted; illustrative protocols only should be included; (d) Discussion: it is desirable that the presentation of the results and the discussion of their significance should be considered separately; (e) Summary: a summary, about 3% of the length of paper, should be included; the paragraphs of the summary should be numbered; (f) Acknowledgements; (g) References.

In the Introduction, Results, Discussion and Summary sections of papers the use of abbreviations should be very sparing. Thus, abbreviations for units are to be used, but not contractions such as 'soln.' or 'recryst.' or chemical symbols as abbreviations for elements, groups or compounds, unless this use is justified by special circumstances.

Illustrations. Illustrations, which should be approximately twice the size of the finished block, should each be on a separate sheet and packed flat; they should bear the author's name and the title of the paper on the back. Diagrams should be in Indian ink and should be drawn on plain white paper, Bristol board, faintly blue-lined graph paper, tracing paper or tracing cloth. Curves based on experimental data should carry clear indications of the experimentally determined points. Letters, numbers, etc., should be written lightly in pencil. Legends and captions should be typed on a separate sheet from the illustrations and numbered correspondingly. Figures should be comprehensible without reference to the text.

Diagrams which do not conform with the above directions may have to be redrawn by the Press and the expense charged to the author.

Lines in line drawings should be sufficiently thick to stand reduction by the Press, which is usually to one-half or one-third. The pamphlet issued by the Royal Society (1950), General Notes on the Preparation of Scientific Papers, gives specimen figures.

Tables. Tables should carry headings describing their content and should be comprehensible without reference to the text. The units in which the results are expressed, e.g. g./100 ml., should be given at the top of each column, and not repeated on each line of the table.

The following, from The Presentation of Papers for the Journal of the Chemical Society, 1952, may be noted: 'Care is needed for statement of powers in column headings. An entry "2" in a column headed "10^k" means that the observed value was 0.002. If the heading reads "10^{-k}", then the observed value was 2000. This form, 10^k, should always be used.'

Tables should be typed on separate sheets and their approximate position in the text should be indicated. Words or numerals should be repeated on successive lines; 'ditto' or ',,,' are not to be used.

Footnotes. These should be avoided in the text as far as possible. Where they must be used, as in tables, reference is made by the symbols *, †, ‡, §, ||, in that order.
FORTHCOMING PAPERS

It is hoped to publish the following papers in the next issue of the Biochemical Journal:

Synthesis of L-ascorbic acid in plants and animals. By F. A. Isherwood, Y.-T. Chen and L. W. Mapson

Isolation of d-glyceric acid from cress seedlings and its relationship to the synthesis of L-ascorbic acid. By F. A. Isherwood, Y.-T. Chen and L. W. Mapson

Biological synthesis of L-ascorbic acid: the conversion of L-galactono-γ-lactone into L-ascorbic acid by plant mitochondria. By L. W. Mapson, F. A. Isherwood and Y.-T. Chen

Oxidative phosphorylation coupled with the oxidation of α-ketoglutarate by heart-muscle sarcosomes. 2. P:O ratio. By E. C. Slater and F. A. Holton

The analysis of adenosine triphosphate and adenosine diphosphate preparations by paper ionophoresis. By H. E. Wade and D. M. Morgan

The distribution of ascorbic acid between the particulate and non-particulate components of adrenal and liver cells. By P. Hagen

Bio-synthesis of fatty acids by slices and cell-free suspensions of mammary gland. By G. Popjak and A. Tietz

Paper-chromatographic analysis of Dakin’s samples of ‘β-hydroxyglutamic acid’. By C. E. Dent and Dorothy L. Fowler

Chemical action of X-rays on nucleic acids and related substances in aqueous systems. 2. The mechanism of the action of X-rays on nucleic acids in aqueous systems. By G. Scholes and J. Weiss

Organic acid metabolism of Penicillium chrysogenum. 1. Lactate and acetate. By D. J. D. Hockenhull, Mary Herbert, A. D. Walker, G. D. Wilkin and F. G. Winder

The fission of tobacco mosaic virus and some other nucleoproteins by strontium nitrate. By N. W. Pirie

The action of some α-amylases on amylose. By R. Bird and R. H. Hopkins

The purification of aconitase. By J. F. Morrison

Studies on the determination of the sequence of amino acids in peptides and proteins:

2. The separation of the methyl esters of N-2:4-dinitrophenyl derivatives of amino acids by adsorption chromatography and the free amino groups of insulin. By C. M. Fletcher, A. G. Lowther and W. S. Reith

3. The synthesis of 3-(4′-dimethylamino-3′:5′-dinitrophenyl)hydantoin derivatives of various amino acids, and their use for the determinations of N-terminal amino acids. By G. G. Evans and W. S. Reith

4. The synthesis of 3-(4′-dimethylamino-3′:5′-dinitrophenyl)-2-thiodyantoin derivatives of various amino acids, and their use for aminocid-squence determinations. By W. S. Reith and N. M. Waldron

The extent of conversion of food protein to microbial protein in the rumen of the sheep. By I. W. McDonald

Purification and properties of phosphoprotein phosphatase from ox spleen. By T. A. Sundararajan and P. S. Sarma

The synthesis of coenzyme A by Lactobacillus arabinosus 17–5. By W. S. Pierpoint and D. E. Hughes

The mechanism of β-amylase action:

1. ‘Multichain’ action on amylose. By R. H. Hopkins and B. Jelinek

2. ‘Multichain’ action of amylose fission products. By R. Bird and R. H. Hopkins

The formation of d-3-phosphoglyceric acid from pentoses by Escherichia coli. By E. D. Bergmann, U. Z. Littauer and B. E. Volcani

Synthesis of cellulose by Acetobacter xylinum. 1. Micromethod for the determination of cellulose. By M. Schramm and Shlomo Hestrin

Biochemical studies of toxic agents. 5. Observations on the fate of 35S-labelled arylsulphuric acids following their administration to the rat. By Joyce B. Hawkins and L. Young

Levels of enzymes of the direct oxidative pathway of carbohydrate metabolism in mammalian tissues and tumours. By Gertrude E. Glock and Patricia McLean
The Biochemical Journal is conducted by the Biochemical Society and is published by the Cambridge University Press. The Journal is issued in multiple volumes per year. Each volume consists of approximately 700 pages, published in parts at intervals of one month.

The Biochemical Society was instituted solely for the advancement of the Science of Biochemistry, and holds meetings at different centres for the communication of original papers, and for the discussion of current problems. Persons interested in Biochemistry are eligible for election. Members whose subscriptions are not in arrears are entitled to receive the Biochemical Journal without further payment. Further information may be obtained from the Hon. Secs., Professor R. H. S. Thompson, Department of Chemical Pathology, Medical School, Guy's Hospital, London, S.E. 1, and Professor F. L. Warren, Department of Biochemistry, London Hospital Medical College, Turner Street, London, E. 1, or from the Hon. Treas., F. A. Robinson, Esq., c/o Allen and Hanburys, Ltd., Bethnal Green, London, E.C. 2.

Subscriptions to the Biochemical Journal. For non-members of the Biochemical Society the subscription to the Biochemical Journal is £3. 10s. 0d. per volume, payable in advance to the Cambridge University Press, Bentley House, 200 Euston Road, London, N.W. 1, to F. A. Robinson, Esq., c/o Allen and Hanburys, Ltd. Bethnal Green, London, E.C. 2, or to any bookseller. In the United States of America the Journal may be purchased from the Cambridge University Press American Branch, 32 East 57th Street, New York, 22 (subscription price $12.25 per volume).

Communications respecting the sale of single issues or back numbers of the Journal, Volumes 20–54, should be addressed to the Cambridge University Press, Bentley House, 200 Euston Road, London, N.W. 1. Volumes 1–15 have been reproduced and are available from Messrs William Dawson & Sons, Ltd., 102 Wigmore Street, London, W. 1, at the prices given below.

Claims for the replacement of Journals lost in transmission will not be entertained if they are received later than three months after the date of the posting of the Journal.

WOOTTON, I. D. P. & WIGGINS, H. S. Studies in the bile acids. 2. The non-ketonic acids of human bile 292
WORK, E. see LINDEN, O. 554, 562
WORMALL, A. see ALMOND, A. E. xxxiii
WURZEL, M. see BERGMANN, F. 888
WYATT, G. R. & COHEN, S. S. The bases of the nucleic acids of some bacterial and animal viruses: the occurrence of 5-hydroxymethylcytosine 774
YEMM, E. W. & FOLKES, B. F. The amino acids of cytoplasmic and chloroplastic proteins of barley 700
YOUNG, L. see HAWKINS, J. B. ix
Index of Subjects

Note. Entries marked with an asterisk (*) refer to communications made in title only. Entries marked with a section mark ($) refer to contributions to Symposia. Small roman numerals refer to pages in Proceedings of the Biochemical Society.

Acetanilides, substituted, and related compounds, fungicidal activity of (Clark, N. G. & Hams, A. F.) 839
Acetate and glucose, observations on oxidation of, by lactating sheep mammary tissue in vitro (Duncombe, W. G. & Glascoc, R. F.) xxiii
Acetate, production of keto acids from, by a vibrio (Dagley, S. & Patel, M. D.) xxxvi
3β-Acetoxysteroids, precipitation by digitonin (Haalam, R. M. & Klyne, W.) 340
Acetyl groups, incorporation of 14C from cystine into (Arstein, H. R. V. & Crawhall, J. C.) 290
Acetylacetone, use in estimation of formaldehyde (Nash, T.) 418
Acetyloxybenzene metabolism in electrically stimulated slices of cerebral cortex (Rowell, E. V.) v
Acid anhydrides, enzymic hydrolysis of (Bergmann, F., Wurzel, M. & Shimoni, E.) 888
Acids, bile, studies in (Wootton, I. D. P. & Wiggins, H. S.) 292
Acids, component, of milk fats of Balaoenoptera physalus (finner whale) (Cama, J. S. & Mears, M. L.) 365
Acids, fatty see Fatty acids
Acids, phenolic, excretion in urines of rat (Boscott, R. J. & Greenberg, S. M.) xviii
Aconitase in Pseudomonas fluorescens (Kogut, M. & Podoeki, E. P.) 800
Aconitases, purification and properties (Morrison, J. F.) iv cisAconitate in pig heart brain (Coxon, R. V.) 545
Aconitic acid, chromatography of, estimation of (Isaehwood, F. A. & Hanes, C. S.) 824
Adaptation, simultaneous (Kogut, M. & Podoeki, E. P.) 800
Adenine nucleotide specificity, kinetics of (Slater, E. C. & Holton, F. A.) 530
Adenosine diphosphate and oxidative phosphorylation in heart-muscle sarcomeres (Slater, E. C. & Holton, F. A.) 530
Adenosine diphosphate in muscle of tortoise (Caldwell, P. C.) 458
Adenosine diphosphate, protection of α-ketoglutaric oxidase and succinic oxidase by (Slater, E. C. & Clodan, K. W.) 506
Adenosine monophosphate and oxidative phosphorylation in heart-muscle sarcomeres (Slater, E. C. & Holton, F. A.) 530
Adenosine triphosphatase activities of skeletal-muscle mitochondria (Chapall, J. B. & Perry, S. V.) 586
Adenosine triphosphatase activity in intestinal mucosa (Hele, M. P.) 857
Adenosine triphosphatase in brain (Gordon, J. J.) 812; (Pratt, O. E.) 140
Adenosine triphosphate and oxidative phosphorylation in heart-muscle sarcomeres (Slater, E. C. & Holton, F. A.) 530
Adenosine triphosphatase as a primer for fatty acid oxidation (Judah, J. D. & Rees, K. R.) 664
Adenosine triphosphatase as competitive inhibitor of 6-phosphogluconate dehydrogenase (Glock, G. E. & McLean, P.) 400
Adenosine triphosphatase, concentration in rat muscle, and effects of cortisone, deoxycorticosterone and adrenalec
Adenosine triphosphate in muscle of tortoise (Caldwell, P. C.) 458
Adenosine triphosphate in oxidation of glycerol by mycobacteria (Hunter, G. J. E.) 320
Adenosine triphosphate, 32P-labelled, preparation of (Hems, R. & Bartley, W.) 434
Adipic acid, chromatography of, estimation of (Isaehwood, F. A. & Hanes, C. S.) 824
Adrenal steroids, effect on active transport of sodium and potassium ions in yeast (Conway, E. J. & Hingerty, D.) 455
Adrenal steroids, effect on aspects of organic and inorganic metabolism (Conway, E. J. & Hingerty, D.) 447
Adrenalecromized rats, deoxycorticosterone acetate and cortisone on response of, to hypotonic load (Cole, D. F.) xiii
Aerobacter aerogenes, dissimulation of citric acid by (Dagley, S. & Dawes, E. A.) xvi
Affinities of enzymes for substrates and inhibitors, effect of pH (Dixon, M.) 162
Agave vera cruz Mill., carbohydrates of (Srinivasan, M. & Bhatia, I. S.) 286
Agglutination of bacteria by polyamines amino acids (Katalski, E., Bichowski-Slomnitzki, L. & Volcani, B. E.) 671
Alanine, incorporation of 14C from cystine into (Arstein, H. R. V. & Crawhall, J. C.) 290
Alanine, N-benzoyl derivative, chromatography of (Arstein, H. R. V. & Neuberger, A.) 271
Alkalitreated proteins, hydrolysaties of, optical form of glutamic acid in (Wiltheir, G. H.) 46
Alternaria tenuis, alternariol and derivatives, metabolic products from (Raiiickstr, H., Stickings, C. E. & Thomas, R.) 421
Alternariol and derivatives, metabolic products of Alterna
Amaranthus caudatus L. leaves, glycinebetaine content of (Cromwell, B. T. & Rennie, S. D.) 189
Amines, reaction of catechol derivatives with, in presence of oxidizing agent (Hackman, R. H. & Todd, A. R.) 631
Amino acid incorporation by fragmented staphylococci (Gale, E. F. & Folkes, J. P.) xi
Amino acid structure, effect on stabilities of complexes formed with metals of group II of periodic classification (Perkins, D. J.) 649
Amino acid, sulphur-containing, isolation from cat urine (Westall, R. G.) 244
Amino acids and other ampholytes of urine (Westall, R. G.) 244
Amino acids, assimilation by bacteria (Gale, E. F. & Folkes, J. P.) 721, 730; (Samuels, P. J.) 441
Amino acids, breakdown in fermentation mixtures of minced kale and water (Robertson, H. A. & Barnett, A. J. G.) xx
Amino acids, determination by 44Cu in salmine (Corfield, M. C. & Robson, A.) 517
Amino acids from mucoprotein of sheep (McCre, J. F.) 132
Brain dispersion, lipids of, incorporation of labelled phosphate into (Dawson, R. M. C.) 507
Brain, phosphatases of (Gordon, J. J.) 812
Brain, proportion of body weight demonstrable by histological techniques in (Pratt, O. E.) 140
Brain, pyruvate oxidation by (Coxon, R. V.) 545
Brain, rat, glycerylphosphorylcholamine in (Ansell, G. B. & Norman, J. M.) 768
Brain, rat, protein synthesis in (Gaitonde, M. K. & Richter, D.) 193
Brain slices, nucleic acids of, incorporation of radioactive phosphate into (Deluca, H. A., Rossiter, R. J. & Strickland, K. P.) 193
Brain slices, pentensucule acids of, factors affecting incorporation of radioactive phosphate into (Findlay, M., Rossiter, R. J. & Strickland, K. P.) 200
Butterfat, branched-chain fatty acids of (Hansen, R. P. & Shand, K. P.) vi
ß-Butyrate, formed from lower fatty acids by Gram-negative cocci (Elsden, S. R. & Lewis, D.) 183
Cadmium ions in aqueous solution, complexes of simple peptides with (Perkins, D. J.) xxviii
Calcium, effect on respiration and phosphorylation in heart-muscle sarcosomes (Salter, E. C. & Cleland, K. W.) 566
Capsicum, decarboxylase for ß-methylendeglutamic acid (Powder, L. D. & Done, J.) 548
Carbohydrate metabolism, oxidative pathway in Escherichia coli (McNair Scott, D. B. & Cohen, S. S.) 23, 33
Carbohydrates, colorimetric determination of (Lunt, E. & Sutcliffe, D.) 122
Carbohydrates of Agave vera cruz Mill. (Srinivasan, M. & Bhatia, I. S.) 286
Carbohydrates, periodate oxidation of, estimation of formaldehyde liberated during (O'ea, J. F. & Gibbons, R. A.) 580
Carbohydrates, spectroscopic studies (Love, R. M.) 126
Carbon dioxide, formation by Gram-negative cocci (Elsden, S. R. & Lewis, D.) 183
Carbonic acid, dehydrogen, kinetics (Dalziel, K.) 79
Carbonic anhydrase in human semen, spermatozoa and seminal plasma (Mawson, C. A. & Fischer, M. I.) 696
Carcinogens, role of soluble proteins in elimination of (Chalmers, N.) xix
Carotene, site of conversion of, in rats (Bieri, T. W.) 23, 33
Carotenoids in larvae of Pliusa gamma (Goodwin, T. W.) 834
Cat urine, isolation of new sulphur-containing amino acid from (Westall, G. R.) 244
Catechol derivatives, oxidation in presence of amine and amino acids (Hackman, R. H. & Todd, A. R.) 651
Catechols, colorimetric determination of (Azouz, W. M., Parke, D. V. & Williams, R. T.) 146
Catechols, formation of, from halogenobenzenes in rabbit (Azouz, W. M., Parke, D. V. & Williams, R. T.) 146
Cations, divalent non-toxic, reversal of antibacterial activity of polymyxin B by (Newton, B. A. x
Cerebral cortex, electrically stimulated, acetylcholine metabolism in (Rowsell, E. V.) v
Cerebral cortex, electrically stimulated, effect of metabolic inhibitors on respiration and glycolysis in (Heald, P. D.) 625
Cerebral tissues, glucose level, metabolism, and response to electrical impulses in (McIlwain, H.) 618
Cerebrin, ß-hydroxy-ß-fatty acids of (Chibnall, A. C., Piper, S. H. & Williams, E. F.) 711
Cerebrospinal fluid proteins, separation by paper electrophoresis (Eaton, J. C. & Gardner, M. D.) xxv
Cerebrum phospholipids of, complete fractionation by (Dawson, R. M. C.) xxi
Chenodeoxycholic acid, preparation of (Wootton, I. D. P. & Wiggins, H. S.) 292
Chenopodium leaves, glycinebetaine content of (Cromwell, B. T. & Rennie, S. D.) 189
Chick-pee seedlings, biosynthesis of choline in (Ahmad, K. & Karim, M. A.) 817
Chitin, of fungal mycelium, action of enzymes on (Smithies, W. R.) 346
Chloramphenicol, inhibition protein synthesis in Staphylococcus aureus by (Gale, E. F. & Folkes, J. P.) 730
Chlorotene, effect on excretion of phenolic acids in rat urine (Boscott, R. J. & Greenberg, S. M.) xviii
p-Chlorophenylalanine, inhibition protein synthesis in Staphylococcus aureus by (Gale, E. F. & Folkes, J. P.) 730
Chloroplastic proteins of barley, amino acids of (Yemm, E. W. & Folkes, B. F.) 700
Cholesterol, free and combined, in plasma (Kerr, L. M. H. & Bauld, W. S.) 872
Cholesterol, possible role of coenzyme A in biosynthesis of (Boyd, G. S.) 892
Choline, biosynthesis in seedling of chick-pea (Ahmad, K. & Karim, M. A.) 817
Choline, synthesis of, effect of cobalamin on quantitative utilization of serine, glycine and formate for (ArneB, H. R. & Neuberger, A.) 259
Choline of placenta (Cole, P. G., Lathe, G. H. & Rüthen, C. R.) 17
Cholinesterase, effect of alkyl fluorocacetates (Bergmann, F. & Shimoni, A.) 50
Cholinesterase, effect of pH on Michaelis constants (Dixon, M.) 102
Cholinesterase, studies on (Myers, D. K.) 67
Cholinesterases, mechanism of inhibition by organo-phosphorus compounds (Aldridge, W. N. & Davison, A. N.) 763
Chromatography of amino acids on starch (Corfield, M. C. & Robson, A.) 517
Chromatography, paper, separation of phosphate esters of muscle by (Caldwell, P. C.) 458
Chromatography, paper, separation of uroporphyrin esters I and II by (Falk, J. E. & Benson, A.) 101
Cicer aridinum, biosynthesis of choline in (Ahmad, K. & Karim, M. A.) 817
Citrate in pigeon brain (Coxon, R. V.) 545
isoCitrate in pigeon brain (Coxon, R. V.) 545
Citrate oxidized by mitochondria (Chappell, J. B. & Perry, S. V.) 586
Citric acid, chromatography of, estimation of (Isherwood, F. A. & Hanes, C. S.) 824
Citric acid, dissimilation by Aerobacter aerogenes (Dagley, S. & Dawes, E. A.) xvi
Citric acid, enzymic estimation of (Dagley, S. & Dawes, E. A.) xxx
Citric acid in mammary gland homogenates, synthesis and oxidation of (Terner, C.) xxix
isoCitric dehydrogenase in Pseudomonas fluorescens (Kogut, M. & Podoski, E. P.) 800
Citruillic, anaerobic breakdown and phosphorylation (Knivet, V. A.) x
Citruillic and a pyrimidine, required for growth of a strain of Bacterium coli (Back, K. C. & Woods, D. D.) xii
Cobalamin, effect on quantitative utilization of serum, glycine and formate for synthesis of choline and methyl groups of methionine (ArneB, H. R. & Neuberger, A.) 259
Cobalamin, influence on growth on diets deficent in labile methyl groups in rats (ArneB, H. R. V. & Neuberger, A.) 259
Iron in hepatic cells, effect of fasting (Harrison, M. F.) 204
Isethionic acid, fate of, in rat (Maw, G. A.) 37
Isoniazid see isoNicotinic acid hydrazide

Kale, minced, fermentation mixtures of, breakdown of amino acids in (Robertson, H. A. & Barnett, A. J. G.) xx
Ketone acids, production from acetic acid by a vibrio (Dagley, S. & Patel, M. D.) xxxvi
Keto acids, separation in blood and urine by paper chromatography (Smith, M. J. H. and Taylor, K. W.) xxx
Ketoglutarate, oxidation of, coupled with oxidative phosphorylation, by heart-muscle sarcosomes (Slater, E. C. & Holton, F. P.) 392
Ketoglutarate oxidized by mitochondria (Chappell, J. B. & Perry, S. V.) 586
Ketoglutarate, active transport by kidney-cortex slices (Whitman, R. & Davies, R. E.) 880
Ketogluconic acid, heat inactivation of (Slater, E. C. & Cleland, K. W.) 586
Ketoglutaric acid in Pseudomonas fluorescens (Kogut, M. & Podoski, E. P.) 800
Kidney mitochondria, activation of fatty acid oxidation by (Judah, J. D. & Rees, K. R.) 664
Kinetics, apparatus for study of (Dalziel, K.) 79
Kinetics of oxidative phosphorylation reaction and adenine nucleotide specificity (Slater, E. C. & Holton, F. A.) 339
Lactate, metabolism by Gram-negative coccus (Elde, S. R. & Lewis, D.) 183
Lactate, oxidation by stimulated cerebral cortex (Heald, P. J.) 625
Lactic acid, chromatography of, estimation of (Isherwood, F. A. & Hans, C. S.) 824
Lactic acid, determination in microgram quantities (Hullin, R. P. & Noble, R. L.) 289
Lactobacillus arabinosus, nicotinamide deamidase in (Hughes, D. E. & Williamson, D. H.) 851
Lactobacillus casei, hydrolysates of, optical form of glutamic acid in (Wiltshire, G. H.) 46
\( \beta \)-Lactoglobulin isolectric, osmotic pressures of (Smithies, O.) 57
Lactose, synthesis from glucose in mammary gland (Reiss, O. K. & Barry, J. M.) 783
Lamb, absorption of immune globulin by (McCarthy, E. F. & McDougall, E. I.) 177
Lamb, haemoglobin derivatives in (Chibnall, A. & Williams, E. F.) 707
Lamella, pigments of from (Lever, J. A. & Olley, J.) 686
Laminar, vitamin A-replacing effect of (Love, J. S. & Morton, R. A.) 681
Lead dithionate, removal of excess periodate by (O’Dea, J. F. & Gibbons, R. A.) 580
Lecitin in fish lipids (Lovern, J. A. & Olley, J.) 686
Lechitinase C, study of action of, evidence for structure of ovolecithin derived from (Long, C. & Maguire, M. F.) xv
Limpet, of brain (Lovern, J. A. & Olley, J.) 686
Limpet, removal of excess periodate by (O’Dea, J. F. & Gibbons, R. A.) 580
Lipase, oat (Martin, H. F. & Peers, F. G.) 523
Lipid in hepatic cells, effect of fasting (Harrison, M. F.) 204
Lipid material from human placenta, fractionation of, application of countercurrent methods to (Cole, P. G., Lathe, G. H. & Ruthven, C. R. J.) 17
Lipids from urine of bulls and pregnant cows (Broadbent, I. E., Brooks, R. V. & Klyne, W.) vi
Lipids of brain dispersion, incorporation of labelled phosphate into (Dawson, R. M. C.) 507
Lipids of fish (Lovern, J. A. & Olley, J.) 686
Lipid-protein complex, particulate, association of alkaline phosphatase of milk with (Morton, R. K.) 786
Littorina littorea, sulphatases and glucuronidases of (Dodson, K. S., Lewis, J. I. M. & Spencer, B.) 253
Liver cell, effect of starvation on composition of (Harrison, M. F.) 204
Liver glutathione level, changes in dietetic liver necrosis (Lindan, O. & Work, E.) 554
INDEX OF SUBJECTS

909

Microsporum, effect of inhibitors on metabolism of (Barlow, A. J. E., Chatto and F., W. & Thompson, C. C.) xxxi

Milk, alkaline phosphatase of (Morton, R. K.) 786, 795

Milk fats of Balanoptera phylus (finner whale), component acids of (Cama, J. S. & Mears, M. L.) 365

Milk whey, sow's, combination of vitamin B12-like compounds with (Gregory, M. E. & Holdsworth, E. S.) 830

Mitochondria, kidney and liver, activation of fatty acid oxidation by (Judah, J. D. & Rees, K. R.) 664

Mitochondria, skeletal-muscle, respiration and adenine-triphosphatase activities of (Chappel, J. B. & Perry, S. V.) 586

Molecular weight of purified sheep salivary mucoid (Caspary, E. A.) 139

Molluscs, marine, arylsulphatase and ß-glucuronidase of (Dodson, K. S., Lewis, J. I. M. & Spencer, B.) 253

Molybdate, catalytic effect of, on hydrolysis of organic phosphates (Weil-Malherbe, H.) 741

Monofluoroacetate on metabolism of Rhodospirillum rubrum (Elsden, S. R. & Ormerod, J. G.) iii

Mucoid, glucoaccharase: a fructosidase (Bealing, F. J.) 93

Mucoid from salivary gland of sheep, physicochemical examination (Caspary, E. A.) 139

Mucoid, homogeneous, from salivary gland of sheep, preparation and properties (MoCrea, J. F.) 132

Mucosa, intestinal, hexokinase activity in (Hele, M. P.) 857

Muscle domesticus, phosphorus metabolism in (Winteringham, F. P. W., Loveday, P. M. & Hellyer, G. C.) xxxiii

Muscle, activity of cytochrome system in (Lawrie, R. A.) 298

Muscle, fish skeletal, proteins of (Connell, J. J.) 378

Muscle mitochondria, skeletal, respiration and adenine-triphosphatase activities of (Chappel, J. B. & Perry, S. V.) 586

Muscle, phosphate esters of, separation by paper chromatography (Caldwell, P. C.) 458

Muscle, proteins of (Perry, S. V.) 114

Muscle, relation of energy-rich phosphate in, to myoglobin and cytochrome-oxidase activity (Lawrie, R. A.) 305

Muscle sarcomeses, heart, effect of calcium on respiration and phosphorylation in (Slater, E. C. & Cleland, K. W.) 566

Muscle sarcomeses, heart, oxidative phosphorylation coupled with oxidation of ß-ketoglutarate by (Slater, E. C. & Holton, F. A.) 530

Myelium of Penicillium griseofulvum Dierckx, lysing action of enzymes on (Smithies, E. R.) 346

Mycofibril, isolated, proteins of (Perry, S. V.) 114

Myoglobin, activity of cytochrome system in muscle and relation to (Lawrie, R. A.) 298

Myoglobin, relation of energy-rich phosphate in muscle to (Lawrie, R. A.) 305

Myokinase and oxidative phosphorylation in heart-muscle sarcomeses (Slater, E. C. & Holton, F. A.) 530

Neerosis, experimental liver, in rats (Lindan, O. & Work, E.) 554, 562

Nicotinamide deaminase, occurrence in bacteria (Hughes, D. E. & Williamson, D. H.) 851

Nicotinamide, deamination by bacteria (Hughes, D. E. & Williamson, D. H.) 851

isoNicotinic acid hydrazide, metabolites of, detection and identification in human urine (Cuthbertson, W. F. J., Ireland, D. M. & Wolff, W.) 669
INDEX OF SUBJECTS

Nitrile and biosynthesis of choline by Cicer arietinum (Ahmad, K. & Karim, M. A.) 517
Nitrogen in fractions of bacterial cells (Fernell, W. R. & King, H. K.) 528
Nitrogen metabolism in Pium sativum (Hyde, T. G.) xx1
Nitrogen, metabolism by bacteria (Simpson, J. R. & Evans, W. C.) xxiv
Nodules from rhizobial patients (Consen, R., Glynn, L. E. & Stanier, W. M.) 248
Nucleic acid in fractions of bacterial cells (Fernell, W. R. & King, H. K.) 528
Nucleic acids, incorporation of radioactive phosphate into
in brain slices (Deluca, H. A., Rossiter, R. J. & Strickland, K. P.) 193
5'-Nucleotidase in brain (Pratt, O. E.) 140
Nucleotide of myofibril (Perry, S. V.) 114

Oat lipase (Martin, H. F. & Peers, F. G.) 523
Octoanoid acid, oxidation in liver and kidney mitochondria
(Judah, J. D. & Rees, K. R.) 664
Oligosaccharides, formation during enzymic hydrolysis of
Sclerocarpus, E. M. & Stone, B. A.) xxv
Oligosaccharides from Agave vera syrup Mill. (Srinivasan, M. & Bhatia, I. S.) 286
Osmometer, dynamic, accurate measurements for small
volumes (Smithies, O.) 57
Oxolein, evidence for structure of, derived from study
of action of lecithinase C (Long, C. & Maguire, M. F.) 15
Ox liver, sulphatase of (Roy, A. B.) 653
Ox ox see o Bulls and Cows
Oxaloacetic decarboxylase in Pseudomonas fluorescens
(Kogut, M. & Podoski, E. P.) 800
Oxidase, polyphenol, from potato, in vitro activity, effect of
L-ascorbic acid on (Baruah, P. & Swain, T.) 352
Oxidation, fatty acid, activation by kidney and liver mito-
chondria (Judah, J. D. & Rees, K. R.) 664
Oxidative phosphorylation and incorporation of phosphate
into brain lipids (Dawson, R. M. C.) 507
Oxidative phosphorylation coupled with oxidation of
a-ketoglutarate by heart-muscle sarcomas (Slater, E. C.
& Holton, F. A.) 530
Oxidative phosphorylation, kinetics of (Slater, E. C.
& Holton, F. A.) 530
O-xo acids, monobasic, isomserism of 2:4-dinitrophenyl-
hydrazones of (Stewart, H. B.) xxvi
Ox ox see xo Katoxid acids
Ox glutarate see o A-Ketoglutarate
Oxygen consumption, effect of polyamino acids on (Katchal-
ski, E., Bichowsky-Slomnitzki, L. & Volcani, B. E.) 671
Pantothenate, effect on ester cholesterol of rats (Boyd,
G. S.) 892
Paper chromatography, separation of x-keto acids by,
in blood and urine (Smith, M. J. H. & Taylor, K. W.) xxx
Paper chromatography, separation of ursoxyrin esters
I and III by (Falk, J. E. & Benson, A.) 101
Paper, continuous electrophoresis on (Holdsworth, E. S.) xxiv
Patella vulgata, sulphotases and glucuronidases of (Dodgson,
K. S., Lewis, J. M. & Spencer, B.) 253
Patella vulgata, see also Limpet
Pea-seeding tissues and extracts, oxidation of tryptophan
in, association with peroxidase (Wilhite, G. H.) 408
Penicillin, biosynthesis (Arnstein, H. R. V. & Grant, P.) v
Penicillium griseofulvum Dierckx, mycelium of, lysing
action of enzymes on (Smithies, W. R.) 546
Penicillium simulans, action on oligosaccharides (Bealing,
F. J.) 93
a-Pentanoate, formed from lower fatty acids by Gram-
negative coccus (Elised, S. R. & Lewis, D.) 183
Pentose in fractions of bacterial cells (Fernell, W. R. & King, H. K.) 578
Pentosenenucleic acids of brain slices, factors affecting in-
corporation of radioactive phosphate into (Findlay, M.,
Rossiter, R. J. & Strickland, K. P.) 200
Peptides, action of trypsin on (Waley, S.G. & Watson, J.) 328
Peptides, simple, complexes with zinc and cadmium ions in
aqueous solution (Perkins, D. J.) xxviii
Periodate oxidation of carbohydrates, estimation of
formaldehyde liberated during (O'Dea, J. F. & Gibbons,
E. A.) 580
Periodate oxidation of glyogens (Manners, D. J.) xx
Peroxide and oxidation of tryptophan in pea-seeding
tissues and extracts (Wiltshire, G. H.) 408
Peroxide, cytochrome c, and horseradish peroxidase,
cultural nature of second hydrogen peroxide compound
formed by (George, P.) 220
Peroxidase, horseradish, oxidation of phenylacetalddehyde
by (Kenton, R. H.) 350
Peroxide compound, second hydrogen, chemical nature of,
formed by cytochrome c peroxidase and horseradish
peroxidase (George, P.) 220
Phenol, metabolism of (Parke, D. V. & Williams, R. T.) 337
Phenolic acids in rat, effect of dietary deficiencies, amin-
oprotein, ascorbic acid, chloretone and antibiotics on
(Boscut, R. J. & Greenberg, S. M.) xxviii
Phenylacetalddehyde, oxidation of, by plant saps (Kenton,
R. H.) 350
Phenylalanine, inhibition of incorporation in Staphylococcus
auerus by chloramphenicol and p-chlorophenylalanine
(Gale, E. F. & Folkes, J. P.) 730
Phenylglucoronide, formation from [14C]benzene (Parke,
D. V. & Williams, R. T.) 337
Phenylsulphuric acid, formation from [14C]benzene (Parke,
D. V. & Williams, R. T.) 337
Phloroglucinol reaction for galactose, non specific (Fow-
weather, F. S.) 718
Phosphatase activity in brain, histochemistry of (Pratt,
O. E.) 140
Phosphatase activity, proportion demonstrable in brain by
histological techniques (Pratt, O. E.) 140
Phosphatase, alkaline, of milk (Morton, R. K.) 786, 785
Phosphatase, effect of pH on Michaelis constants (Dixon,
M.) 162
Phosphatases of a brain (Gordon, J. J.) 812
Phosphate, energy-rich, relation in muscle to myoglobin
and cytochrome-oxidase activity (Lawrie, R. A.) 305
Phosphatases esters of muscle, separation by paper chromato-
ography (Chadwick, P. C.) 458
Phosphate, radioactive, incorporation into lipids of brain
disparion (Dawson, R. M. C.) 507
Phosphate, radioactive, incorporation into nucleic acids of
brain slices (Deluca, H. A., Rossiter, R. J. & Strickland,
K. P.) 193
Phosphate, radioactive, incorporation into pentosenucleic
acids of brain slices (Findlay, M., Rossiter, R. J. &
Strickland, K. P.) 200
Phosphates, aromatic see Tri-o-creosyl
Phosphates, organic, determination of (Well-Malherbe, H.)
741
Phosphates, organic, hydrolysis, catalytic effect of molyb-
date (Well-Malherbe, H.) 471
Phosphates, sugar, dehydrogenases of (Glock, G. E. &
McLean, P.) 400
Phosphatidylethanolamine in fish lipids (Loveren, J. A. &
Olley, J.) 686
Phosphocreatine, concentration in rat muscle, and effects of
steroids, deoxycorticosterone and adrenal acetomony
(Conway, E. J. & Hingerty, D.) 447
6-Phosphogluconate dehydrogenase, isolation and properties
(McNair Scott, D. B. & Cohen, S. S.) 23
6-Phosphogluconate dehydrogenase of rat liver, properties
and assay (Glock, G. E. & McLean, P.) 400
Rhodopseudomonas spheroides, porphyrin synthesis by (Lascelles, J.) iv

Rhodospirillum rubrum, monofluorocacetate on metabolism of (Elsden, S. R. & Ormerod, J. G.) iii

Riboflavin and biosynthesis of choline by Cicer aridinum (Ahmad, K. & Karim, M. A.) 817

Ribulose, enzyme phosphorylation of (Heald, K. & Long, C.) xv

Rotations, molecular, of triterpenoid alcohols and their derivatives (Klyne, W. & Stokes, W. M.) xxviii

Rumen, β-glucosidase activity, inhibition by glucono-1,5-lactone (Conchie, J.) xxi

Saccharase, effect of pH on Michaelis constants (Dixon, M.) 162

Saccharomyces fragilis, enzyme formation in (Davies, R.) 454

Salivary gland of sheep, mucoid from, physicochemical examination (Casparry, E. A.) 139

Salivary gland of sheep, preparation and properties of homogeneous mucoid from (McCrea, J. F.) 132

Salmine, amino acid composition of (Corfield, M. C. & Robson, A.) 517

Sarcosomes, heart-muscle, effect of calcium on respiration and phosphorylation in (Slater, E. C. & Cleland, K. W.) 566

Sarcosomes, heart-muscle, oxidative phosphorylation coupled with oxidation of α-ketoglutarate by (Slater, E. C. & Holton, F. A.) 530

Sarcosomes, insect, effect of dinitrophenol on (Slater, E. C. & Lewis, S. E.) xxvii

Sarcosomes, insect, oxidative phosphorylation in (Lewis, S. E. & Slater, E. C.) xxvii

Sebum, squalene in (Wheatley, V. B.) 637

Sedimentation coefficient of polyglucose A (Baldwin, R. L.) 644

Sedimentation coefficients of small molecules: methods of measurement based on refractive-index gradient curve (Baldwin, R. L.) 644

Semen, human, zinc and carbonic anhydrase in (Mawson, C. A. & Fischer, M. L.) 696

Serine, N-benzoyl derivative, chromatography of (Arnstein, H. R. V. & Neuberger, A.) 271

Serine, degradation for assay of radioactivity of C atoms (Arnstein, H. R. V. & Neuberger, A.) 271

dr-Serine, metabolism by Gram-negative cococcus (Elsden, S. R. & Lewis, D.) 183

Serine of placenta (Cole, P. G., Lathe, G. H. & Ruthven, C. R. J.) 17

Serine, quantitative utilization of, effect of cobalamin on, for synthesis of choline and methyl groups of methionine (Arnstein, H. R. V. & Neuberger, A.) 259

Serine, synthesis in rat (Arnstein, H. R. V. & Neuberger, A.) 271

Serum, determination of sodium and potassium in (Holiday, E. R. & Preedy, J. R. K.) 214

Serum, diazo reacting pigment. of (Cole, P. G., Lathe, G. H. & Billing, B. H.) xiii

Serum γ-globulin, iodine uptake by (Boursnell, J. C., Coombs, R. A. & Ritz, V.) 745

Serum globulin of lambs given colostrum (McCarthey, E. F. & McDougall, E. I.) 177

Serum proteins of lambs given colostrum (McCarthey, E. F. & McDougall, E. I.) 177

Sexual organs of rat, 7-dehydrosterol in (Ward, R. J. & Moore, T.) 295

Semen, human, and the properties of homoge neous mucoid from (McCrea, J. F.) 132

Silage, field, occurrence of volatile fatty acids in (Barnett, A. J. G. & Duncan, R. E. B.) xix
