Rank Prize Funds Lecture

Barrett's metaplasia: molecular mechanisms and nutritional influences

Jonathan M.W. Slack, Benjamin J. Colleypriest, Jonathan M. Quinlan, Wei-Yuan Yu, J. Mark Farrant and David Tosh

313–319

Biochemical Society Focused Meetings

Barrett's Metaplasia

University of Bath, Bath, U.K., 17–18 September 2009

Edited by Mark Farrant (Bath, U.K.), Rebecca Fitzgerald (Cambridge, U.K.) and David Tosh (Bath, U.K.).

Modelling Barrett's oesophagus

Jianping Kong, Douglas B. Stairs and John P. Lynch

321–326

Role of the micro-environment in Barrett's carcinogenesis

Pierre Lao-Sirieix and Rebecca C. Fitzgerald

327–330

New models of neoplastic progression in Barrett's oesophagus

Kirill Pavlov and Carlo C. Maley

331–336

The role of secondary bile acids in neoplastic development in the oesophagus

James Cronin, Lisa Williams, Elizabeth McAdam, Zak Eltahir, Paul Griffiths, John Baxter and Gareth Jenkins

337–342

Biomarkers in Barrett's oesophagus

Qizhi Huang and Laura J. Hardie

343–347

The role of acid and bile reflux in oesophagitis and Barrett's metaplasia

Rhonda F. Souza

348–352

The role of *Cdx* genes in the gut and in axial development

Felix Beck and Emma J. Stringer

353–357

Selected oral communications

Pathophysiology of intestinal metaplasia of the stomach: emphasis on *CDX2* regulation

Rita Barros, Vânia Camilo, Bruno Pereira, Jean-Noel Freund, Leonor David and Raquel Almeida

358–363

The role of *Cdx2* in Barrett's metaplasia

Benjamin J. Colleypriest, J. Mark Farrant, Jonathan M.W. Slack and David Tosh

364–369

Cellular origin of Barrett's metaplasia and oesophageal stem cells
Mariagnese Barbera and Rebecca C. Fitzgerald **370–373**

Genetic diversity during the development of Barrett's oesophagus-associated adenocarcinoma: how, when and why?
Trevor A. Graham and Stuart A.C. McDonald **374–379**

Machines on Genes: Enzymes that Make, Break and Move DNA and RNA

Robinson College, Cambridge, U.K., 12–14 August 2009

Edited by Richard Bowater (University of East Anglia, U.K.), Ben Luisi (University of Cambridge, U.K.) and Marshall Stark (University of Glasgow, U.K.).

Machines on Genes: Enzymes that Make, Break and Move DNA and RNA
W. Marshall Stark, Ben F. Luisi and Richard P. Bowater **381–383**

Orchestrating serine resolvases
Phoebe A. Rice, Kent. W. Mouw, Sherwin P. Montaña, Martin R. Boocock, Sally-J. Rowland and W. Marshall Stark **384–387**

Site-specific recombination by ϕ C31 integrase and other large serine recombinases
Margaret C.M. Smith, William R.A. Brown, Andrew R. McEwan and Paul A. Rowley **388–394**

The *Escherichia coli* DNA translocase FtsK
David J. Sherratt, Lidia K. Arciszewska, Estelle Crozat, James E. Graham and Ian Grainge **395–398**

The interaction of four-way DNA junctions with resolving enzymes
David M.J. Lilley **399–403**

Maintaining a sense of direction during long-range communication on DNA
Mark D. Szczelkun, Peter Friedhoff and Ralf Seidel **404–409**

Selected oral communications

The Type IIB restriction endonucleases
Jacqueline J.T. Marshall and Stephen E. Halford **410–416**

Catalysis of site-specific recombination by Tn3 resolvase
Femi J. Oloruniji and W. Marshall Stark **417–421**

Ancient machinery embedded in the contemporary ribosome
Matthew J. Belousoff, Chen Davidovich, Ella Zimmerman, Yaron Caspi, Itai Wekselman, Lin Rozenszajn, Tal Shapira, Ofir Sade-Falk, Leena Taha, Anat Bashan, Manfred S. Weiss and Ada Yonath **422–427**

Nanomechanical constraints acting on the catalytic site of cellular RNA polymerases
Robert O.J. Weinzierl **428–432**

Substrate recognition and catalysis by flap endonucleases and related enzymes
Christopher G. Tomlinson, John M. Attack, Brian Chapados, John A. Tainer and Jane A. Grasby **433–437**

The role of ATP in the reactions of type II DNA topoisomerases
Andrew D. Bates and Anthony Maxwell **438–442**

Synaptopathies: Dysfunction of Synaptic Function

The Hotel Victoria, Newquay, U.K., 2–4 September 2009

Edited by Nils Brose (Max Planck Institute for Experimental Medicine, Göttingen, Germany), Vincent O'Connor (Southampton, U.K.) and Paul Skehel (Centre For Integrative Physiology, Edinburgh, U.K.).

Synaptopathy: dysfunction of synaptic function? Nils Brose, Vincent O'Connor and Paul Skehel	443–444
Confirmed rare copy number variants implicate novel genes in schizophrenia Gloria W.C. Tam, Louie N. van de Lagemaat, Richard Redon, Karen E. Strathdee, Mike D.R. Croning, Mary P. Malloy, Walter J. Muir, Ben S. Pickard, Ian J. Deary, Douglas H.R. Blackwood, Nigel P. Carter and Seth G.N. Grant	445–451
TorsinA and DYT1 dystonia: a synaptopathy? Thomas T. Warner, Alessandra Granata and Giampietro Schiavo	452–456
Stochastic aspects of transmitter release and bioenergetic dysfunction in isolated nerve terminals David G. Nicholls	457–459
Endosomal sorting of AMPA receptors in hippocampal neurons Jonathan G. Hanley	460–465
Drug targets for amyloidosis Simon E. Kolstoe and Steve P. Wood	466–470
Reactive hypertrophy of synaptic varicosities within the hippocampus of prion-infected mice Zuzana Sisková, Nik K. Sanyal, Adam Orban, Vincent O'Connor and V. Hugh Perry	471–475
Synapse elimination during development and disease: immune molecules take centre stage Dorothy P. Schafer and Beth Stevens	476–481
Dysfunction and recovery of synapses in prion disease: implications for neurodegeneration Julie A. Moreno and Giovanna R. Mallucci	482–487
Presynaptic dysfunction in Huntington's disease José L. Rozas, Leonardo Gómez-Sánchez, Cristina Tomás-Zapico, José J. Lucas and Rafael Fernández-Chacón	488–492
Synaptic dysfunction in Parkinson's disease Vincenza Bagetta, Veronica Ghiglieri, Carmelo Sgobio, Paolo Calabresi and Barbara Picconi	493–497
Reversibility of functional deficits in experimental models of Rett syndrome Stuart Cobb, Jacky Guy and Adrian Bird	498–506
The developmental roles of FMRP Sally M. Till	507–510
'Holistic' synaptogenesis Alexandros Pouloupoulos	511–515

Errant ensembles: dysfunctional neuronal network dynamics in schizophrenia
Matt W. Jones 516–521

Selected oral communications

S-acylation by the DHHC protein family
Jennifer Greaves and Luke H. Chamberlain 522–524

The anti-allodynic $\alpha_2\delta$ ligand pregabalin inhibits the trafficking of the calcium channel $\alpha_2\delta$ -1 subunit to presynaptic terminals *in vivo*
Claudia S. Bauer, Wahida Rahman, Alexandra Tran-Van-Minh, Rafael Lujan, Anthony H. Dickenson and Annette C. Dolphin 525–528

Presynaptic roles of intracellular Ca^{2+} stores in signalling and exocytosis
Sohaib Nizami, Vivian W.Y. Lee, Jennifer Davies, Philip Long, Jasmina N. Jovanovic and Talvinder S. Sihra 529–535

Are synapses targets of nanoparticles?
Sergei V. Fedorovich, Alexandra V. Alekseenko and Tatyana V. Waseem 536–538

Alzheimer's disease and amyloid β -peptide deposition in the brain: a matter of 'aging'?
Maria Luisa Moro, Matthew J. Collins and Enrico Cappellini 539–544

Change in tau phosphorylation associated with neurodegeneration in the ME7 model of prion disease
Ayodeji A. Asuni, V. Hugh Perry and Vincent O'Connor 545–551

Metallothioneins and copper metabolism are candidate therapeutic targets in Huntington's disease
Sarah L. Hands, Robert Mason, M. Umar Sajjad, Flaviano Giorgini and Andreas Wyttenbach 552–558

Caenorhabditis elegans: a useful tool to decipher neurodegenerative pathways
James R. Johnson, Robert C. Jenn, Jeff W. Barclay, Robert D. Burgoyne and Alan Morgan 559–563

Disruption of neuronal function by soluble hyperphosphorylated tau in a *Drosophila* model of tauopathy
Catherine M. Cowan, Francis Chee, David Shepherd and Amritpal Mudher 564–570

Cell-Cell Communication in Plant Reproduction

University of Bath, Bath, U.K., 14–16 September 2009

Edited by James Doughty (Bath, U.K.) and Rod Scott (Bath, U.K.).

Cell-cell interactions during patterning of the *Arabidopsis* anther
Xiaoqi Feng and Hugh G. Dickinson 571–576

Life after meiosis: patterning the angiosperm male gametophyte
Michael Borg and David Twell 577–582

Inter-cell-layer signalling during *Arabidopsis* ovule development mediated by the receptor-like kinase STRUBBELIG
Lynette Fulton, Prasad Vaddepalli, Ram Kishor Yadav, Martine Batoux and Kay Schneitz 583–587

Self-incompatibility in *Papaver*: identification of the pollen S-determinant *PrpS*
Natalie S. Poulter, Michael J. Wheeler, Maurice Bosch and Veronica E. Franklin-Tong 588–592

Functional genomics of pollen tube–pistil interactions in <i>Arabidopsis</i> Ravishankar Palanivelu and Mark A. Johnson	593–597
Male gamete biology in flowering plants Scott D. Russell, Xiaoping Gou, Xiaoping Wei and Tong Yuan	598–603
Reproductive cross-talk: seed development in flowering plants Moritz K. Nowack, Alexander Ungru, Katrine N. Bjerkan, Paul E. Gini and Arp Schnittger	604–612
Selected oral communications	
Floral stem cells: from dynamic balance towards termination Bo Sun and Toshiro Ito	613–616
Through a generation darkly: small RNAs in the gametophyte Robert T. Grant-Downton	617–621
Protein interactions and subcellular localization in <i>S</i> -RNase-based self-incompatibility Thomas L. Sims, Avani Patel and Pratima Shrestha	622–626
Female gametophyte-controlled pollen tube guidance Mihaela-Luiza Márton and Thomas Dresselhaus	627–630
Sporophytic control of pollen tube growth and guidance in grasses Andreas Lausser and Thomas Dresselhaus	631–634
Let's get physical: gamete interaction in flowering plants Stefanie Sprunck	635–640

Independent Meeting

Experimental Plant Biology: Why Not?!

Jagiellonian University, Krakow, Poland, 21–25 September 2009

Edited by Kazimierz Strzałka (Jagiellonian University, Krakow, Poland).

Recent achievements and trends in experimental plant biology Kazimierz Strzałka	641–644
The role of chemical dynamics in plant morphogenesis David M. Holloway	645–650
Regulation of plant light harvesting by thermal dissipation of excess energy Silvia de Bianchi, Matteo Ballottari, Luca Dall'Osto and Roberto Bassi	651–660
Involvement of mitochondria in the control of plant cell NAD(P)H reduction levels Allan G. Rasmusson and Sabá V. Wallström	661–666
Regulation of plant gene expression by alternative splicing Craig G. Simpson, Sujatha Manthri, Katarzyna Dorota Raczynska, Maria Kalyna, Dominika Lewandowska, Branislav Kusenda, Monika Maronova, Zofia Szweykowska-Kulinska, Artur Jarmolowski, Andrea Barta and John W.S. Brown	667–671

Nucleolar RNPs: from genes to functional snoRNAs in plants Julie Rodor, Ingrid Letelier, Loreto Holuigue and Manuel Echeverria	672–676
Recent developments in photorespiration research Hermann Bauwe	677–682
Exploiting induced variation to dissect quantitative traits in barley Arnis Druka, Jerome Franckowiak, Udda Lundqvist, Nicola Bonar, Jill Alexander, Justyna Guzy-Wrobelska, Luke Ramsay, Ilze Druka, Iain Grant, Malcolm Macaulay, Vera Vendramin, Fahimeh Shahinnia, Slobodanka Radovic, Kelly Houston, David Harrap, Linda Cardle, David Marshall, Michele Morgante, Nils Stein and Robbie Waugh	683–688
Mutations in genes controlling the biosynthesis and accumulation of inositol phosphates in seeds Søren K. Rasmussen, Christina Rønn Ingvarsdén and Anna Maria Torp	689–694
Genistein: a natural isoflavone with a potential for treatment of genetic diseases Grzegorz Węgrzyn, Joanna Jakóbkiewicz-Banecka, Magdalena Gabig-Cimińska, Ewa Piotrowska, Magdalena Narajczyk, Anna Kloska, Marcelina Malinowska, Dariusz Dziedzic, Izabela Gołębiewska, Marta Moskot and Alicja Węgrzyn	695–701
Light-driven regulatory mechanisms in the photosynthetic antenna complex LHCII Wiesław I. Gruszecki	702–704
Phosphatidylinositol 4,5-bisphosphate regulates plant K ⁺ channels Noa Wigoda, Xiaohong Ma and Nava Moran	705–709
Phytochrome three-dimensional structures and functions Jon Hughes	710–716
Auxin and strigolactones in shoot branching: intimately connected? Petra Stirnberg, Sally Ward and Ottoline Leyser	717–722
Recycling domains in plant cell morphogenesis: small GTPase effectors, plasma membrane signalling and the exocyst Viktor Žárský and Martin Potocký	723–728
