VOLUME 3

# ESSAYS IN MEDICAL BIOCHEMISTRY

Edited by V. MARKS and C. N. HALES

**152 pp. £4.50 (US \$9.00) by surface mail to overseas addresses**

This volume presents in an attractive and readable form four biochemical topics of current medical interest. Hormones feature in articles on folate and B<sub>12</sub> interaction, and the role of the alimentary tract as an endocrine organ. Growing knowledge of proteins secreted by tumours is presented by Dr. I. Chanarin, and Dr. J. B. Holton discusses the value and risks of tests based on amniocentesis. The contributors clearly point out the limits of present knowledge and the scope for further development.

List of Contents and Authors

*Preface*

*Folates, Cobalamins and their Interrelationship in Man*

By I. Chanarin

*Tumour Markers*

By K. D. Bagshawe and F. Searle

*Diagnostic Tests on Amniotic Fluid*

By J. B. Holton

*The Gastrointestinal Hormones with Particular Reference to their Role in Regulation of Insulin Excretion*

By V. Marks and D. S. Turner

As biochemists have become more interested in the pathways of metabolism and mechanisms of control in a wider range of living systems, it has become apparent that, although there are many features in common to organisms inhabiting different environments, a variety of adaptations or refinements has been necessary so as to enable particular species to perform efficiently under the widely differing and often rapidly changing conditions to which they are exposed. Some of the more fully documented examples of these adaptations, including modifications in enzyme structure, function and activity, alteration in membrane lipids and performance and the substitution of one class of carrier molecule by another, are discussed in this volume.
