Biochemical Society Focused Meetings

Molecular Mechanisms of Neurodegeneration

O'Reilly Hall, University College Dublin, Republic of Ireland, 14–16 March 2005

Edited by C. O'Neill and B. Irvine

'Nature-inspired' drug-protein complexes as inhibitors of A β aggregation M. Bose, J.E. Gestwicki, V. Devasthali, G.R. Crabtree and I.A. Graef	543–547
The production of hydrogen peroxide during early-stage protein aggregation: a common pathological mechanism in different neurodegenerative diseases? B.J. Tabner, S. Turnbull, N.J. Fullwood, M. German and D. Allsop	548–550
Molecular chaperones as therapeutic targets in amyotrophic lateral sclerosis B. Kalmar, D. Kieran and L. Greensmith	551–552
Disease modifying strategies for the treatment of Alzheimer's disease targeted at modulating levels of the β -amyloid peptide M.N. Pangalos, S.J. Jacobsen and P.H. Reinhart	553–558
Presenilin 1: more than just γ -secretase T. Raemaekers, C. Esselens and W. Annaert	559–562
Synaptic plasticity disruption by amyloid β protein: modulation by potential Alzheimer's disease modifying therapies M.J. Rowan, I. Klyubin, Q. Wang and R. Anwyl	563–567
Involvement of presenilins in cell-survival signalling pathways J.V. McCarthy	568–572
Evidence that vitamin D ₃ reverses age-related inflammatory changes in the rat hippocampus M.E. Moore, A. Piazza, Y. McCartney and M.A. Lynch	573–577
Expression of normal sequence pathogenic proteins for neurodegenerative disease contributes to disease risk: 'permissive templating' as a general mechanism underlying neurodegeneration J. Hardy	578–581
Evidence suggesting that <i>Homo neanderthalensis</i> contributed the H2 <i>MAPT</i> haplotype to <i>Homo sapiens</i> J. Hardy, A. Pittman, A. Myers, K. Gwinn-Hardy, H.C. Fung, R. de Silva, M. Hutton and J. Duckworth	582–585
Pathophysiology, pleiotropy and paradigm shifts: genetic lessons from Parkinson's disease O.A. Ross and M.J. Farrer	586–590
Mechanisms of memory loss in A β and tau mouse models K.H. Ashe	591–594
Clinicopathological features of the tauopathies B. Murray, T. Lynch and M. Farrell	595–599

Localization and Activation of Ras-like GTPases

The Royal Agricultural College, Cirencester, U.K., 21–23 March 2005

Edited by A. Ridley (Ludwig Institute of Cancer Research, London, U.K.) and M. Seabra (Imperial College London, U.K.)

The Arf-like GTPase Arl1 and its role in membrane traffic S. Munro	601–605
A role of SAND-family proteins in endocytosis D. Poteryaev and A. Spang	606–608
Integrin regulation of membrane domain trafficking and Rac targeting A. Grande-García, A. Echarri and M.A. Del Pozo	609–613
Insights into biological functions across species: examining the role of Rab proteins in YIP1 family function C.Z. Chen and R.N. Collins	614–618
Membrane curvature and the control of GTP hydrolysis in Arf1 during COPI vesicle formation B. Antonny, J. Bigay, J.-F. Casella, G. Drin, B. Mesmin and P. Gounon	619–622
RhoGDI-3, a promising system to investigate the regulatory function of rhoGDIs: uncoupling of inhibitory and shuttling functions of rhoGDIs E. Dransart, A. Morin, J. Cherfils and B. Olofsson	623–626
A model for Rab GTPase localization S. Pfeffer	627–630
Mechanism and role of localized activation of Rho-family GTPases in growth factor-stimulated fibroblasts and neuronal cells K. Kurokawa, T. Nakamura, K. Aoki and M. Matsuda	631–634
On the action of Brefeldin A on Sec7-stimulated membrane-recruitment and GDP/GTP exchange of Arf proteins J. Cherfils and P. Melançon	635–638
Localization and function of Arf family GTPases J.G. Donaldson and A. Honda	639–642
ARL1 has an essential role in <i>Trypanosoma brucei</i> H.P. Price, D. Goulding and D.F. Smith	643–645
Spatiotemporal regulation of the Pak1 kinase M.C. Parrini, M. Matsuda and J. de Gunzburg	646–648
Function and regulation of RhoE K. Riento, P. Villalonga, R. Garg and A. Ridley	649–651
Targeting of Rab GTPases to cellular membranes B.R. Ali and M.C. Seabra	652–656
Compartmentalized signalling of Ras M.R. Philips	657–661
Use of the Ras binding domain of c-Raf for biochemical and live-cell analysis of Ras activation I. Rubio	662–663

The Molecular Biology of Colorectal Cancer

The UBHT Education Centre, Bristol, U.K., 10–11 March 2005

Edited by T. Corfield (Bristol, U.K.), C. Paraskeva (Bristol, U.K.) and H. Wallace (Aberdeen, U.K.)

Studying the consequences of immediate loss of gene function in the intestine: APC A.R. Clarke	665–666
Prospects in NSAID-derived chemoprevention of colorectal cancer S. Chell, H.A. Patsos, D. Qualtrough, A.M. H-Zadeh, D.J. Hicks, A. Kaidi, I.R. Witherden, A.C. Williams and C. Paraskeva	667–671
The role of the Wnt signalling pathway in colorectal tumorigenesis J. Behrens	672–675
The role of the retinoblastoma protein (Rb) in the nuclear localization of BAG-1: implications for colorectal tumour cell survival N.K. Clemo, N.J. Arhel, J.D. Barnes, J. Baker, M. Moorghen, G.K. Packham, C. Paraskeva and A.C. Williams	676–678
<i>MutYH (MYH)</i> and colorectal cancer J.R. Sampson, S. Jones, S. Dolwani and J.P. Cheadle	679–683
Epigenetic events in the colorectum and in colon cancer W.M. Grady	684–688
Functional consequences of DNA mismatch repair missense mutations in murine models and their impact on cancer predisposition S.J. Scherer, E. Avdievich and W. Edelmann	689–693
Relationship between the role of the adenomatous polyposis coli protein in colon cancer and its contribution to cytoskeletal regulation I. Näthke	694–697
Pro-inflammatory mediator leukotriene D ₄ induces transcriptional activity of potentially oncogenic genes M. Mezhybovska, K. Wikström, J.F. Öhd and A. Sjölander	698–700
Molecular targets of nitric-oxide-donating aspirin in cancer K. Kashfi and B. Rigas	701–704
Design of a MUC1-based cancer vaccine F.-G. Hanisch	705–708
Methylation of the <i>ESR1</i> CpG island in the colorectal mucosa is an ‘all or nothing’ process in healthy human colon, and is accelerated by dietary folate supplementation in the mouse N.J. Belshaw, G.O. Elliott, E.A. Williams, J.C. Mathers, L. Buckley, B. Bahari and I.T. Johnson	709–711
Cannabinoids and cancer: potential for colorectal cancer therapy H.A. Patsos, D.J. Hicks, A. Greenhough, A.C. Williams and C. Paraskeva	712–714
DNA damage hypersensitivity in cells lacking <i>BRCA2</i> : a review of <i>in vitro</i> and <i>in vivo</i> data T. Hay and A.R. Clarke	715–717

Phenotype associated with recessively inherited mutations in DNA mismatch repair (MMR) genes M. de Vos, B. Hayward, D.T. Bonthron and E. Sheridan	718–720
Action of a library of O-glycosylation inhibitors on the growth of human colorectal cancer cells in culture G. Patsos, V. Hebbe-Viton, R. San Martin, C. Paraskeva, T. Gallagher and A. Corfield	721–723
Is COX-2 a ‘collateral’ target in cancer prevention? K. Kashfi and B. Rigas	724–727
DNA mismatch repair status may influence anti-neoplastic effects of butyrate J.M. Coxhead, E.A. Williams and J.C. Mathers	728–729
<i>DMBT1</i> expression and glycosylation during the adenoma–carcinoma sequence in colorectal cancer C. Robbe, C. Paraskeva, J. Mollenhauer, J.C. Michalski, C. Sergi and A. Corfield	730–732
The importance of colonic butyrate transport to the regulation of genes associated with colonic tissue homeostasis K. Daly, M.A. Cuff, F. Fung and S.P. Shirazi-Beechey	733–735

Independent Meetings

Coenzymology: the biochemistry of vitamin biogenesis and cofactor-containing enzymes

King’s College, Cambridge, U.K., 4–7 April 2005

Edited by A.G. Smith (Cambridge, U.K.) and A.W. Munro (Leicester, U.K.)

Regulation of tetrapyrrole biosynthesis in higher plants M. Moulin and A.G. Smith	737–742
Pantothenate biosynthesis in higher plants K.M. Coxon, E. Chakauya, H.H. Ottenhof, H.M. Whitney, T.L. Blundell, C. Abell and A.G. Smith	743–746
Flavocytochrome P450 BM3: an update on structure and mechanism of a biotechnologically important enzyme A.J. Warman, O. Roitel, R. Neeli, H.M. Girvan, H.E. Seward, S.A. Murray, K.J. McLean, M.G. Joyce, H. Toogood, R.A. Holt, D. Leys, N.S. Scrutton and A.W. Munro	747–753
Flavoenzyme catalysed oxidation of amines: roles for flavin and protein-based radicals S.E. Rigby, J. Basran, J.P. Combe, A.W. Mohsen, H. Toogood, A. van Thiel, M.J. Sutcliffe, D. Leys, A.W. Munro and N.S. Scrutton	754–757
Tetrahydrofolate biosynthesis and distribution in higher plants T. Sahr, S. Ravanel and F. Rébeillé	758–762
Mechanistic and inhibition studies of chorismate-utilizing enzymes O. Kerbarh, E.M.M. Bulloch, R.J. Payne, T. Sahr, F. Rébeillé and C. Abell	763–766
Biophysical tools to monitor enzyme–ligand interactions of enzymes involved in vitamin biosynthesis A. Ciulli and C. Abell	767–771

Studies on thiamine diphosphate-dependent enzymes F.J. Leeper, D. Hawksley, S. Mann, C. Perez Melero and M.D.H. Wood	772-775
Crystal structure of DMGO provides a prototype for a new tetrahydrofolate-binding fold N.S. Scrutton and D. Leys	776-779
Structures and reaction mechanisms of riboflavin synthases of eubacterial and archaeal origin M. Fischer, W. Römisch, B. Illarionov, W. Eisenreich and A. Bacher	780-784
Isoprenoid biosynthetic pathways as anti-infective drug targets F. Rohdich, A. Bacher and W. Eisenreich	785-791
Covalent cofactor attachment to proteins: cytochrome <i>c</i> biogenesis J.M. Stevens, T. Uchida, O. Daltrop and S.J. Ferguson	792-795
Biodiversity of cytochrome P450 redox systems K.J. McLean, M. Sabri, K.R. Marshall, R.J. Lawson, D.G. Lewis, D. Clift, P.R. Balding, A.J. Dunford, A.J. Warman, J.P. McVey, A.-M. Quinn, M.J. Sutcliffe, N.S. Scrutton and A.W. Munro	796-801
Inhibition of 7,8-diaminopelargonic acid aminotransferase by amiclidenomycin and analogues S. Mann, A. Marquet and O. Ploux	802-805
Vitamin B ₁₂ : chemistry and biochemistry B. Kräutler	806-810
Anaerobic synthesis of vitamin B ₁₂ : characterization of the early steps in the pathway S. Frank, A.A. Brindley, E. Deery, P. Heathcote, A.D. Lawrence, H.K. Leech, R.W. Pickersgill and M.J. Warren	811-814
Aerobic synthesis of vitamin B ₁₂ : ring contraction and cobalt chelation D. Heldt, A.D. Lawrence, M. Lindenmeyer, E. Deery, P. Heathcote, S.E. Rigby and M.J. Warren	815-819
Biotin synthase mechanism: an overview M. Lotierzo, B. Tse Sum Bui, D. Florentin, F. Escalettes and A. Marquet	820-823

Mechanisms of Bioenergetic Membrane Proteins: Structures and Beyond

Wilhelm-Kempf Haus, Wiesbaden, Germany, 20-24 March 2005

Edited by F. MacMillan, P. Rich and M. Jones

Molecular and thermodynamic bioenergetics R.J.P. Williams	825-828
Is a third proton-conducting pathway operative in bacterial cytochrome <i>c</i> oxidase? J. Salje, B. Ludwig and O.-M.H. Richter	829-831
Terminal oxidases of cyanobacteria S.E. Hart, B.G. Schlarb-Ridley, D.S. Bendall and C.J. Howe	832-835

Ion translocation by the <i>Escherichia coli</i> NADH:ubiquinone oxidoreductase (complex I) T. Friedrich, S. Stolpe, D. Schneider, B. Barquera and P. Hellwig	836–839
Structure–function relationships in mitochondrial complex I of the strictly aerobic yeast <i>Yarrowia lipolytica</i> U. Brandt, A. Abdrakhmanova, V. Zickermann, A. Galkin, S. Dröse, K. Zwicker and S. Kerscher	840–844
Ubiquinone reduction in the photosynthetic reaction centre of <i>Rhodobacter sphaeroides</i> : interplay between electron transfer, proton binding and flips of the quinone ring A.Y. Mulkidjanian, M.A. Kozlova and D.A. Cherepanov	845–850
Rewiring photosynthesis: engineering wrong-way electron transfer in the purple bacterial reaction centre M.C. Wakeham and M.R. Jones	851–857
Role of electron-transfer quenching of chlorophyll fluorescence by carotenoids in non-photochemical quenching of green plants A. Dreuw, G.R. Fleming and M. Head-Gordon	858–862
Channelrhodopsins: directly light-gated cation channels G. Nagel, T. Szellas, S. Kateriya, N. Adeishvili, P. Hegemann and E. Bamberg	863–866
Active membrane transport and receptor proteins from bacteria M. Saidijam, K.E. Bettaney, G. Szakonyi, G. Psakis, K. Shibayama, S. Suzuki, J.I. Clough, V. Blessie, A. Abu-bakr, S. Baumberg, J. Mueller, C.K. Hoyle, S.L. Palmer, P. Butaye, K. Walravens, S.G. Patching, J. O'Reilly, N.G. Rutherford, R.M. Bill, D.I. Roper, M.K. Phillips-Jones and P.J.F. Henderson	867–872
NMR and fluorescence spectroscopy approaches to secondary and primary active multidrug efflux pumps M. Lorch, I. Lehner, A. Siarheyeva, D. Basting, N. Pfeleger, T. Manolikas and C. Glaubitz	873–877
Subunit movement in individual H ⁺ -ATP synthases during ATP synthesis and hydrolysis revealed by fluorescence resonance energy transfer M. Börsch and P. Gräber	878–882
Structural features and nucleotide-binding capability of the C subunit are integral to the regulation of the eukaryotic V ₁ V _o ATPases G. Grüber	883–885
A study of the horseradish peroxidase catalytic site by FTIR spectroscopy W.J. Ingledeew and P.R. Rich	886–889
