Independent Meeting

Thermophiles 2003

University of Exeter, 15–19 September 2003

Edited by J. Littlechild (Exeter)

Sponsored by New England Biolabs, Promega, Prokaria, TMO Biotech, South West Regional Development Agency, Exeter City Council, BioApproaches, Bruker Analytical X-Ray Systems, Bio-Rad, Infors and the University of Exeter

Finding extraterrestrial sites for thermophiles T. Naylor	165–167
The hyperthermophilic origin of life revisited D.W. Schwartzman and C.H. Lineweaver	168–171
Sulphate metabolism among thermophiles and hyperthermophiles in natural aquatic systems A.N. Roychoudhury	172–174
Phylogenomics of hyperthermophilic Archaea and Bacteria H.-P. Klenk, M. Spitzer, T. Ochsenreiter and G. Fuellen	175–178
Shuffling of <i>Sulfolobus</i> genomes by autonomous and non-autonomous mobile elements K. Brügger, E. Torarinsson, P. Redder, L. Chen and R.A. Garrett	179–183
Genetic elements of Thermococcales D. Prieur, G. Erauso, C. Geslin, S. Lucas, M. Gaillard, A. Bidault, A.-C. Mattenet, K. Rouault, D. Flament, P. Forterre and M. Le Romancer	184–187
Functional genomics-based studies of the microbial ecology of hyperthermophilic micro-organisms M.R. Johnson, C.I. Montero, S.B. Connors, K.R. Shockley, M.A. Pysz and R.M. Kelly	188–192
Alkalithermophiles J. Wiegel and V.V. Kevbrin	193–198
The outer membrane of the hyperthermophilic archaeon <i>Ignicoccus</i> : dynamics, ultrastructure and composition D.J. Näther and R. Rachel	199–203
Exceptionally diverse morphotypes and genomes of crenarchaeal hyperthermophilic viruses D. Prangishvili and R.A. Garrett	204–208
Distribution and molecular investigation of highly thermophilic bacteria associated with cool soil environments T.J. Rahman, R. Marchant and I.M. Banat	209–213

Habitat, applications and genomics of the aerobic, thermophilic genus <i>Geobacillus</i> G. McMullan, J.M. Christie, T.J. Rahman, I.M. Banat, N.G. Ternan and R. Marchant	214–217
16 S rDNA primers and the unbiased assessment of thermophile diversity G.C. Baker and D.A. Cowan	218–221
Archaeal integrases and mechanisms of gene capture Q. She, B. Shen and L. Chen	222–226
Archaeal histones: structures, stability and DNA binding J.N. Reeve, K.A. Bailey, W.-t. Li, F. Marc, K. Sandman and D.J. Soares	227–230
Two distinct pathways for thymidylate (dTMP) synthesis in (hyper)thermophilic Bacteria and Archaea D. Leduc, S. Graziani, L. Meslet-Cladiere, A. Sodolescu, U. Liebl and H. Myllykallio	231–235
DNA replication in thermophiles A.I. Majernik, E.R. Jenkinson and J.P.J. Chong	236–239
The replication protein of the <i>Sulfolobus islandicus</i> plasmid pRN1 G. Lipps	240–244
Subunit interaction and regulation of activity through terminal domains of the family D DNA polymerase from <i>Pyrococcus horikoshii</i> Y. Shen, X.-F. Tang, E. Matsui and I. Matsui	245–249
Rescue of protein splicing activity from a <i>Magnetospirillum magnetotacticum</i> intein-like element M.W. Southworth, J. Yin and F.B. Perler	250–254
Hyperthermophilic dehydrogenase enzymes J.A. Littlechild, J.E. Guy and M.N. Isupov	255–258
Structure, function and evolution of the Archaeal class I fructose-1,6-bisphosphate aldolase E. Lorentzen, B. Siebers, R. Hensel and E. Pohl	259–263
From hyperthermophiles to psychrophiles: the structural basis of temperature stability of the amino acid dehydrogenases P.J. Baker	264–268
Hyperthermophilic and salt-dependent formyltransferase from <i>Methanopyrus kandleri</i> S. Shima, R.K. Thauer and U. Ermler	269–272
Oxygen and carbon dioxide kinetic challenges for thermophilic mineral bioleaching processes S.H. de Kock, P. Barnard and C.A. du Plessis	273–275
Development of an ideal starch saccharification process using amylolytic enzymes from thermophiles T. Satyanarayana, S.M. Noorwez, S. Kumar, J.L.U.M. Rao, M. Ezhilvannan and P. Kaur	276–278
Exploring and exploiting starch-modifying amyломaltases from thermophiles T. Kaper, M.J.E.C. van der Maarel, G.J.W. Euverink and L. Dijkhuizen	279–282

Potential for using thermophilic anaerobic bacteria for bioethanol production from hemicellulose P. Sommer, T. Georgieva and B.K. Ahring	283–289
Application of thermophilic enzymes in commercial biotransformation processes I.N. Taylor, R.C. Brown, M. Bycroft, G. King, J.A. Littlechild, M.C. Lloyd, C. Praquin, H.S. Toogood and S.J.C. Taylor	290–292
Recombinant enzymes from thermophilic micro-organisms expressed in fungal hosts P.L. Bergquist, V.S.J. Te'o, M.D. Gibbs, N.C. Curach and K.M.H. Nevalainen	293–297
Metagenomics, gene discovery and the ideal biocatalyst D.A. Cowan, A. Arslanoglu, S.G. Burton, G.C. Baker, R.A. Cameron, J.J. Smith and Q. Meyer	298–302
Embden–Meyerhof–Parnas and Entner–Doudoroff pathways in <i>Thermoproteus tenax</i> : metabolic parallelism or specific adaptation? H. Ahmed, B. Tjaden, R. Hensel and B. Siebers	303–304
Triosephosphate isomerase of the hyperthermophile <i>Thermoproteus tenax</i> : thermostability is not everything H. Walden, G. Taylor, H. Lilie, T. Knura and R. Hensel	305
Metabolic channelling of carbamoyl phosphate in the hyperthermophilic archaeon <i>Pyrococcus furiosus</i> : dynamic enzyme–enzyme interactions involved in the formation of the channelling complex J. Massant and N. Glansdorff	306–309
Arginine regulation in <i>Thermotoga neapolitana</i> and <i>Thermotoga maritima</i> D. Charlier	310–313

Biochemical Society Focused Meeting

PI-3 Kinase in Signalling and Disease

Novartis Horsham Research Centre, U.K., 11–12 November 2003

Edited by B. Vanhaesebroeck (Ludwig Institute for Cancer Research, London), P. Finan (Novartis), S. Ward (Bath) and M. Welham (Bath)

Sponsored by Atugen, AstraZeneca, Boehringer Ingelheim Pharma, Celltech, Chiron, Echelon, ICOS, Novartis, Plamed and Serono

Towards an understanding of isoform specificity in phosphoinositide 3-kinase signalling in lymphocytes D.A. Fruman	315–319
Role of class IA phosphoinositide 3-kinase in B lymphocyte development and functions S. Koyasu	320–325
Btk-dependent regulation of phosphoinositide synthesis C.L. Carpenter	326–329
Phosphoinositide 3-kinase: the protein kinase that time forgot L.C. Foukas and P.R. Shepherd	330–331

Phosphoinositide 3-kinase in T cell activation and survival K. Okkenhaug, A. Bilancio, J.L. Emery and B. Vanhaesebroeck	332-335
Visualizing signalling by phosphoinositide 3-kinase pathway lipids G.D. Prestwich	336-337
Acute regulation of the tumour suppressor phosphatase, PTEN, by anionic lipids and reactive oxygen species C.P. Downes, S. Walker, G. McConnachie, Y. Lindsay, I.H. Batty and N.R. Leslie	338-342
The tumour suppressor PTEN: involvement of a tumour suppressor candidate protein in PTEN turnover T. Maehama, F. Okahara and Y. Kanaho	343-347
Phosphatases as small-molecule targets: inhibiting the endogenous inhibitors of kinases A.C. Schmid and R. Woscholski	348-349
Physiological functions of protein kinase B/Akt Z.-Z. Yang, O. Tschopp, A. Baudry, B. Dümmler, D. Hynx and B.A. Hemmings	350-354
Identification of novel effectors of invasive cell growth downstream of phosphoinositide 3-kinase J. Kaufmann, G. Pronk, K. Giese and A. Klippel	355-359
Phosphoinositide 3-kinase and Forkhead, a switch for cell division L. Martínez-Gac, B. Álvarez, Z. García, M. Marqués, M. Arrizabalaga and A.C. Carrera	360-361
Functional analysis of the tumour suppressor gene <i>PTEN</i> in murine B cells and keratinocytes A. Suzuki, T. Sasaki, T.W. Mak and T. Nakano	362-365
Chemokine inhibition – why, when, where, which and how? Z. Johnson, C.A. Power, C. Weiss, F. Rintelen, H. Ji, T. Ruckle, M. Camps, T.N.C. Wells, M.K. Schwarz, A.E.I. Proudfoot and C. Rommel	366-377
PI 3-kinase inhibition: a therapeutic target for respiratory disease P.M. Finan and M.J. Thomas	378-382
Phosphoinositide 3-kinase γ : kinase-dependent and -independent activities in cardiovascular function and disease G. Alloatti, G. Montrucchio, G. Lembo and E. Hirsch	383-386
Phosphoinositide 3-kinases and the regulation of platelet function S.P. Jackson, C.L. Yap and K.E. Anderson	387-392
Inhibiting the phosphoinositide 3-kinase pathway for cancer treatment P. Workman	393-396
