## Biochemical Society Focused Meetings

### Translation UK

Western Infirmary, Glasgow, U.K., 21–23 July 2005

**Edited by M. Bushell (Nottingham, U.K.), S. Newbury (Newcastle upon Tyne, U.K.), G. Pavitt (Manchester, U.K.) and A. Willis (Nottingham, U.K.)**

- The life and death of translation elongation factor 2  
**R. Jørgensen, A.R. Merrill and G.R. Andersen** 1–6
- Coping with stress: eIF2 kinases and translational control  
**R.C. Wek, H.-Y. Jiang and T.G. Anthony** 7–11
- TOPs and their regulation  
**T.L. Hamilton, M. Stoneley, K.A. Spriggs and M. Bushell** 12–16
- IRES-dependent regulation of FGF-2 mRNA translation in pathophysiological conditions in the mouse  
**I.G. Gonzalez-Herrera, L. Prado-Lourenco, S. Teshima-Kondo, K. Kondo, F. Cabon, J.-F. Arnal, F. Bayard and A.-C. Prats** 17–21
- The large spectrum of eIF2B-related diseases  
**A. Fogli and O. Boespflug-Tanguy** 22–29
- Control of mRNA stability in eukaryotes  
**S.F. Newbury** 30–34
- Decapping the message: a beginning or an end  
**H. Liu and M. Kiledjian** 35–38
- Aberrant termination triggers nonsense-mediated mRNA decay  
**N. Amrani, S. Dong, F. He, R. Ganesan, S. Ghosh, S. Kervestin, C. Li, D.A. Mangus, P. Spatrick and A. Jacobson** 39–42

### Molecular Determinants of Synaptic Function: Molecules and Models

Chilworth Manor and the University of Southampton, U.K., 22–23 September 2005

**Edited by L. Holden-Dye (Southampton, U.K.), V. O'Connor (Southampton, U.K.) and F.A. Stephenson (School of Pharmacy, London, U.K.)**

*Sponsored by Abcam, Affiniti Research Products Ltd, BBSRC (Biotechnology and Biological Sciences Research Council), Capsant Neurotechnologies, Eli Lilly, Ferring Research Ltd, GlaxoSmithKline, Merck Sharp & Dohme Research Laboratories, Portland Press Ltd, Syngenta and UCB Pharma*

- Molecules of the mind: integrating synaptic biochemistry to understand brain function  
**L.M. Holden-Dye, V.M. O'Connor and F.A. Stephenson** 43–44
- Gephyrin: does splicing affect its function?  
**I. Paarmann, T. Saiyed, B. Schmitt and H. Betz** 45–47

GRIF-1–kinesin-1 interactions: a confocal microscopy study <b>K. Pozo and F.A. Stephenson</b>	48–50
Increased expression of glial fibrillary acidic protein fragments and $\mu$ -calpain activation within the hippocampus of prion-infected mice <b>B.C. Gray, P. Skipp, V.M. O'Connor and V.H. Perry</b>	51–54
Glycine transporters: essential regulators of synaptic transmission <b>H. Betz, J. Gomeza, W. Armsen, P. Scholze and V. Eulenburg</b>	55–58
The synapse proteome and phosphoproteome: a new paradigm for synapse biology <b>S.G.N. Grant</b>	59–63
Building a synapse: genetic analysis of glutamatergic neurotransmission <b>P.J. Brockie and A.V. Maricq</b>	64–67
Clathrin and synaptic vesicle endocytosis: studies at the squid giant synapse <b>G.J. Augustine, J.R. Morgan, C.A. Villalba-Galea, S. Jin, K. Prasad and E.M. Lafer</b>	68–72
WAVE signalling: from biochemistry to biology <b>S.H. Soderling and J.D. Scott</b>	73–76
Polyunsaturated fatty acids and neurotransmission in <i>Caenorhabditis elegans</i> <b>E. Marza and G.M. Lesa</b>	77–80
Temperature-sensitive paralytic mutants: insights into the synaptic vesicle cycle <b>N. Vijaykrishnan and K. Broadie</b>	81–87
Overexpression of tau results in defective synaptic transmission in <i>Drosophila</i> neuromuscular junctions <b>F. Chee, A. Mudher, T.A. Newman, M. Cuttle, S. Lovestone and D. Shepherd</b>	88–90

## Independent Meeting

---

### The 11th Nitrogen Cycle Meeting 2005

Estación Experimental del Zaidín, Granada, Spain, 15–17 September 2005

**Edited by E.J. Bedmar (Granada, Spain), M.J. Delgado (Granada, Spain) and C. Moreno-Vivián (Córdoba, Spain)**

---

The <i>Escherichia coli</i> cytochrome <i>c</i> maturation (Ccm) apparatus can mature cytochromes with an extra cysteine within or adjacent to the CXXCH motif <b>J.W.A. Allen and S.J. Ferguson</b>	91–93
Specificity of FNR-type regulators in <i>Paracoccus denitrificans</i> <b>R. Veldman, W.N.M. Reijnders and R.J.M. van Spanning</b>	94–96
Biochemical and regulatory properties of a respiratory island encoded by a conjugative plasmid in the extreme thermophile <i>Thermus thermophilus</i> <b>F. Cava and J. Berenguer</b>	97–100
Use of functional genes to quantify denitrifiers in the environment <b>L. Philippot</b>	101–103

Microarray analysis of gene regulation by oxygen, nitrate, nitrite, FNR, NarL and NarP during anaerobic growth of <i>Escherichia coli</i> : new insights into microbial physiology <b>T.W. Overton, L. Griffiths, M.D. Patel, J.L. Hobman, C.W. Penn, J.A. Cole and C. Constantinidou</b>	104–107
The <i>Bradyrhizobium japonicum napEDABC</i> genes are controlled by the FixLJ-FixK <sub>2</sub> -NnrR regulatory cascade <b>E.F. Robles, C. Sánchez, N. Bonnard, M.J. Delgado and E.J. Bedmar</b>	108–110
Different responses to nitrate and nitrite by the model organism <i>Escherichia coli</i> and the human pathogen <i>Neisseria gonorrhoeae</i> <b>R.N. Whitehead and J.A. Cole</b>	111–114
Respiratory nitrate and nitrite pathway in the denitrifier haloarchaeon <i>Haloferax mediterranei</i> <b>R.M. Martínez-Espinosa, D.J. Richardson, J.N. Butt and M.J. Bonete</b>	115–117
Developing structure-based models to predict substrate specificity of D-group (Type II) molybdenum enzymes: application to a molybdo-enzyme of unknown function from <i>Archaeoglobus fulgidus</i> <b>E.J. Dridge, D.J. Richardson, R.J. Lewis and C.S. Butler</b>	118–121
Evolution of the soluble nitrate reductase: defining the monomeric periplasmic nitrate reductase subgroup <b>B.J.N. Jepson, A. Marietou, S. Mohan, J.A. Cole, C.S. Butler and D.J. Richardson</b>	122–126
The assimilatory nitrate reduction system of the phototrophic bacterium <i>Rhodobacter capsulatus</i> E1F1 <b>C. Pino, F. Olmo-Mira, P. Cabello, M. Martínez-Luque, F. Castillo, M.D. Roldán and C. Moreno-Vivián</b>	127–129
Investigation into the role of the truncated denitrification chain in <i>Rhizobium sllae</i> strain HCNT1 <b>S. Casella, J.P. Shapleigh, A. Toffanin and M. Basaglia</b>	130–132
Inhibiting <i>Escherichia coli</i> cytochrome <i>c</i> nitrite reductase: voltammetry reveals an enzyme equipped for action despite the chemical challenges it may face <i>in vivo</i> <b>J.D. Gwyer, D.J. Richardson and J.N. Butt</b>	133–135
Low-temperature kinetic measurements of microsecond freeze-hyperquench (MHQ) cytochrome oxidase monitored by UV-visible spectroscopy with a newly designed cuvette <b>F.G.M. Wiertz and S. de Vries</b>	136–138
Organization of the respiratory chain of <i>Neisseria meningitidis</i> <b>M. Deeudom, J. Rock and J. Moir</b>	139–142
Comparison of the structural and kinetic properties of the cytochrome <i>c</i> nitrite reductases from <i>Escherichia coli</i> , <i>Wolinella succinogenes</i> , <i>Sulfurospirillum deleyianum</i> and <i>Desulfovibrio desulfuricans</i> <b>T.A. Clarke, A.M. Hemmings, B. Burlat, J.N. Butt, J.A. Cole and D.J. Richardson</b>	143–145
Multiple haem lyase genes indicate substrate specificity in cytochrome <i>c</i> biogenesis <b>S. Hartshorne, D.J. Richardson and J. Simon</b>	146–149

What is the substrate specificity of the System I cytochrome <i>c</i> biogenesis apparatus? <b>J.W.A. Allen and S.J. Ferguson</b>	<b>150–151</b>
Cyanide metabolism of <i>Pseudomonas pseudoalcaligenes</i> CECT5344: role of siderophores <b>M.-J. Huertas, V.M. Luque-Almagro, M. Martínez-Luque, R. Blasco, C. Moreno-Vivián, F. Castillo and M.-D. Roldán</b>	<b>152–155</b>
A multitude of CRP/FNR-like transcription proteins in <i>Bradyrhizobium japonicum</i> <b>S. Mesa, H. Hennecke and H.-M. Fischer</b>	<b>156–159</b>
Metabolic regulation of nitrogen fixation in <i>Rhodospirillum rubrum</i> <b>H. Wang and A. Norén</b>	<b>160–161</b>
Role of the central region of NifL in conformational switches that regulate nitrogen fixation <b>R. Little, I. Martínez-Argudo and R. Dixon</b>	<b>162–164</b>
Analysis of community composition of biofilms in a submerged filter system for the removal of ammonia and phenol from industrial wastewater <b>C. Cortés-Lorenzo, M.L. Molina-Muñoz, B. Gómez-Villalba, R. Vilchez, A. Ramos, B. Rodelas, E. Hontoria and J. González-López</b>	<b>165–168</b>
Approaches to assess the biodiversity of bacteria in natural habitats <b>C. Rösch, S. Eilmus and H. Bothe</b>	<b>169–173</b>
Global impact and application of the anaerobic ammonium-oxidizing (anammox) bacteria <b>H.J.M. Op den Camp, B. Kartal, D. Guven, L.A.M.P. van Niftrik, S.C.M. Haaijer, W.R.L. van der Star, K.T. van de Pas-Schoonen, A. Cabezas, Z. Ying, M.C. Schmid, M.M.M. Kuypers, J. van de Vossenberg, H.R. Harhangi, C. Picioreanu, M.C.M. van Loosdrecht, J.G. Kuenen, M. Strous and M.S.M. Jetten</b>	<b>174–178</b>
Role of nitrogen oxides in the metabolism of ammonia-oxidizing bacteria <b>M.J. Kampschreur, N.C.G. Tan, C. Picioreanu, M.S.M. Jetten, I. Schmidt and M.C.M. van Loosdrecht</b>	<b>179–181</b>
NO-dependent transcriptional activation of gene expression in <i>Ralstonia eutropha</i> H16 <b>R. Cramm, A. Büsch and K. Strube</b>	<b>182–184</b>
N-oxide sensing and denitrification: the DNR transcription factors <b>S. Rinaldo, G. Giardina, M. Brunori and F. Cutruzzolà</b>	<b>185–187</b>
Proton transfer in bacterial nitric oxide reductase <b>U. Flock, J. Reimann and P. Ädelroth</b>	<b>188–190</b>
Mechanism of transcriptional regulation by the <i>Escherichia coli</i> nitric oxide sensor NorR <b>N.P. Tucker, B. D’Autrèaux, S. Spiro and R. Dixon</b>	<b>191–194</b>
The role of <i>Bradyrhizobium japonicum</i> nitric oxide reductase in nitric oxide detoxification in soya bean root nodules <b>G.E. Meakin, B. Jepson, D.J. Richardson, E.J. Bedmar and M.J. Delgado</b>	<b>195–196</b>
Effect of combined oxidative and nitrosative stress on <i>Neisseria meningitidis</i> <b>K. Dyet and J. Moir</b>	<b>197–199</b>
Nitric oxide-sensing mechanisms in <i>Escherichia coli</i> <b>S. Spiro</b>	<b>200–202</b>
