## AstraZeneca Award Lecture

The impact of phage lambda: from restriction to recombineering

**Noreen E. Murray**

**203–207**

## Biochemical Society Focused Meetings

### **Insulin, Calcium and the Control of Mammalian Metabolism**

Willis Hall, University of Bristol, U.K., 22–23 September 2005

**Edited by A. Halestrap, G. Rutter and J.M. Tavaré (Bristol, U.K.)**

Regulation of small GTP-binding proteins by insulin <b>G.I. Welsh, I. Hers, M. Wherlock and J.M. Tavaré</b>	<b>209–212</b>
Regulation of protein synthesis by insulin <b>C.G. Proud</b>	<b>213–216</b>
Regulation of the pyruvate dehydrogenase complex <b>M.S. Patel and L.G. Korotchkina</b>	<b>217–222</b>
Regulation of acetyl-CoA carboxylase <b>R.W. Brownsey, A.N. Boone, J.E. Elliott, J.E. Kulpa and W.M. Lee</b>	<b>223–227</b>
Remodelling Ca <sup>2+</sup> signalling systems and cardiac hypertrophy <b>M.J. Berridge</b>	<b>228–231</b>
Calcium, mitochondria and reperfusion injury: a pore way to die <b>A.P. Halestrap</b>	<b>232–237</b>
Applying science to drug discovery <b>J.G. McCormack</b>	<b>238–242</b>
K <sub>ATP</sub> channels and insulin secretion: a key role in health and disease <b>F.M. Ashcroft</b>	<b>243–246</b>
Insulin secretion in health and disease: genomics, proteomics and single vesicle dynamics <b>G.A. Rutter, A. Varadi, T. Tsuboi, L. Parton and M. Ravier</b>	<b>247–250</b>

### **Antimicrobial Peptides: Mediators of Innate Immunity in the Development of Anti-Infective, Therapeutic and Vaccination Strategies**

New Royal Infirmary, Edinburgh, U.K., 21 November 2005

**Edited by J.-M. Sallenave and J. Govan (Edinburgh, U.K.)**

Structural and functional studies of defensin-inspired peptides <b>D.J. Clarke and D.J. Campopiano</b>	<b>251–256</b>
---	----------------

$\beta$ -Defensin evolution: selection complexity and clues for residues of functional importance <b>C.A.M. Semple, K. Taylor, H. Eastwood, P.E. Barran and J.R. Dorin</b>	<b>257–262</b>
Paneth cell defensins: key effector molecules of innate immunity <b>C.L. Bevins</b>	<b>263–266</b>
Characterization of AWAP IV, the C-terminal domain of the avian protein AWAK <b>C.L. Townes, P. Milona and J. Hall</b>	<b>267–269</b>
The specificity of Sushi peptides for endotoxin and anionic phospholipids: potential application of POPG as an adjuvant for anti-LPS strategies <b>P. Li, M. Sun, B. Ho and J.L. Ding</b>	<b>270–272</b>
Inhibition of antimicrobial peptides by group A streptococci: SIC and DRS <b>B.A. Fernie-King, D.J. Seilly and P.J. Lachmann</b>	<b>273–275</b>
Defensins and cathelicidins in inflammatory lung disease: beyond antimicrobial activity <b>P.S. Hiemstra</b>	<b>276–278</b>
Human neutrophil elastase inhibitors in innate and adaptive immunity <b>P.M. Fitch, A. Roghanian, S.E.M. Howie and J.-M. Sallenave</b>	<b>279–282</b>
Manipulation of dendritic cells for host defence against intracellular infections <b>S. McCormick, M. Santosuosso, X.Z. Zhang and Z. Xing</b>	<b>283–286</b>

---

## **Biocatalysis: Enzymes, Mechanisms and Bioprocesses**

Manchester Conference Centre, Manchester, U.K., 21–22 November 2005

**Edited by N. Bruce and G. Grogan (York, U.K.)**

---

Preparative deracemization of unnatural amino acids <b>I. Fotheringham, I. Archer, R. Carr, R. Speight and N.J. Turner</b>	<b>287–290</b>
Enantioselective formation and ring-opening of epoxides catalysed by halohydrin dehalogenases <b>D.B. Janssen, M. Majerić-Elenkov, G. Hasnaoui, B. Hauer and J.H. Lutje Spelberg</b>	<b>291–295</b>
Biocatalytic approaches for the quantitative production of single stereoisomers from racemates <b>P. Gadler, S.M. Glueck, W. Kroutil, B.M. Nestl, B. Larissegger-Schnell, B.T. Ueberbacher, S.R. Wallner and K. Faber</b>	<b>296–300</b>
Choice of biocatalyst form for scalable processes <b>J.M. Woodley</b>	<b>301–303</b>
Green oxidations with laccase–mediator systems <b>A. Wells, M. Teria and T. Eve</b>	<b>304–308</b>
Understanding enzyme action at solid surfaces <b>P.J. Halling</b>	<b>309–311</b>

---

## Recombinant DNA Technology for the 21st Century

AstraZeneca, Loughborough, U.K., 21–22 November 2005

Edited by **J. Sayers (Sheffield, U.K.)**

---

The impact of molecular biology on drug discovery <b>G.P. Belfield and S.J. Delaney</b>	<b>313–316</b>
DNA mimicry by proteins <b>D.T.F. Dryden and M.R. Tock</b>	<b>317–319</b>
Tn5 transposition: a molecular tool for studying protein structure–function <b>W.S. Reznikoff</b>	<b>320–323</b>
Progress in artificial chromosome technology <b>Z. Larin Monaco and D. Moralli</b>	<b>324–327</b>
Synthesizing cellular networks from evolved ribosome–mRNA pairs <b>O. Rackham and J.W. Chin</b>	<b>328–329</b>
S-Adenosylmethionine: jack of all trades and master of everything? <b>W.A.M. Loenen</b>	<b>330–333</b>
