Biochemical Society Focused Meetings

Compartmentalization of Cyclic AMP Signalling

King's College, Cambridge, U.K., 29–30 March 2006

Edited by D. Cooper (Cambridge, U.K.)

Compartmentalized cAMP signalling: a personal perspective

J.D. Scott **465–467**

Use of single-cell imaging techniques to assess the regulation of cAMP dynamics

D. Willoughby and D.M.F. Cooper **468–471**

Peptides for disruption of PKA anchoring

C. Hundsrucker, W. Rosenthal and E. Klussmann **472–473**

Phosphodiesterase-4 gates the ability of protein kinase A to phosphorylate G-protein receptor kinase-2 and influence its translocation

M.D. Houslay and G.S. Baillie **474–475**

The molecular machinery for cAMP-dependent immunomodulation in T-cells

K. Taskén and A.J. Stokka **476–479**

Layers of organization of cAMP microdomains in a simple cell

A.C.L. Martin and D.M.F. Cooper **480–483**

Functional localization of cAMP signalling in cardiac myocytes

G. Vandecasteele, F. Rochais, A. Abi-Gerges and R. Fischmeister **484–488**

Compartmentalized cAMP signalling is important in the regulation of Ca^{2+} cycling in the heart

B. Lygren and K. Taskén **489–491**

Soluble adenylate cyclase reveals the significance of compartmentalized cAMP on endothelial cell barrier function

S. Sayner and T. Stevens **492–494**

Restricted diffusion of a freely diffusible second messenger: mechanisms underlying compartmentalized cAMP signalling

M. Zaccolo, G. Di Benedetto, V. Lissandron, L. Mancuso, A. Terrin and I. Zamparo **495–497**

cAMP oscillations restrict protein kinase A redistribution in insulin-secreting cells

O. Dyachok, J. Sägetorp, Y. Isakov and A. Tengholm **498–501**

Identification of the macromolecular complex responsible for PI3K γ -dependent regulation of cAMP levels

A. Perino, A. Ghigo, F. Damilano and E. Hirsch **502–503**

cAMP phosphodiesterase-4A1 (PDE4A1) has provided the paradigm for the intracellular targeting of phosphodiesterases, a process that underpins compartmentalized cAMP signalling

E. Huston, T.M. Houslay, G.S. Baillie and M.D. Houslay

504–509

A complex phosphodiesterase system controls β -adrenoceptor signalling in cardiomyocytes

M. Mongillo and M. Zoccolo

510–511

cGMP signalling in a transporting epithelium

S.-A. Davies and J.P. Day

512–514

Signalling from parathyroid hormone

S.C. Tovey, S.G. Dedos and C.W. Taylor

515–517

Meiosis and the Causes and Consequences of Recombination

University of Warwick, U.K., 29–31 March 2006

Edited by D. Monckton (Glasgow, U.K.)

Why have sex? The population genetics of sex and recombination

S.P. Otto and A.C. Gerstein

519–522

Initiation of meiotic recombination by formation of DNA double-strand breaks: mechanism and regulation

S. Keeney and M.J. Neale

523–525

The distribution and causes of meiotic recombination in the human genome

S. Myers, C.C.A. Spencer, A. Auton, L. Bottolo, C. Freeman, P. Donnelly and G. McVean

526–530

Meiotic recombination hotspots in plants

C. Mézard

531–534

Human polymorphism around recombination hotspots

C.C.A. Spencer

535–536

Crossover promotion and prevention

A. Lorenz and M.C. Whitby

537–541

Control of meiotic recombination in *Arabidopsis*: role of the MutL and MutS homologues

F.C.H. Franklin, J.D. Higgins, E. Sanchez-Moran, S.J. Armstrong, K.E. Osman, N. Jackson and G.H. Jones

542–544

Initiation of homologous chromosome pairing during meiosis

P. Jordan

545–549

Factors directing telomere dynamics in synaptic meiosis

H. Scherthan

550–553

Balancing the checks: surveillance of chromosomal exchange during meiosis

G.V. Börner

554–556

Analysis of a cross between green and red fluorescent trypanosomes

W. Gibson, L. Peacock, V. Ferris, K. Williams and M. Bailey

557–559

Effects of intra-gene fitness interactions on the benefit of sexual recombination R.A. Watson, D.M. Weinreich and J. Wakeley	560–561
Sex-ratio meiotic drive in <i>Drosophila simulans</i> : cellular mechanism, candidate genes and evolution C. Montchamp-Moreau	562–565
Why Mendelian segregation? F. Úbeda	566–568
Genetic conflicts during meiosis and the evolutionary origins of centromere complexity H.S. Malik and J.J. Bayes	569–573
Meiosis in mammals: recombination, non-disjunction and the environment P.A. Hunt	574–577
Relationship of recombination patterns and maternal age among non-disjoined chromosomes 21 S.L. Sherman, N.E. Lamb and E. Feingold	578–580
Intra-allelic mutation at human telomeres B. Britt-Compton and D.M. Baird	581–582
Differential mitotic checkpoint protein requirements in somatic and germ cells K.B. Jegannathan and J.M. van Deursen	583–586

Neurotrophins: Mechanisms in Disease and Therapy

School of Chemistry, Bristol, U.K., 6 April 2006

Edited by D. Dawbarn (Bristol)

NGF receptor TrkAd5: therapeutic agent and drug design target D. Dawbarn, M. Fahey, J. Watson, S. Tyler, D. Shoemark, R. Sessions, R. Zhang, L. Brady, C. Willis and S.J. Allen	587–590
Neuro-immune interaction in allergic asthma: role of neurotrophins C. Nassenstein, J. Kutschker, D. Tumes and A. Braun	591–593
The contribution of neurotrophins to the pathogenesis of allergic asthma S. Rochlitzer, C. Nassenstein and A. Braun	594–599
Brain-derived neurotrophic factor and control of synaptic consolidation in the adult brain J. Soulé, E. Messaoudi and C.R. Bramham	600–604
Structural and functional properties of mouse proNGF F. Paoletti, P.V. Konarev, S. Covaceuszach, E. Schwarz, A. Cattaneo, D. Lamba and D.I. Svergun	605–606
Mechanisms of neurotrophin receptor signalling N. Zampieri and M.V. Chao	607–611
Functional mimetics of neurotrophins and their receptors J. Peleshok and H.U. Saragovi	612–617
