Colworth Medal Lecture

The emergence of protein complexes: quaternary structure, dynamics and allostery

Tina Perica, Joseph A. Marsh, Filipa L. Sousa, Eviatar Natan, Lucy J. Colwell, Sebastian E. Ahnert and Sarah A. Teichmann

475–491

Biochemical Society Annual Symposium No. 79

Frontiers in Biological Catalysis

Robinson College, Cambridge, U.K., 10–12 January 2012

Edited by David Leys (Manchester, U.K.), Andrew Munro (Manchester, U.K.), Emma Raven (Leicester, U.K.) and Martin Warren (University of Kent, U.K.).

Exploring the biochemistry at the extracellular redox frontier of bacterial mineral Fe(III) respiration

David J. Richardson, Marcus J. Edwards, Gaye F. White, Nanakow Baiden, Robert S. Hartshorne, Jim Fredrickson, Liang Shi, John Zachara, Andrew J. Gates, Julea N. Butt and Thomas A. Clarke

493–500

Redox, haem and CO in enzymatic catalysis and regulation

Stephen W. Ragsdale, Li Yi, Güneş Bender, Nirupama Gupta, Yan Kung, Lifan Yan, Troy A. Stich, Tzanko Doukov, Lars Leichert, Paul M. Jenkins, Christopher M. Bianchetti, Simon J. George, Stephen P. Cramer, R. David Britt, Ursula Jakob, Jeffrey R. Martens, George N. Phillips, Jr and Catherine L. Drennan

501–507

Tryptophan oxygenation: mechanistic considerations

James H. Naismith

509–514

Protein dynamics and enzyme catalysis: the ghost in the machine?

David R. Glowacki, Jeremy N. Harvey and Adrian J. Mulholland

515–521

The prototypic class Ia ribonucleotide reductase from *Escherichia coli*: still surprising after all these years

Edward J. Brignole, Nozomi Ando, Christina M. Zimanyi and Catherine L. Drennan

523–530

Photoactivated structural dynamics of fluorescent proteins

Dominique Bourgeois, Aline Regis-Faro and Virgile Adam

531–538

The role of UBL domains in ubiquitin-specific proteases

Alex C. Faesen, Mark P.A. Luna-Vargas and Titia K. Sixma

539–545

Structural, mechanistic and regulatory studies of serine palmitoyltransferase Jonathan Lowther, James H. Naismith, Teresa M. Dunn and Dominic J. Campopiano	547–554
Thiamin biosynthesis: still yielding fascinating biological chemistry Tadhg P. Begley, Steven E. Ealick and Fred W. McLafferty	555–560
Engineering oxidoreductases: maquette proteins designed from scratch Bruce R. Lichtenstein, Tammer A. Farid, Goutham Kodali, Lee A. Solomon, J.L. Ross Anderson, Molly M. Sheehan, Nathan M. Ennist, Bryan A. Fry, Sarah E. Chobot, Chris Bialas, Joshua A. Mancini, Craig T. Armstrong, Zhenyu Zhao, Tatiana V. Esipova, David Snell, Sergei A. Vinogradov, Bohdana M. Discher, Christopher C. Moser and P. Leslie Dutton	561–566
Selected oral communications	
Allosteric regulation of the biotin-dependent enzyme pyruvate carboxylase by acetyl-CoA Abdussalam Adina-Zada, Tonya N. Zeczycki, Martin St. Maurice, Sarawut Jitrapakdee, W. Wallace Cleland and Paul V. Attwood	567–572
<i>Mycobacterium tuberculosis</i> cytochrome P450 enzymes: a cohort of novel TB drug targets Sean A. Hudson, Kirsty J. McLean, Andrew W. Munro and Chris Abell	573–579
The anaerobic biosynthesis of vitamin B ₁₂ Simon J. Moore and Martin J. Warren	581–586
Cholesterol, an essential molecule: diverse roles involving cytochrome P450 enzymes Kirsty J. McLean, Marcus Hans and Andrew W. Munro	587–593
<hr/> Correction	595
<hr/>
