Biochemical Society Annual Symposium No. 78

Recent Advances in Membrane Biochemistry

Robinson College, Cambridge, U.K., 5–7 January 2011

Edited by **J. Malcolm East (Southampton, U.K.) and Frank Michelangeli (Birmingham, U.K.)**.

Recent Advances in Membrane Biochemistry

J. Malcolm East and Francesco Michelangeli

703–706

Early Career Research Award

Endogenous ion channel complexes: the NMDA receptor

René A.W. Frank

707–718

Understanding the yeast host cell response to recombinant membrane protein production

Zharain Bawa, Charlotte E. Bland, Nicklas Bonander, Nagamani Bora, Stephanie P. Cartwright, Michelle Clare, Matthew T. Conner, Richard A.J. Darby, Marvin V. Dilworth, William J. Holmes, Mohammed Jamshad, Sarah J. Routledge, Stephane R. Gross and Roslyn M. Bill

719–723

Crystallizing membrane proteins for structure–function studies using lipidic mesophases

Martin Caffrey

725–732

Sensing bilayer tension: bacterial mechanosensitive channels and their gating mechanisms

Ian R. Booth, Tim Rasmussen, Michelle D. Edwards, Susan Black, Akiko Rasmussen, Wendy Bartlett and Samantha Miller

733–740

The pumps that fuel a sperm's journey

Michael Jakob Clausen, Poul Nissen and Hanne Poulsen

741–745

Membrane proteins: from bench to bits

Gunnar von Heijne

747–750

Unravelling the folding and stability of an ABC (ATP-binding cassette) transporter

Natalie DiBartolo and Paula J. Booth

751–760

Lipid–protein interactions

Anthony G. Lee

761–766

Lipid-protein interactions as determinants of membrane protein structure and function William Dowhan and Mikhail Bogdanov	767-774
Mapping lipid and detergent molecules at the surface of membrane proteins Richard J. Cogdell, Alastair T. Gardiner, Aleksander W. Roszak, Sigitas Stončius, Pavel Kočovský and Neil W. Isaacs	775-779
Improving cardiac Ca ²⁺ transport into the sarcoplasmic reticulum in heart failure: lessons from the ubiquitous SERCA2b Ca ²⁺ pump Peter Vangheluwe and Frank Wuytack	781-787
A diversity of SERCA Ca ²⁺ pump inhibitors Francesco Michelangeli and J. Malcolm East	789-797
The mitochondrial-encoded subunits of respiratory complex I (NADH:ubiquinone oxidoreductase): identifying residues important in mechanism and disease Hannah R. Bridges, James A. Birrell and Judy Hirst	799-806
The choreography of multidrug export Rupak Doshi, Daniel A.P. Gutmann, Yvonne S.K. Khoo, Lisa A. Fagg and Hendrik W. van Veen	807-811
Selected oral communications	
Surfactant-free purification of membrane proteins with intact native membrane environment Mohammed Jamshad, Yu-Pin Lin, Timothy J. Knowles, Rosemary A. Parslow, Craig Harris, Mark Wheatley, David R. Poyner, Roslyn M. Bill, Owen R.T. Thomas, Michael Overduin and Tim R. Dafforn	813-818
Impairment of the activity of the plasma membrane Ca ²⁺ -ATPase in Alzheimer's disease Ana M. Mata, María Berrocal and M. Rosario Sepúlveda	819-822
The <i>Plasmodium falciparum</i> Ca ²⁺ -ATPase PfATP6: insensitive to artemisinin, but a potential drug target Bertrand Arnou, Cédric Montigny, Jens Preben Morth, Poul Nissen, Christine Jaxel, Jesper V. Møller and Marc le Maire	823-831
Communication invited by the Organizers	
Membrane microenvironment regulation of carnitine palmitoyltransferases I and II Khosrow Kashfi, Randall L. Mynatt, Edwards A. Park and George A. Cook	833-837
