## Morton Lecture

---

Form and flexibility in phosphoinositide 3-kinases

**Roger Williams, Alex Berndt, Simon Miller, Wai-Ching Hon and Xuxiao Zhang**

**615–626**

## Novartis Medal Lecture

---

The regulation of protein phosphorylation

**Louise N. Johnson**

**627–641**

## Early Career Research Award

---

Membrane proteins in nanotechnology

**Paul Curnow**

**643–652**

## Biochemical Society Focused Meeting

---

### **Bionanotechnology II: from Biomolecular Assembly to Applications**

Robinson College, Cambridge, U.K., 7–9 January 2009

**Edited by Tony Cass (Imperial College London, U.K.) and Dek Woolfson (Bristol, U.K.).**

---

Engineering responsive mechanisms to control the assembly of peptide-based nanostructures

**Steven Dublin, Yuri Zimenkov and Vincent P. Conticello**

**653–659**

Controlling stiffness in nanostructured hydrogels produced by enzymatic dephosphorylation

**Kate Thornton, Andrew M. Smith, Catherine L.R. Merry and Rein V. Ulijn**

**660–664**

Exploitation of plant and archaeal viruses in bionanotechnology

**David J. Evans**

**665–670**

Structural integrity of  $\beta$ -sheet assembly

**Karen E. Marshall and Louise C. Serpell**

**671–676**

Silk-inspired polymers and proteins <b>John G. Hardy and Thomas R. Scheibel</b>	<b>677–681</b>
Protein aggregation: more than just fibrils <b>Mark R.H. Krebs, Kristin R. Domike and Athene M. Donald</b>	<b>682–686</b>
From biominerals to biomaterials: the role of biomolecule–mineral interactions <b>Carole C. Perry, Siddharth V. Patwardhan and Olivier Deschaume</b>	<b>687–691</b>
Inhibitors of protein aggregation and toxicity <b>Hozefa Amijee, Jill Madine, David A. Middleton and Andrew J. Doig</b>	<b>692–696</b>
Functionalized nanoparticles for bioanalysis by SERRS <b>Duncan Graham, Karen Faulds, David Thompson, Fiona McKenzie, Robert Stokes, Colette Dalton, Ross Stevenson, Jim Alexander, Paul Garside and Emma McFarlane</b>	<b>697–701</b>
Applications of nanopipettes in bionanotechnology <b>Liming Ying</b>	<b>702–706</b>
<b>Selected oral communications</b>	
Electrodes modified with lipid membranes to study quinone oxidoreductases <b>Sophie A. Weiss and Lars J.C. Jeuken</b>	<b>707–712</b>
Sterically stabilized self-assembling reversibly cross-linked polyelectrolyte complexes with nucleic acids for environmental and medical applications <b>Martin C. Garnett, Paolo Ferruti, Elisabetta Ranucci, Marco A. Suardi, Mieke Heyde and Rob Sleat</b>	<b>713–716</b>
Rational design and protein engineering of growth factors for regenerative medicine and tissue engineering <b>Andrew J. Moss, Shikha Sharma and Nicholas P.J. Brindle</b>	<b>717–721</b>

---

## **Protein Evolution: Sequences, Structures and Systems**

Wellcome Trust Conference Centre, Cambridge, U.K., 26–27 January 2009

**Edited by Roman Laskowski (EMBL-EBI, Hinxton, U.K.), Michael Sternberg (Imperial College London, U.K.) and Janet Thornton (EMBL-EBI, Hinxton, U.K.).**

---

The fine details of evolution <b>Roman A. Laskowski, Janet M. Thornton and Michael J.E. Sternberg</b>	<b>723–726</b>
Structural and functional restraints in the evolution of protein families and superfamilies <b>Sungsam Gong, Catherine L. Worth, G. Richard J. Bickerton, Semin Lee, Duangrudee Tanramluk and Tom L. Blundell</b>	<b>727–733</b>
Separating derived from ancestral features of mouse and human genomes <b>Chris P. Ponting and Leo Goodstadt</b>	<b>734–739</b>
Multi-substrate–activity space and quasi-species in enzyme evolution: Ohno’s dilemma, promiscuity and functional orthogonality <b>Bengt Mannervik, Arna Runarsdottir and Sanela Kurtovic</b>	<b>740–744</b>
The evolution of protein functions and networks: a family-centric approach <b>Benoît H. Dessailly, Adam J. Reid, Corin Yeats, Jonathan G. Lees, Alison Cuff and Christine A. Orengo</b>	<b>745–750</b>

The evolution of protein domain families <b>Marija Buljan and Alex Bateman</b>	751–755
Why there is more to protein evolution than protein function: splicing, nucleosomes and dual-coding sequence <b>Tobias Warnecke, Claudia C. Weber and Laurence D. Hurst</b>	756–761
Model-based evolutionary analysis: the natural history of phage-shock stress response <b>Maxime Huvet, Tina Toni, Hui Tan, Goran Jovanovic, Christoph Engl, Martin Buck and Michael P.H. Stumpf</b>	762–767
Evolution in protein interaction networks: co-evolution, rewiring and the role of duplication <b>David L. Robertson and Simon C. Lovell</b>	768–771
<b>Selected oral communications</b>	
Two distinct groups of fungal catalase/oxidases <b>Marcel Zámocký, Paul G. Furtmüller and Christian Obinger</b>	772–777
Evolution of primate orphan proteins <b>Macarena Toll-Riera, Robert Castelo, Nicolás Bellora and M. Mar Albá</b>	778–782
Evidence for an episodic model of protein sequence evolution <b>Romain A. Studer and Marc Robinson-Rechavi</b>	783–786
Differences in the SNARE evolution of fungi and metazoa <b>Nickias Kienle, Tobias H. Kloepper and Dirk Fasshauer</b>	787–791
Prediction of horizontal gene transfers in eukaryotes: approaches and challenges <b>John W. Whitaker, Glenn A. McConkey and David R. Westhead</b>	792–795
Evolution of spectrin function in cytoskeletal and membrane networks <b>Anthony J. Baines</b>	796–803

---

## Biochemical Basis of Respiratory Disease

AstraZeneca, Loughborough, U.K., 5–6 March 2009

**Edited by Colin Bingle (Sheffield, U.K.) and Alan Wallace (AstraZeneca, U.K.).**

---

Angioplasticity in asthma <b>Kewal Asosingh and Serpil C. Erzurum</b>	805–810
The innate immune rheostat: influence on lung inflammatory disease and secondary bacterial pneumonia <b>Tracy Hussell and Mary M. Cavanagh</b>	811–813
Twins studies as a model for studies on the interaction between smoking and genetic factors in the development of chronic bronchitis <b>Magnus Svartengren, Gunnar Engström, Martin Anderson, Jenny Hallberg, Goutham Edula, Maria Gerhardsson de Verdier, Magnus Dahlbäck, Claes M. Lindberg, Kristina Forsman-Semb, Ulf Nihlén and Thomas E. Fehniger</b>	814–818
Accelerated lung aging: a novel pathogenic mechanism of chronic obstructive pulmonary disease (COPD) <b>William MacNee</b>	819–823

Overcoming steroid unresponsiveness in airways disease  
**Ian M. Adcock, Pai-Chien Chou, Andrew Durham and Paul Ford** 824–829

Using *in vivo* zebrafish models to understand the biochemical basis of  
 neutrophilic respiratory disease   
**Jane S. Martin and Stephen A. Renshaw** 830–837

ENU mutagenesis as a tool for understanding lung development and disease  
**Laura Yates, Fiona McMurray, Youming Zhang, Andy Greenfield, Miriam Moffatt,  
 William Cookson and Charlotte Dean** 838–842

Novel regulatory mechanisms for the *CFTR* gene  
**Christopher J. Ott, Neil P. Blackledge, Shih-Hsing Leir and Ann Harris** 843–848

Role of integrin-mediated TGF $\beta$  activation in the pathogenesis of pulmonary  
 fibrosis  
**Amanda Goodwin and Gisli Jenkins** 849–854

Array of hope: expression profiling identifies disease biomarkers and mechanism  
**Soumyaroop Bhattacharya and Thomas J. Mariani** 855–862

### **Selected oral communications**

Role of CFTR, *Pseudomonas aeruginosa* and Toll-like receptors in cystic fibrosis  
 lung inflammation  
**Paul J. Buchanan, Robert K. Ernst, J. Stuart Elborn and Bettina Schock** 863–867

Induced sputum: a window to lung pathology  
**Ben Nicholas and Ratko Djukanović** 868–872

Cytoplasmic tail of IL-13R $\alpha$ 2 regulates IL-4 signal transduction  
**Allison-Lynn Andrews, Ida Karin Nordgren, Isabelle Kirby, John W. Holloway,  
 Stephen T. Holgate, Donna E. Davies and Ali Tavassoli** 873–876

Regulation of mucin expression in respiratory diseases  
**Jonathan Turner and Carol E. Jones** 877–881

IGFBP-5 induces epithelial and fibroblast responses consistent with the fibrotic  
 response  
**Angara Sureshbabu, Hiroshi Okajima, Daisuke Yamanaka, Surya Shastri, Elizabeth Tonner,  
 Colin Rae, Malgorzata Szymanowska, John H. Shand, Shin-Ichiro Takahashi, James Beattie,  
 Gordon J. Allan and David J. Flint** 882–885

Inhibition of inducible nitric oxide synthase in respiratory diseases  
**Christian Hesslinger, Andreas Strub, Rainer Boer, Wolf-Rüdiger Ulrich, Martin D. Lehner  
 and Clemens Braun** 886–891

---

### **Genome Instability and Cancer**

National University of Ireland, Galway, Ireland, 4 December 2008.

**Edited by Michael Carty (National University of Ireland, Galway, Ireland).**

---

DNA damage by low-energy ions  
**C. Adam Hunniford, Robert W. McCullough, R. Jeremy H. Davies and David J. Timson** 893–896

## Selected oral communications

53BP1: function and mechanisms of focal recruitment <b>Jennifer E. FitzGerald, Muriel Grenon and Noel F. Lowndes</b>	<b>897-904</b>
Development of a novel mass spectrometric technique for studying DNA damage <b>Tony L. Merrigan, C. Adam Hunniford, David J. Timson, Martin Catney and Robert W. McCullough</b>	<b>905-909</b>
Understanding the role of aneuploidy in tumorigenesis <b>John H. Bannon and Margaret M. Mc Gee</b>	<b>910-913</b>
Modelling the comet assay <b>Darragh G. McArt, George McKerr, C. Vyvyan Howard, Kurt Saetzler and Gillian R. Wasson</b>	<b>914-917</b>
<i>miR-21</i> as a key regulator of oncogenic processes <b>S. Duygu Selcuklu, Mark T.A. Donoghue and Charles Spillane</b>	<b>918-925</b>
Regulation of Cdc45 in the cell cycle and after DNA damage <b>Ronan Broderick and Heinz-Peter Nasheuer</b>	<b>926-930</b>
