SUPPLEMENTARY ONLINE DATA

The nuclear factor κB inhibitor (E)-2-fluoro-4′-methoxystilbene inhibits firefly luciferase

Albert BRAEUNING and Silvia VETTER

Department of Toxicology, Institute of Experimental and Clinical Pharmacology and Toxicology, University of Tübingen, Wilhelmstr. 56, 72074 Tübingen, Germany

Figure S1 Inhibition of firefly luciferase by NFκB inhibitor (A) or resveratrol (B) in additional cell lines, for the determination of IC50 values shown in Table 1 in the main paper

For details please refer to the legend to Figure 2 in the main paper.
