GlaxoSmithKline Award Lecture

Ribonuclease H2 in health and disease

Martin A.M. Reijns and Andrew P. Jackson

717-725

Biochemical Society Focused Meetings

Signalling and Acquired Resistance to Targeted Cancer Therapeutics

Robinson College, Cambridge, U.K., 5-7 January 2014.

Edited by Jim Caunt (University of Bath, U.K.), Simon Cook (Babraham Institute, Cambridge, U.K.) and David MacEwan (University of Liverpool, U.K.).

MAPK pathway inhibition in melanoma: resistance three ways

Claudia Wellbrock

727-732

Anticipating mechanisms of resistance to PI3K inhibition in breast cancer: a challenge in the era of precision medicine

Cedric Leroy, Romain J. Amante and Mohamed Bentires-Alj

733-741

Decoding RAS isoform and codon-specific signalling

Anna U. Newlaczyl, Fiona E. Hood, Judy M. Coulson and Ian A. Prior

742-746

Understanding life and death decisions in human leukaemias

David J. MacEwan, Lawrence N. Barrera, Sujitra Keadsanti, Stuart A. Rushworth, Niraj M. Shah, Tianma Yuan and Lyubov Zaitseva

747-751

Resistance acquisition to MDM2 inhibitors

Jindrich Cinatl, Daniel Speidel, Ian Hardcastle and Martin Michaelis

752-757

Adaptive protein and phosphoprotein networks which promote therapeutic sensitivity or acquired resistance

John Haley and Forest M. White

758-764

Assessing adaptation of the cancer kinome in response to targeted therapies

Jon S. Zawistowski, Lee M. Graves and Gary L. Johnson

765-769

Consequences of feedback in signal transduction for targeted therapies

Bertram Klingner and Nils Blüthgen

770-775

Selected oral communications

Intrinsic and acquired resistance to MEK1/2 inhibitors in cancer

Matthew J. Sale and Simon J. Cook

776-783

Molecular mechanisms of asymmetric RAF dimer activation Pablo G. Jambriña, Olga Bohuszewicz, Nicolae-Viorel Buchete, Walter Kolch and Edina Rosta	 784–790
Approaches for measuring signalling plasticity in the context of resistance to targeted cancer therapies Edmund H. Wilkes, Pedro Casado and Pedro R. Cutillas	791–797
PI3K/Akt-mediated regulation of p53 in cancer Aswin G. Abraham and Eric O’Neill	798–803
Overcoming bortezomib resistance in multiple myeloma Megan Y. Murray, Martin J. Auger and Kristian M. Bowles	804–808
The role of the bone morphogenetic proteins in leukaemic stem cell persistence Parto Toofan, David Irvine, Lisa Hopcroft, Mhairi Copland and Helen Wheadon	809–815
One Hippo and many masters: differential regulation of the Hippo pathway in cancer David Romano, David Matallanas, Dennie T. Frederick, Keith T. Flaherty and Walter Kolch	816–821
Exploring mechanisms of acquired resistance to HER2 (human epidermal growth factor receptor 2)-targeted therapies in breast cancer Helen Creedon, Adam Byron, Joanna Main, Larry Hayward, Teresa Klinowska and Valerie G. Brunton	822–830
A role for the pseudokinase HER3 in the acquired resistance against EGFR- and HER2-directed targeted therapy Jeroen Claus, Gargi Patel, Tony Ng and Peter J. Parker	831–836

Behaviour Meets Biochemistry: Animals Making Sense of Molecules Making Scents

Charles Darwin House, London, U.K., 18–20 February 2014.

Edited by Rob Beynon and Jane Hurst (University of Liverpool, U.K.).

The complexity of protein semiochemistry in mammals Robert J. Beynon, Stuart D. Armstrong, Guadalupe Gómez-Baena, Victoria Lee, Deborah Simpson, Jennifer Unsworth and Jane L. Hurst	837–845
Vertebrate pheromones and other semiochemicals: the potential for accommodating complexity in signalling by volatile compounds for vertebrate management John A. Pickett, Stephen Barasa and Michael A. Birkett	846–850
Selection shaped the evolution of mouse androgen-binding protein (ABP) function and promoted the duplication of <i>Abp</i> genes Robert C. Karn and Christina M. Laukaitis	851–860
Do you smell what I smell? Genetic variation in olfactory perception Darren W. Logan	861–865
Comparative study of the molecular variation between ‘central’ and ‘peripheral’ MUPs and significance for behavioural signalling Marie M. Phelan, Lynn McLean, Jane L. Hurst, Robert J. Beynon and Lu-Yun Lian	866–872

Structure and function of a peptide pheromone family that stimulate the vomeronasal sensory system in mice
Takayuki Abe and Kazushige Touhara 873–877

Selected oral communications

Female puberty acceleration by male odour in mice: neural pathway and behavioural consequences
Mélanie Jouhannau, Laura A. Szymanski and Matthieu Keller 878–881

Pheromone-induced cell proliferation in the murine subventricular zone
Sachiko Koyama, Helena A. Soini, John Foley, Milos V. Novotny and Cary Lai 882–885

The major urinary protein system in the rat
Guadalupe Gómez-Baena, Stuart D. Armstrong, Marie M. Phelan, Jane L. Hurst and Robert J. Beynon 886–892

Complementary roles of mouse lipocalins in chemical communication and immunity
Romana Stopková, Barbora Dudková, Petra Hájková and Pavel Stopka 893–898

Redox Regulation in Health and Disease: a Celebration of 50 Years of the Keilin Memorial Lecture

The Royal Society, Edinburgh, U.K., 19–21 March 2014.

Edited by Colin Campbell (University of Edinburgh, U.K.), Ian Megson (University of the Highlands and Islands, U.K.) and Mark Miller (University of Edinburgh, U.K.).

Ratiometric biological nanosensors
Kate M. Fisher and Colin J. Campbell 899–904

Redox regulation in the endoplasmic reticulum
Neil J. Bulleid and Marcel van Lith 905–908

The fission yeast *Schizosaccharomyces pombe* as a model to understand how peroxiredoxins influence cell responses to hydrogen peroxide
Elizabeth A. Veal, Lewis E. Tomalin, Brian A. Morgan and Alison M. Day 909–916

About the dangers, costs and benefits of living an aerobic lifestyle
Daniela Knoefler, Lars I.O. Leichert, Maike Thamsen, Claudia M. Cremers, Dana Reichmann, Michael J. Gray, Wei-Yun Wholey and Ursula Jakob 917–921

Thioredoxin as a putative biomarker and candidate target in age-related immune decline
Helen R. Griffiths, Stuart J. Bennett, Peter Olofsson and Christopher R. Dunston 922–927

Endothelial cell oxidative stress in diabetes: a key driver of cardiovascular complications?
Andrew Shaw, Mary K. Doherty, Nicola J. Mutch, Sandra M. MacRury and Ian L. Megson 928–933

ROS signalling, NADPH oxidases and cancer
William D. Landry and Thomas G. Cotter 934–938

Mitochondria and redox homoeostasis as chemotherapeutic targets Margaret M. Briehl, Margaret E. Tome, Sarah T. Wilkinson, Melba C. Jaramillo and Kristy Lee	939–944
Regulation of the 2-oxoglutarate-dependent dioxygenases and implications for cancer Margreet C.M. Vissers, Caroline Kuiper and Gabi U. Dachs	945–951
Selected oral communications	
Mechanisms and physiological impact of the dual localization of mitochondrial intermembrane space proteins Carmelina Petrongaro and Jan Riemer	952–958
Aberrant redox homoeostasis and mitochondrial dysfunction in Rett syndrome Michael Müller and Karolina Can	959–964
Application of redox proteomics to skeletal muscle aging and exercise Brian McDonagh, Giorgos K. Sakellariou and Malcolm J. Jackson	965–970
Intermolecular disulfide-dependent redox signalling Marrit Putker, Harmjan R. Vos and Tobias B. Dansen	971–978
Reassessing cellular glutathione homoeostasis: novel insights revealed by genetically encoded redox probes Bruce Morgan	979–984
The RNA world and the origin of metabolic enzymes Markus Ralser	985–988
Ultra-endurance exercise: unanswered questions in redox biology and immunology James E. Turner, Stuart J. Bennett, Jos A. Bosch, Helen R. Griffiths and Sarah Aldred	989–995
The red blood cell: a new key player in cardiovascular homoeostasis? Focus on the nitric oxide pathway Benedetta Porro, Sonia Eligini, Isabella Squellerio, Elena Tremoli and Viviana Cavalca	996–1000
Hypercholesterolaemia-induced oxidative stress at the blood–brain barrier Irundika H.K. Dias, Maria C. Polidori and Helen R. Griffiths	1001–1005
The role of oxidative stress in the cardiovascular actions of particulate air pollution Mark R. Miller	1006–1011
Manganese superoxide dismutase in carcinogenesis: friend or foe? Anja Konzack and Thomas Kietzmann	1012–1016
Novel flavonoids as anti-cancer agents: mechanisms of action and promise for their potential application in breast cancer Carlos Martinez-Perez, Carol Ward, Graeme Cook, Peter Mullen, Donald McPhail, David J. Harrison and Simon P. Langdon	1017–1023

Coenzyme A and Its Derivatives in Cellular Metabolism and Disease

Charles Darwin House, London, U.K., 20–21 March 2014.

Edited by Ivan Gout (University College London, U.K.), Suzanne Jackowski (St. Jude Children's Research Hospital, U.S.A.) and Ody Sibon (University of Groningen, The Netherlands).

Coenzyme A and its derivatives: renaissance of a textbook classic Frederica L. Theodoulou, Ody C.M. Sibon, Suzanne Jackowski and Ivan Gout	1025–1032
Physiological roles of the pantothenate kinases Lorraine E. Dansie, Stacy Reeves, Karen Miller, Stephen P. Zano, Matthew Frank, Caroline Pate, Jina Wang and Suzanne Jackowski	1033–1036
Protein acetylation as a means to regulate protein function in tune with metabolic state Lei Shi and Benjamin P. Tu	1037–1042
Role of CoA and acetyl-CoA in regulating cardiac fatty acid and glucose oxidation Osama Abo Alrob and Gary D. Lopaschuk	1043–1051
Chemical biology tools to study pantetheinases of the vanin family Joost Schalkwijk and Patrick Jansen	1052–1055
Signalling functions of coenzyme A and its derivatives in mammalian cells Hongorzul Davaapil, Yugo Tsuchiya and Ivan Gout	1056–1062
Defective pantothenate metabolism and neurodegeneration Susan J. Hayflick	1063–1068
Alteration of the coenzyme A biosynthetic pathway in neurodegeneration with brain iron accumulation syndromes Paola Venco, Sabrina Dusi, Lorella Valletta and Valeria Tiranti	1069–1074
Coenzyme A, more than 'just' a metabolic cofactor Balaji Srinivasan and Ody C.M. Sibon	1075–1079
Recent advances in targeting coenzyme A biosynthesis and utilization for antimicrobial drug development Wessel J.A. Moolman, Marianne de Villiers and Erick Strauss	1080–1086
Exploiting the coenzyme A biosynthesis pathway for the identification of new antimalarial agents: the case for pantothenamides Kevin J. Saliba and Christina Spry	1087–1093
Selected oral communications	
Role of the Vnn1 pantetheinase in tissue tolerance to stress Philippe Naquet, Giuseppina Pitari, Sylvestro Duprè and Franck Galland	1094–1100
Intracellular redistribution of acetyl-CoA, the pivotal point in differential susceptibility of cholinergic neurons and glial cells to neurodegenerative signals Andrzej Szutowicz, Hanna Bielarczyk, Anna Ronowska, Sylwia Gul-Hinc, Joanna Klimaszewska-Łata, Aleksandra Dyś, Marlena Zyśk and Tadeusz Pawełczyk	1101–1106
Methods for measuring CoA and CoA derivatives in biological samples Yugo Tsuchiya, Uyen Pham and Ivan Gout	1107–1111

Coenzyme A biosynthetic machinery in mammalian cells David Lopez Martinez, Yugo Tsuchiya and Ivan Gout	1112–1117
Deregulated coenzyme A, loss of metabolic flexibility and diabetes Suzanne Jackowski and Roberta Leonardi	1118–1122

Independent Meeting

RNA UK 2014

Low Wood Hotel, Windermere, U.K., 24–26 January 2014.

Edited by Niki Gray, Gracjan Michlewski and Steve West (University of Edinburgh, U.K.).

Mechanisms of transcriptional dysregulation in repeat expansion disorders Matthias Groh, Lara Marques Silva and Natalia Gromak	1123–1128
Exosome substrate targeting: the long and short of it Phil Mitchell	1129–1134
Regulation of miRNA strand selection: follow the leader? Hedda A. Meijer, Ewan M. Smith and Martin Bushell	1135–1140
Structural investigations of the RNA-binding properties of STAR proteins Mikael Feracci, Jaelle Foot and Cyril Dominguez	1141–1146
Regulation of ELAV/Hu RNA-binding proteins by phosphorylation Ulrike Bräuer, Emanuela Zaharieva and Matthias Soller	1147–1151
Tra2 protein biology and mechanisms of splicing control Andrew Best, Caroline Dalglish, Mahsa Kheirollahi-Kouhestani, Marina Danilenko, Ingrid Ehrmann, Alison Tyson-Capper and David J. Elliott	1152–1158
Conflict RNA modification, host–parasite co-evolution, and the origins of DNA and DNA-binding proteins Paul J. McLaughlin and Liam P. Keegan	1159–1167
Emerging functions of alternative splicing coupled with nonsense-mediated decay Fursham M. Hamid and Eugene V. Makeyev	1168–1173
Endogenous siRNAs: regulators of internal affairs Monica J. Piatek and Andreas Werner	1174–1179
RBFox2 protein domains and cellular activities Anurada D. Arya, David I. Wilson, Diana Baralle and Michaela Raponi	1180–1183
Human genetic variation and its effect on miRNA biogenesis, activity and function Daniel R. Hogg and Lorna W. Harries	1184–1189
Alternative polyadenylation: less than meets the eye? Jonathan Neve and André Furger	1190–1195
Regulation of gene expression through production of unstable mRNA isoforms Christopher R. Sibley	1196–1205

RNA granules and cytoskeletal links Dipen Rajgor and Catherine M. Shanahan	1206–1210
Single-molecule fluorescence-based studies on the dynamics, assembly and catalytic mechanism of the spliceosome Chandani Warnasooriya and David Rueda	1211–1218
Acute kidney injury: a paradigm for miRNA regulation of the cell cycle Usman Khalid, Timothy Bowen, Donald J. Fraser and Robert H. Jenkins	1219–1223
Recent studies implicate the nucleolus as the major site of nuclear translation Tina McLeod, Akilu Abdullahi, Min Li and Saverio Brogna	1224–1228
Poly(A)-binding proteins are required for diverse biological processes in metazoans Richard W.P. Smith, Tajekesa K.P. Blee and Nicola K. Gray	1229–1237
eIF4E-binding proteins: new factors, new locations, new roles Anastasiia Kamenska, Clare Simpson and Nancy Standart	1238–1245
PolyQ-mediated regulation of mRNA granules assembly Virginia Castilla-Llorente and Andres Ramos	1246–1250
Current perspectives on RNA secondary structure probing Julia Kenyon, Liam Prestwood and Andrew Lever	1251–1255
Yeast mRNA localization: protein asymmetry, organelle localization and response to stress Mariavittoria Pizzinga and Mark P. Ashe	1256–1260
