## Advancing Applications of Super-Resolution Imaging

---

Held at Charles Darwin House, London, U.K., 10 November 2014.

---

Determining the geometry of oligomers of the human epidermal growth factor family on cells with <10 nm resolution

**Sarah R. Needham, Laura C. Zanetti-Domingues, Kathrin M. Scherer, Michael Hirsch, Daniel J. Rolfe, Selene K. Roberts, Marisa L. Martin-Fernandez, David T. Clarke and Christopher J. Tynan**

309–314

Protein clustering and spatial organization in T-cells

**Michael J. Shannon, Garth Burn, Andrew Cope, Georgina Cornish and Dylan M. Owen**

315–321

## Translation-UK 2014

---

Held at the University of Leicester, U.K., 21–22 July 2014.

---

Post-transcriptional regulation of gene expression by Unr

**Swagat Ray, Pól Ó Catnaigh and Emma C. Anderson**

323–327

Regulation and roles of elongation factor 2 kinase

**Christopher G. Proud**

328–332

Control of translation in the cold: implications for therapeutic hypothermia

**John R.P. Knight and Anne E. Willis**

333–337

G-quadruplexes mediate local translation in neurons

**James P.R. Schofield, Joanne L. Cowan and Mark J. Coldwell**

338–342

Selective mRNA translation in erythropoiesis

**Klaske A.M.H. Thiadens and Marieke von Lindern**

343–347

## Calcium Signalling: The Next Generation

---

Held at Charles Darwin House, London, U.K., 9–10 October 2014.

---

Vitamin D: a custodian of cell signalling stability in health and disease

**Michael J. Berridge**

349–358

Examining a new role for zinc in regulating calcium release in cardiac muscle <b>Samantha J. Pitt and Alan J. Stewart</b>	<b>359–363</b>
Using concatenated subunits to investigate the functional consequences of heterotetrameric inositol 1,4,5-trisphosphate receptors <b>Rahul Chandrasekhar, Kamil J. Alzayady and David I. Yule</b>	<b>364–370</b>
Novel signalling mechanism and clinical applications of sperm-specific PLC $\zeta$ <b>Michail Nomikos</b>	<b>371–376</b>
Structural and functional interactions within ryanodine receptor <b>Monika Seidel, F. Anthony Lai and Spyros Zissimopoulos</b>	<b>377–383</b>
TPC: the NAADP discovery channel? <b>Anthony J. Morgan, Lianne C. Davis, Margarida Ruas and Antony Galione</b>	<b>384–389</b>
Alterations in late endocytic trafficking related to the pathobiology of LRRK2-linked Parkinson's disease <b>Pilar Rivero-Ríos, Patricia Gómez-Suaga, Belén Fernández, Jesús Madero-Pérez, Andrew J. Schwab, Allison D. Ebert and Sabine Hilfiker</b>	<b>390–395</b>
Bcl-2 and FKBP12 bind to IP $_3$ and ryanodine receptors at overlapping sites: the complexity of protein–protein interactions for channel regulation <b>Tim Vervliet, Jan B. Parys and Geert Bultynck</b>	<b>396–404</b>
Metabotropic glutamate receptor-mediated cyclic ADP ribose signalling <b>A. Kaar and M.G. Rae</b>	<b>405–409</b>
Pulmonary vein sleeve cell excitation–contraction-coupling becomes desynchronized by spontaneous calcium transients <b>Katja Rietdorf, Said Masoud, Fraser McDonald, Michael J. Sanderson and Martin D. Bootman</b>	<b>410–416</b>
Designer small molecules to target calcium signalling <b>Joanna M. Swarbrick, Andrew M. Riley, Stephen J. Mills and Barry V.L. Potter</b>	<b>417–425</b>
The ryanodine receptor provides high throughput Ca $^{2+}$ -release but is precisely regulated by networks of associated proteins: a focus on proteins relevant to phosphorylation <b>Fiona O'Brien, Elisa Venturi and Rebecca Sitsapesan</b>	<b>426–433</b>
Two-pore channels at the intersection of endolysosomal membrane traffic <b>Jonathan S. Marchant and Sandip Patel</b>	<b>434–441</b>
Regulation of TRPML1 function <b>Helen Waller-Evans and Emyr Lloyd-Evans</b>	<b>442–446</b>

## 8th UK Gap Junction meeting

Held at Glasgow Caledonian University, Glasgow, U.K., 5 December 2014.

Overview of the 8 <sup>th</sup> UK Gap Junction meeting – 5 <sup>th</sup> December 2014 <b>Scott J. Johnstone, Catherine S. Wright and Patricia E. Martin</b>	<b>447–449</b>
--	----------------

Cell communication across gap junctions: a historical perspective and current developments <b>W. Howard Evans</b>	450–459
CO <sub>2</sub> carbamylation of proteins as a mechanism in physiology <b>Louise Meigh</b>	460–464
Post-transcriptional regulation of connexins <b>Clàudia Salat-Canela, María José Muñoz, Marta Sesé, Santiago Ramón y Cajal and Trond Aasen</b>	465–470
Connexin 43 ubiquitination determines the fate of gap junctions: restrict to survive <b>Teresa M. Ribeiro-Rodrigues, Steve Catarino, Maria J. Pinho, Paulo Pereira and Henrique Girao</b>	471–475
To beat or not to beat: degradation of Cx43 imposes the heart rhythm <b>Tânia Martins-Marques, Steve Catarino, Carla Marques, Paulo Pereira and Henrique Girão</b>	476–481
Connexin43 plays diverse roles in co-ordinating cell migration and wound closure events <b>Claire Lorraine, Catherine S. Wright and Patricia E. Martin</b>	482–488
Gap junctions and connexin hemichannels in the regulation of haemostasis and thrombosis <b>Sakthivel Vaiyapuri, Gagan D. Flora and Jonathan M. Gibbins</b>	489–494
Emerging concepts regarding pannexin 1 in the vasculature <b>Miranda E. Good, Daniela Begandt, Leon J. DeLalio, Alexander S. Keller, Marie Billaud and Brant E. Isakson</b>	495–501
Regulation of Pannexin-1 channel activity <b>Kirk A. Taylor, Joy R. Wright and Martyn P. Mahaut-Smith</b>	502–507
Gap junctions – guards of excitability <b>Line Waring Stroemlund, Christa Funch Jensen, Klaus Qvortrup, Mario Delmar and Morten Schak Nielsen</b>	508–512
Electrical consequences of cardiac myocyte: fibroblast coupling <b>Lisa McArthur, Lisa Chilton, Godfrey L. Smith and Stuart A. Nicklin</b>	513–518
Protein kinase C-dependent regulation of connexin43 gap junctions and hemichannels <b>Jette Skov Alstrom, Line Waring Stroemlund, Morten Schak Nielsen and Nanna MacAulay</b>	519–523
Connexin-mediated regulation of the pulmonary vasculature <b>Yvonne Dempsie, Patricia Martin and Paul D. Upton</b>	524–529
