Volume 83

SUBJECT INDEX

First and last page numbers of papers to which entries refer are given. Page numbers marked with an asterisk refer to Editorial Reviews.

- Absorption
colon, human calcitonin 627-631
- N*- β -Acetylgalactosaminidase
pancreatic juice, food intake 277-280
- N*-Acetyl- β -glucosaminidase
pancreatic juice, food intake 277-280
- Acid excretion
potassium load 567-574
- Acromegaly
sodium-potassium ATPase, energy expenditure 325-330
- Acute-phase response
interleukin-6, protein 731-735
- Adenosine
metabolism, obesity 589-592
reperfusion injury, myocardial ischaemia 511-518*
- S*-Adenosyl-L-methionine
membrane fluidity, liver disease 277-280
- Adenylate cyclase
lipolysis, obesity 589-592
- Adhesion molecules
leucocytes, inflammatory bowel disease 221-226
reperfusion injury, myocardial ischaemia 511-518*
- Adrenal cortex hormones
11 β -hydroxysteroid dehydrogenase, hypertension 171-178
- Adrenaline
thermogenesis, cirrhosis 191-198
- β_2 -Adrenoceptor agonist
voluntary muscle strength 615-621
- Adult respiratory distress syndrome
platelet-activating factor 127-138*
- Ageing
bone remodelling, nyctohemeral rhythm 375-382
carbohydrate metabolism 489-494
postural changes, circulatory adjustment 149-155
sodium retention, ageing 301-306
- Airway
ion transport, 5-hydroxytryptamine 331-336
- Airway resistance
exercise, asthma 383-389*
- Alanine metabolism
liver, ³¹P nuclear magnetic resonance spectroscopy 183-190
- Albumin
interleukin-6 731-735
- Albumin excretion
antihypertensive drugs, diabetes 509-510
- Albuminuria
atrial natriuretic peptide, non-insulin-dependent diabetes 247-253
- Aldosterone blockage
renal function, angiotensin II 467-475
- Altitude
cognitive performance 633-636
- Aluminium
intestinal absorption 425-430
kidney, citrate 431-435
- Ambulatory monitoring
blood pressure 1-12*
- Amino acids
spleen, operation 607-614
- Ammonia
spleen, operation 607-614
- Angiotensin II
glomerular receptors, dietary protein 23-28
hypertension 13-22
plasma, tissue kallikrein 477-482
platelet membrane glycoproteins, pregnancy-induced hypertension 89-95
renal function, vasopressin 467-475
vasoactive intestinal peptide 557-560
- Angiotensin II blockade
cardiovascular and neuroendocrine responses 549-556
- Angiotensin II receptors
platelets, hypertension 737
- Angiotensin-converting enzyme inhibition
brain natriuretic peptide, congestive heart failure 143-147
- Anoxia
pulmonary artery, atrial natriuretic peptide 723-729

- Antiglomerular antibodies**
 Henoch–Schoenlein nephritis 281–287
- Antihypertensive drugs**
 albumin excretion, diabetes 509–510
- α_1 -Antitrypsin
 glycosidases, Crohn's disease 409–415
- Aortic compliance**
 familial hypercholesterolaemia 717–721
- Aortic distensibility**
 familial hypercholesterolaemia 717–721
- Apoptosis**
 granulocytes, inflammation 639–648*
 neutrophils, macrophage recognition 649–655
- Aprotinin**
 low-molecular-mass proteins, renal tubular metabolism 289–294
 renal metabolism, lysine 295–299
- Arterial smooth muscle**
 endothelium-dependent relaxation, cyclosporin A 179–182
- Asthma**
 airway resistance, exercise 383–389*
 diet, energy expenditure 109–116
 mediators, circadian rhythm 227–232
 platelet-activating factor 127–138*
- Atrial natriuretic peptide**
 albuminuria, non-insulin-dependent diabetes 247–253
 circulatory homeostasis 519–527*
 congestive heart failure, angiotensin-converting enzyme inhibition 143–147
 fluid intake 35–39
 hypoxaemia 529–533
 kidney function, diabetes 445–451
 plasma, renal failure 437–444
 pulmonary artery, chronic hypoxia 723–729
- Atrial natriuretic peptide clearance receptors**
 kidney, chronic salt loading 139–142
- Atrial natriuretic peptide receptor**
 brain natriuretic peptide 437–444
- Autoimmunity**
 Henoch–Schoenlein nephritis 281–287
- Autoinhibition**
 aprotinin renal metabolism, lysine 295–299
- Autonomic failure**
 superior mesenteric blood flow, clonidine 59–64
- Autonomic neuropathy**
 cardiovascular reflexes, Finapres 157–163
- Baroreflex mechanisms**
 common carotid artery, lower-body negative pressure 535–540
- Blood cells**
 intrasplenic kinetics, exercise 47–54
- Blood flow**
 pelvic pain, temperature 55–58
 spleen, operation 607–614
- Blood pressure**
 angiotensin II blockade, salt-deplete beagle 549–556
 atrial natriuretic peptide/brain natriuretic peptide system 519–527*
 divalent cation excretion 561–565
 home monitoring 1–12*
 insulin resistance 265–275*
 liver, endothelin 165–170
- Blood vessels**
 11β -hydroxysteroid dehydrogenase, cortisol 171–178
- Body composition**
 energy expenditure, growth hormone deficiency 325–330
 thermogenesis, cirrhosis 191–198
- Bone densitometry**
 fracture of the proximal femur, physical activity 665–675
- Bone formation**
 fracture of the proximal femur, physical activity 665–675
- Bone remodelling**
 nyctohemeral rhythm, ageing 375–382
- Bone resorption**
 fracture of the proximal femur, physical activity 665–675
- Bone turnover**
 cytokines, oophorectomy 503–507
- Bradykinin**
 inflammatory pain 337–341
 vagal sensory receptors, enalapril 399–407
- Brain natriuretic peptide**
 circulatory homeostasis 519–527*
 congestive heart failure, angiotensin-converting enzyme inhibition 143–147
 hypoxaemia 529–533
 plasma, renal failure 437–444
- Breast tumour**
 oestrogen receptors, prostaglandins 347–352
- Bronchodilatation**
 exercise, asthma 383–389*
- Burns**
 heat loss, children 117–126
- Calcium**
 parathyroid hormone, tubular acidification 711–715
- Calcium excretion**
 hypertension 561–565
- Canrenoate**
 renal function, angiotensin II 467–475
- Carbohydrate**
 cardiac output 483–487
- Cardiac output**
 exercise, cystic fibrosis 391–397
 liquid diet 483–487
 postural changes, ageing 149–155
- Cardiac transplant**
 atrial and brain natriuretic peptides, plasma 437–444

- Cardiovascular reflexes
 Finapres, autonomic neuropathy 157–163
- Cardiovascular risk
 sialic acid, hypertriglyceridaemia 593–595
- Cardiovascular system
 eicosanoid excretion, diurnal variation 461–465
- Carotid artery stenosis
 flow velocity, transcranial Doppler sonography 357–366
- Catecholamines
 11 β -hydroxysteroid dehydrogenase, hypertension 171–178
- Cathepsin B
 pancreatic juice, food intake 277–280
- Cell size
 obesity, gastric bypass 589–592
- Cerebral blood flow
 altitude 633–636
- Children
 heat loss, burns 117–126
- Cholesterol-to-phospholipid molar ratio
 erythrocytes, liver disease 353–356
- Chronic hypoxia
 pulmonary artery, atrial natriuretic peptide 723–729
- Chronic obstructive pulmonary disease
 brain natriuretic peptide 529–533
 diet, energy expenditure 109–116
- Chronic renal failure
 erythropoietin, renal haemodynamics 453–459
 vasopressin, chronic renal failure 583–587
- Chronic salt loading
 atrial natriuretic peptide clearance receptors, kidney 139–142
- Circadian rhythm
 mediators, asthma 227–232
- Cirrhosis
 insulin secretion 597–605
 lipid peroxidation, zinc 695–700
 malnutrition, energy expenditure 191–198
 pentifylline, haemodynamics 41–45
- Citrate
 aluminium, kidney 431–435
- Clearance study
 electrolyte excretion, potassium load 567–574
- Cognitive performance
 hypoxia 633–636
- Collagen
 methylprednisolone, lupus nephritis 701–709
- Collagenase
 colonic barrier function, spermine 417–423
- Colon
 absorption, human calcitonin 627–631
- Colonic function
 nitrogen, protein requirements 103–108
- Common carotid artery
 baroreflex mechanisms, lower-body negative pressure 535–540
- Complement
 reperfusion injury, myocardial ischaemia 511–518*
- Congestive heart failure
 atrial natriuretic peptide/brain natriuretic peptide system 519–527*
 brain natriuretic peptide, angiotensin-converting enzyme inhibition 143–147
- Corticosteroid receptors
 11 β -hydroxysteroid dehydrogenase, hypertension 171–178
- Cortisol
 11 β -hydroxysteroid dehydrogenase, hypertension 171–178
- Creatine
 muscle, exercise 367–374
- Cremophor-EL
 arterial smooth muscle, endothelium-dependent relaxation 179–182
- C-peptide
 menopause 489–494
 metabolic clearance rate, cirrhosis 597–605
- Crohn's disease
 gallbladder contractility, ultrasound 689–693
 mucin, sulphation 623–626
 α_1 -proteinase inhibitor, glycosidases 409–415
- Cyclosporin A
 arterial smooth muscle, endothelium-dependent relaxation 179–182
- Cystic fibrosis
 exercise, muscle function 391–397
- Cytokines
 mononuclear cells, oophrectomy 503–507
- Deglycosylation
 α_1 -proteinase inhibitor, Crohn's disease 409–415
- Diabetes
 albumin excretion, antihypertensive drugs 509–510
 hypertension 265–275*
 kidney function, intra-individual variation 445–451
 renal haemodynamics, somatostatin 575–581
- Diene-conjugated fatty acids
 diet, free radicals 97–101
- Diet
 diene-conjugated fatty acids, free radicals 97–101
 energy expenditure, chronic obstructive pulmonary disease 109–116
- Dietary antigens
 Henoch–Schoenlein nephritis 281–287
- Dietary protein
 glomerular angiotensin II-receptor binding, hypertension 23–28
- Diurnal rhythm
 blood pressure 1–12*
 eicosanoid excretion, cardiovascular system 461–465

- Dopa
sympathetic nervous system,
6-hydroxydopamine 65–74
- Echo-tracking techniques
common carotid artery, lower-body negative
pressure 535–540
- Eicosanoids
urine, diurnal variation 461–465
- Enalapril
vagal sensory receptors, bradykinin 399–407
- Endothelin
vascular reactivity, portal hypertension 165–170
- Endothelium
reperfusion injury, myocardial
ischaemia 511–518*
- Endothelium-dependent relaxation
arterial smooth muscle, cyclosporin A 179–182
- Energy expenditure
diet, chronic obstructive pulmonary
disease 109–116
growth hormone, sodium–potassium ATPase
325–330
malnutrition, cirrhosis 191–198
weight loss, Parkinson's disease 199–204
- Eosinophil cationic protein
circadian rhythm, asthma 227–232
- Erythrocytes
cholesterol-to-phospholipid molar ratio, liver
disease 353–356
glutathione, oxidation state 637
iron absorption, stable isotopes 213–219
sodium–lithium countertransport,
immunoglobulin A nephropathy 241–245
- Erythropoietin
renal haemodynamics 453–459
- Evans Blue dye
plasma volume, pregnancy-induced
hypertension 29–34
- Exercise
airway resistance, asthma 383–389*
intrasplenic blood cell kinetics, ¹¹¹In 47–54
muscle, creatine 367–374
muscle function, cystic fibrosis 391–397
- Extracellular matrix
methylprednisolone, lupus nephritis 701–709
- Familial hypercholesterolaemia
aortic compliance 717–721
- Fanconi syndrome
succinylacetone 81–87
- Fat
cardiac output 483–487
- Fibrogenesis
lipid peroxidation, cirrhosis 695–700
- Finapres
cardiovascular reflexes, autonomic
neuropathy 157–163
- Flow cytometry
adhesion molecules, leucocytes 221–226
- Flow velocity
carotid artery stenosis, transcranial Doppler
sonography 357–366
- Fluid intake
atrial natriuretic peptide 35–39
- Food intake
pancreatic juice, lysosomal enzymes 277–280
- Forearm blood flow
volume expansion, nitric oxide 541–547
- Fracture of the proximal femur
bone formation, physical activity 665–675
- Fragile X syndrome
genome mapping, prenatal diagnosis 255–264*
- Free radicals
diene-conjugated fatty acids, diet 97–101
- Gallbladder contractility
ultrasound, Crohn's disease 689–693
- Gallstones
gallbladder contractility, Crohn's
disease 689–693
- Ganglioneuroblastoma
neuropeptide Y, plasma 205–211
- Gastric bypass
cell size 589–592
- Gene mapping
fragile X syndrome 255–264*
- Glomerular receptors
angiotensin II, dietary protein 23–28
- Glucocorticoids
extracellular matrix, lupus nephritis 701–709
11 β -hydroxysteroid dehydrogenase,
hypertension 171–178
- Gluconeogenesis
liver, ³¹P nuclear magnetic resonance
spectroscopy 183–190
- Glucose
glycogen synthesis, liver 677–682
24 hour profile, cirrhosis 597–605
menopause 489–494
spleen, operation 607–614
- Glucose intolerance
sodium–lithium countertransport,
hypertension 319–324
- Glucose-6-phosphatase
intestinal mucosa 683–687
- Glutamine
spleen, operation 607–614
- Glutathione
oxidation state, erythrocytes 637
- Glutathione peroxidase
lipid oxidation, ischaemic heart disease 343–345
- Glycaemic control
kidney function, diabetes 445–451
- Glycerol
24 hour profile, cirrhosis 597–605
- Glycogen synthesis
liver 677–682

- Glycosidases
 α_1 -proteinase inhibitor, Crohn's disease 409–415
- Granulocytes
 apoptosis, inflammation 639–648*
- Growth
 bone remodelling, nyctohemeral rhythm 375–382
- Growth hormone
 sodium–potassium ATPase, energy expenditure 325–330
- Growth hormone deficiency
 sodium–potassium ATPase, energy expenditure 325–330
- Guanylate cyclase
 platelets, nitric oxide 313–318
- Haemodialysis
 platelets, nitric oxide 313–318
- Haemodynamics
 pentifylline, portal hypertension 41–45
- Heart rate
 postural changes, ageing 149–155
- Heat loss
 burns, children 117–126
- Heat storage
 burns, children 117–126
- Henoch–Schoenlein nephritis
 antiglomerular antibodies 281–287
- Heparin
 colonic barrier function, spermine 417–423
- High-molecular-mass kininogen
 hypertension 13–22
- Histamine
 circadian rhythm, asthma 227–232
- Home monitoring
 blood pressure 1–12*
- Hormone metabolism
 angiotensin II 557–560
- Hormone regulation
 metabolism, obesity 589–592
- Human calcitonin
 absorption, colon 627–631
- Human serum albumin
 plasma volume, pregnancy-induced hypertension 29–34
- 3-Hydroxybutyrate
 24 hour profile, cirrhosis 597–605
- 6-Hydroxydopamine
 sympathetic nervous system, dopa 65–74
- 11 β -Hydroxysteroid dehydrogenase
 cortisol, hypertension 171–178
- 5-Hydroxytryptamine
 ion transport, airway 331–336
- Hyperalgesia
 bradykinin 337–341
- Hypercalciuria
 prostaglandin excretion 75–80
- Hypertension
 angiotensin II receptors, platelets 737
- cortisol, 11 β -hydroxysteroid dehydrogenase 171–178
- divalent cation excretion 561–565
- glomerular angiotensin II-receptor binding, dietary protein 23–28
- insulin resistance 265–275*
- renin–angiotensin and kallikrein–kinin systems 13–22
- sodium–lithium countertransport, erythrocytes 241–245
- sodium–lithium countertransport, insulin resistance 319–324
- urinary dopamine output, non-insulin-dependent diabetes 247–253
- 'white-coat' effect 1–12*
- Hypertriglyceridaemia
 sialic acid, cardiovascular risk 593–595
- Hypertrophy
 diabetes, somatostatin 575–581
- Hypoxaemia
 brain natriuretic peptide 529–533
- Hypoxia
 cognitive performance 633–636
- Immunoglobulin A nephropathy
 sodium–lithium countertransport, erythrocytes 241–245
- ¹¹¹In
 intrasplenic blood cell kinetics, exercise 47–54
- Indirect calorimetry
 chronic obstructive pulmonary disease 109–116
- Indomethacin
 sodium–potassium ATPase, sodium retention 307–311
- Inductively coupled plasma mass spectrometry
 iron absorption, erythrocytes 213–219
- Inflammation
 myocardial ischaemia 511–518*
- platelet-activating factor 127–138*
- resolution, granulocytes 639–648*
- α -tocopherol, synovial fluid 657–664
- Inflammatory bowel disease
 adhesion molecules, leucocytes 221–226
- Inflammatory pain
 bradykinin 337–341
- Insulin
 energy expenditure, growth hormone deficiency 325–330
- menopause 489–494
- Insulin resistance
 hypertension 265–275*
- sodium–lithium countertransport, hypertension 319–324
- Insulin secretion
 cirrhosis 597–605
- Insulin-like growth factor-I
 receptors, kidney failure 233–239
- Integrins
 apoptotic neutrophils, macrophages 649–655

- Interleukin-1
 mononuclear cells, oophorectomy 503–507
 Interleukin-6
 acute-phase response, protein 731–735
 mononuclear cells, oophorectomy 503–507
 Intestinal absorption
 aluminium species 425–430
 Intestinal disease
 α_1 -proteinase inhibitor, glycosidases 409–415
 Intestinal mucosa
 glucose-6-phosphatase 683–687
 Intestine
 amino acid and ammonia fluxes,
 operation 607–614
 Intracellular calcium
 insulin resistance, hypertension 319–324
 Ion transport
 airway, 5-hydroxytryptamine 331–336
 Iron absorption
 erythrocytes, stable isotopes 213–219
 Ischaemic heart disease
 lipid oxidation, glutathione peroxidase 343–345
- Kallikrein
 angiotensin II, plasma 477–482
 Kallikrein–kinin system
 hypertension 13–22
 Ketone bodies
 platelet-activating factor, sepsis 495–501
 Kidney
 aluminium, citrate 431–435
 atrial natriuretic peptide clearance receptors,
 chronic salt loading 139–142
 Fanconi syndrome, succinylacetone 81–87
 Kidney failure
 insulin-like growth factor-I receptors 233–239
- Lactate
 24 hour profile, cirrhosis 597–605
 spleen, operation 607–614
 Laminin
 methylprednisolone, lupus nephritis 701–709
 Lean body mass
 energy expenditure, growth hormone
 deficiency 325–330
 exercise, cystic fibrosis 391–397
 Leucocytes
 adhesion molecules, inflammatory bowel
 disease 221–226
 Leukotrienes
 reperfusion injury, myocardial
 ischaemia 511–518*
 Lipid peroxidation
 glutathione peroxidase, ischaemic heart
 disease 343–345
 synovial fluid, rheumatoid arthritis 657–664
 zinc, cirrhosis 695–700
 Lipid-associated sialic acid
 hypertriglyceridaemia, cardiovascular
 risk 593–595
 Lipolysis
 adenosine, obesity 589–592
 ketone bodies, platelet-activating factor 495–501
 Lipoproteins
 membrane fluidity, liver diseases 353–356
 Liquid diet
 cardiac output 483–487
 Liver
 amino acid and ammonia fluxes,
 operation 607–614
 blood pressure, endothelin 165–170
 gluconeogenesis, ^{31}P nuclear magnetic resonance
 spectroscopy 183–190
 glycogen synthesis 677–682
 Liver disease
 membrane fluidity, *S*-adenosyl-L-
 methionine 353–356
 Losartan (DuP 753/MK 954)
 cardiovascular and neuroendocrine
 responses 549–556
 Low-density lipoprotein
 synovial fluid, rheumatoid arthritis 657–664
 Lower-body negative pressure
 common carotid artery, baroreflex
 mechanisms 535–540
 Low-molecular-mass proteins
 renal tubular metabolism, aprotinin 289–294
 Lupus nephritis
 extracellular matrix,
 methylprednisolone 701–709
 Lysine
 aprotinin renal metabolism,
 autoinhibition 295–299
 Lysosomal enzymes
 pancreatic juice, food intake 277–280
- Macrophages
 apoptotic neutrophils, thrombospondin 649–655
 Magnesium excretion
 hypertension 561–565
 Malnutrition
 cirrhosis, energy expenditure 191–198
 Martin–Bell syndrome
 genome mapping, prenatal diagnosis 255–264*
 Matrix metalloproteinases
 colonic barrier function, spermine 417–423
 Maximal oxygen intake
 exercise, cystic fibrosis 391–397
 Mediators
 circadian rhythm, asthma 227–232
 Membrane fluidity
 liver disease, *S*-adenosyl-L-methionine 353–356
 Menopause
 carbohydrate metabolism 489–494
 Metabolic clearance rate
 C-peptide, cirrhosis 597–605

- Metabolism**
 obesity, adenosine 589–592
- Methylprednisolone**
 extracellular matrix, lupus nephritis 701–709
- Microcirculation**
 atrial natriuretic peptide, chronic hypoxia 723–729
- Microdissection**
 fragile X syndrome 255–264*
- N-Monomethyl-L-arginine**
 forearm blood flow, volume expansion 541–547
- Mononuclear cells**
 cytokines, oophorectomy 503–507
- Mucin**
 sulphation, ulcerative colitis 623–626
- Multiple-system atrophy**
 superior mesenteric blood flow, clonidine 59–64
- Muscle**
 amino acid and ammonia fluxes, operation 607–614
 creatine, exercise 367–374
- Muscle function**
 exercise, cystic fibrosis 391–397
- Muscle rigidity**
 energy expenditure, Parkinson's disease 199–204
- Myocardial ischaemia**
 reperfusion injury 511–518*
- Neuroblastoma**
 neuropeptide Y, plasma 205–211
- Neuropeptide Y**
 plasma marker, tumours 205–211
- Neutrophils**
 apoptosis, macrophage recognition 649–655
 reperfusion injury, myocardial ischaemia 511–518*
- Nitric oxide**
 forearm blood flow, volume expansion 541–547
 platelets, haemodialysis 313–318
- Nitrogen**
 protein requirements, colonic function 103–108
- Nociperception**
 bradykinin 337–341
- Non-insulin-dependent diabetes**
 albuminuria, atrial natriuretic peptide 247–253
- Non-invasive continuous blood pressure**
 postural changes, ageing 149–155
- Noradrenaline**
 dopa spillover 65–74
- Normoalbuminuria**
 kidney function, diabetes 445–451
- Nuclear magnetic resonance**
 synovial fluid, rheumatoid arthritis 657–664
- Nyctohemeral rhythm**
 bone remodelling, ageing 375–382
- Obesity**
 lipolysis, adenosine 589–592
- Octreotide**
 renal haemodynamics, diabetes 575–581
- Oestrogen receptors**
 breast tumour, prostaglandins 347–352
- Oophorectomy**
 cytokines, mononuclear cells 503–507
- Operation**
 ammonia and amino acid fluxes, spleen 607–614
- Oral drug delivery**
 human calcitonin 627–631
- Orthostatic hypotension**
 ageing 149–155
- Osmolality**
 vasopressin, chronic renal failure 583–587
- Osteocalcin**
 bone remodelling, nyctohemeral rhythm 375–382
- Osteoporosis**
 bone remodelling, nyctohemeral rhythm 375–382
- Oxidation state**
 glutathione, erythrocytes 637
- Oxygen free radicals**
 reperfusion injury, myocardial ischaemia 511–518*
- ³¹P nuclear magnetic resonance spectroscopy
 liver, gluconeogenesis 183–190
- Pain**
 bradykinin 337–341
- Pancreatic juice**
 lysosomal enzymes, food intake 277–280
- Paracellular permeability**
 colon, spermine 417–423
- Parathyroid hormone**
 calcium, tubular acidification 711–715
- Parkinson's disease**
 weight loss, energy expenditure 199–204
- Pelvic pain**
 blood flow, temperature 55–58
- Pentifylline**
 haemodynamics, portal hypertension 41–45
- Phaeochromocytoma**
 neuropeptide Y, plasma 205–211
- Phagocytosis**
 apoptotic neutrophils 649–655
- Phosphocreatine**
 muscle, exercise 367–374
- Physical activity**
 bone formation, fracture of the proximal femur 665–675
- Plasma**
 angiotensin II, tissue kallikrein 477–482
- Plasma volume**
 Evans Blue dye, pregnancy-induced hypertension 29–34
 iron absorption, erythrocytes 213–219

- Platelet membrane glycoproteins
 angiotensin II, pregnancy-induced hypertension 89–95
- Platelet-activating factor
 ketone bodies, sepsis 495–501
 pulmonary disease 127–138*
- Platelets
 angiotensin II receptors, hypertension 737
 nitric oxide, haemodialysis 313–318
- Polyamines
 colonic barrier function, collagenase 417–423
- Portal hypertension
 endothelin, vascular reactivity 165–170
 pentifylline, haemodynamics 41–45
- Posture
 blood flow, pelvic pain 55–58
 circulatory adjustment, ageing 149–155
- Potassium load
 sodium excretion 567–574
- Pregnancy-induced hypertension
 angiotensin II, platelet membrane glycoproteins 89–95
 angiotensin II receptors 737
 plasma volume, Evans Blue dye 29–34
- Prenatal diagnosis
 fragile X syndrome 255–264*
- Pressor responses
 angiotensin II blockade, salt-deplete beagle 549–556
- Prostacyclin
 sodium retention, ageing 301–306
 urine, diurnal variation 461–465
- Prostaglandin E₂
 sodium–potassium ATPase, sodium retention 307–311
 sodium retention, ageing 301–306
- Prostaglandin F_{2α}
 pulmonary artery, chronic hypoxia 723–729
- Prostaglandins
 idiopathic hypercalciuria 75–80
 oestrogen receptors, breast tumour 347–352
- Proteases
 glycosidases, Crohn's disease 409–415
- Protein
 cardiac output 483–487
 interleukin-6, acute-phase response 731–735
- Protein requirements
 nitrogen, colonic function 103–108
- α₁-Proteinase inhibitor
 glycosidases, Crohn's disease 409–415
- Proteinuria
 diabetes, somatostatin 575–581
 sodium–lithium countertransport, erythrocytes 241–245
- Proteoglycan
 methylprednisolone, lupus nephritis 701–709
- Pulmonary artery
 atrial natriuretic peptide, chronic hypoxia 723–729
- Pulmonary circulation
 atrial natriuretic peptide, chronic hypoxia 723–729
- Pulmonary disease
 platelet-activating factor 127–138*
- Pure autonomic failure
 superior mesenteric blood flow, clonidine 59–64
- Pyridinium cross-links of collagen
 bone remodelling, nyctohemeral rhythm 375–382
- Radioimmunoassay
 plasma neuropeptide Y, tumours 205–211
- Receptors
 insulin-like growth factor-I, kidney failure 233–239
- Renal failure
 atrial and brain natriuretic peptides, plasma 437–444
 platelets, nitric oxide 313–318
- Renal function
 angiotensin II/vasopressin synergism 467–475
 parathyroid hormone–calcium axis 711–715
- Renal haemodynamics
 diabetes, somatostatin 575–581
 erythropoietin 453–459
- Renal metabolism
 aprotinin, lysine 295–299
- Renal papilla
 sodium retention, prostaglandins 301–306
- Renal tubular metabolism
 low-molecular-mass proteins, aprotinin 289–294
- Renin
 angiotensin II blockade, salt-deplete beagle 549–556
- Renin–angiotensin system
 hypertension 13–22
 pregnancy-induced hypertension 89–95
- Reperfusion injury
 myocardial ischaemia 511–518*
- Rheumatoid arthritis
 synovial fluid, α-tocopherol 657–664
- Salbutamol
 voluntary muscle strength 615–621
- Selective radioligand
 atrial natriuretic peptide clearance receptors, kidney 139–142
- Semen
 colonic barrier function 417–423
- Sepsis
 ketone bodies, platelet-activating factor 495–501
- Sialic acid
 hypertriglyceridaemia, cardiovascular risk 593–595
- Skeletal muscle strength
 β₂-adrenoceptor agonist 615–621
- Small-vessel myography
 atrial natriuretic peptide, chronic hypoxia 723–729

- Sodium excretion
 - atrial natriuretic peptide/brain natriuretic peptide system 519–527*
 - potassium load 567–574
 - prostaglandins, ageing 301–306
- Sodium–lithium countertransport
 - erythrocytes, immunoglobulin A nephropathy 241–245
 - insulin resistance, hypertension 319–324
- Sodium–potassium ATPase
 - energy expenditure, growth hormone 325–330
 - prostaglandin E₂, sodium retention 307–311
- Sodium retention
 - prostaglandin E₂, sodium–potassium ATPase 241–245
- Somatostatin
 - renal haemodynamics, diabetes 575–581
- Spermine
 - colonic barrier function, collagenase 417–423
- Splanchnic bed
 - blood pressure, endothelin 165–170
- Spleen
 - amino acid and ammonia fluxes, operation 607–614
 - blood cell kinetics, exercise 47–54
- Stable isotopes
 - iron absorption, erythrocytes 213–219
 - nitrogen, protein requirements 103–108
- Stroke volume
 - postural changes, ageing 149–155
- Strontium
 - bone formation, physical activity 665–675
- Succinylacetone
 - renal Fanconi syndrome 81–87
- Sulphation
 - mucin, ulcerative colitis 623–626
- Superior mesenteric artery
 - endothelium-dependent relaxation, cyclosporin A 179–182
- Superior mesenteric blood flow
 - autonomic failure, clonidine 59–64
- Sympathetic nervous system
 - 6-hydroxydopamine, dopa 65–74
- Synergism
 - angiotensin II/vasopressin, renal function 467–475
- Synovial fluid
 - α -tocopherol, rheumatoid arthritis 657–664
- Synthetic collagenase inhibitors
 - colonic barrier function, spermine 417–423

- Tachycardia
 - angiotensin II blockade, salt-deplete beagle 549–556
- Temperature
 - blood flow, pelvic pain 55–58
- Thermogenesis
 - adrenaline, cirrhosis 191–198
- Thermoregulation
 - burns, children 117–126
- Thirst
 - atrial natriuretic peptide 35–39
- Thoracic aorta
 - endothelium-dependent relaxation, cyclosporin A 179–182
- Thromboxane
 - sodium retention, ageing 301–306
 - urine, diurnal variation 461–465
- Thrombospondin
 - apoptotic neutrophils, macrophages 649–655
- Tilting
 - common carotid artery, baroreflex mechanisms 535–540
- Tissue kallikrein
 - angiotensin II, plasma 477–482
- T-kininogen
 - hypertension 13–22
- α -Tocopherol
 - synovial fluid, rheumatoid arthritis 657–664
- Total peripheral resistance
 - postural changes, ageing 149–155
- Transcranial Doppler sonography
 - flow velocity, carotid artery stenosis 357–366
- Triacylglycerol
 - 24 hour profile, cirrhosis 597–605
- Tubular acidification
 - parathyroid hormone–calcium axis 711–715
- Tumours
 - plasma neuro peptide Y, radioimmunoassay 205–211

- Ulcerative colitis
 - mucin, sulphation 623–626
- Ultrasound
 - gallbladder contractility, Crohn's disease 689–693
- Unstable DNA
 - fragile X syndrome 255–264*
- Urea
 - spleen, operation 607–614
- Urinary dopamine output
 - hypertension, non-insulin-dependent diabetes 247–253
- Urine
 - eicosanoids, diurnal variation 461–465

- Vagal sensory receptors
 - bradykinin, enalapril 399–407
- Vascular impedance
 - carotid artery stenosis, transcranial Doppler sonography 357–366
- Vascular reactivity
 - portal hypertension, endothelin 165–170
- Vasoactive intestinal peptide
 - angiotensin II 557–560
- Vasoconstrictor
 - pulmonary artery, chronic hypoxia 723–729

Vasodilator
pulmonary artery, chronic hypoxia 723–729

Vasopressin
kidney function, diabetes 445–451
metabolic clearance rate, chronic renal failure 583–587
renal function, angiotensin II 467–475

Ventilation
exercise, cystic fibrosis 391–397

Visual perception
hypoxia 633–636

Visual threshold
hypoxia 633–636

Volume expansion
forearm blood flow, nitric oxide 541–547

Voluntary muscle strength
 β_2 -adrenoceptor agonist 615–621

Water transport
colon, spermine 417–423

Weight loss
energy expenditure, Parkinson's disease 199–204

X-linked mental retardation
gene mapping, prenatal diagnosis 255–264*

Zinc
lipid peroxidation, cirrhosis 695–700
