ESSAYS IN MEDICAL BIOCHEMISTRY

VOLUME 3

Edited by V. Marks and C. N. Hales.

pp. 152. £4.50 (U.S. \$9.00)

This volume presents in an attractive and readable form four biochemical topics of current medical interest. Hormones feature in articles on folate and B₁₂ interaction, and the role of the alimentary tract as an endocrine organ. Growing knowledge of proteins secreted by tumours is presented by Dr. I. Chanarin, and Dr. J. B. Holton discusses the value and risks of tests based on amniocentesis. The contributors clearly point out the limits of present knowledge and the scope for further development.

WRITING FOR ALL FROM
RESEARCH STUDENTS TO
PROFESSORS

CONCISE . . .

INFORMATIVE . . .

. . . EASY TO READ

This is an extensively revised and updated edition; the earlier editions are all out-of-print, having sold many thousands of copies. The continuing demand shows its worth to any scientist, from student to professor, who writes for publication. Written in concise form this booklet contains much valuable information within its pages. By far the cheapest publication on this subject and a worthy addition to your bookshelf.
