Active 'guides' on Metabolic Routes

The radioactive tracer method is now indispensable for the study of metabolic processes. To scientists engaged in such researches we can supply several hundred 'labelled' compounds from stock or at short notice, of which the following are examples (G = generally labelled):

- Cholesterol-4-C\textsubscript{14}  
- Maltose-C\textsubscript{14} (G)  
- DL-Cystine-S\textsubscript{35}  
- L-Arginine-C\textsubscript{14} (G)  
- Fumaric acid-1-C\textsubscript{14}  
- D-Glucose-1-C\textsubscript{14} (or, G)  
- Sodium acetate-1-C\textsubscript{14} (or, 2)  
- Sodium DL-lactate-1-C\textsubscript{14} (or, 2)  
- DL-Methionine-S\textsubscript{35}  
- L-Valine-C\textsubscript{14} (G)  
- Guanine-8-C\textsubscript{14}  
- D-Mannose-C\textsubscript{14} (G)  
- Histamine (2-ring-C\textsubscript{14})  
- Sorbitol-C\textsubscript{14} (G)  
- Taurine-S\textsubscript{35}  
- Glycerol-1-C\textsubscript{14}  
- DL-Serine-3-C\textsubscript{14}  
- D-Mannose-1-C\textsubscript{14}  
- Sodium pyruvate-1-C\textsubscript{14}  
- DL-Valine-1-C\textsubscript{14}  
- Hypoxanthine-8-C\textsubscript{14}  
- Linoleic acid-1-C\textsubscript{14}  
- DL-Tryptophane [indolyl (alanine-3-C\textsubscript{14})]  
- DL-3 (1, 4-Dihydroxyphenyl) alanine-2-C\textsubscript{14}  
- Glycerol tri(stearate-2-C\textsubscript{14})

"SUPER-MEDIUM" CENTRIFUGE

- Much higher performance
- Less centrifuging time
- Greater capacity – fewer heads necessary

(iii)
This is the most convenient apparatus for micro-respiration work; its circular shape makes for ease and speed of operation and for economy of space. The unit is more compact than a rectangular bath of equal capacity, as it accommodates manometers round its entire periphery. The whole apparatus can be rotated around its base, so that any particular manometer can be brought directly in front of the operator, and the apparatus can be installed in any position (in a corner if need be) since only one side need be accessible.

The circular shape bath has proved ideal for maintaining a uniform temperature as there are no “dead spots” to hinder circulation. Temperature is constant to within $\pm 0.01^\circ C$. Shaking speed and amplitude are adjustable, and provision has been made for secure and positive mounting of the manometers—no wobbling!

Why SP 600?

In every way the SP.600 Spectrophotometer makes an ideal complement to the familiar SP.500. There are analytical problems (in the field of metallurgy, for example) which demand an instrument capable of precise absorption measurement at carefully selected wavelengths, but for which ultraviolet equipment is not necessary. The SP.600 is designed to provide exactly these facilities. The dispersion of the glass prism and the high quality optical system give a resolution unobtainable with filters and the electronic detector-amplifier makes the instrument exceptionally sensitive. It is robust, easily operated and moderately priced. Arrangements can be made for a comprehensive test in your own laboratory, without obligation. Please write for details.
