

PROTEOSTASIS

Regulation of cell-non-autonomous proteostasis in metazoans Daniel O'Brien and Patricija van Oosten-Hawle	133-142
Proteostasis regulation by the ubiquitin system John S. Bett	143-151
Cellular strategies to cope with protein aggregation Annika Scior, Katrin Juenemann and Janine Kirstein	153-161
The function of small heat-shock proteins and their implication in proteostasis Annika Strauch and Martin Haslbeck	163-172
Cellular proteostasis: degradation of misfolded proteins by lysosomes Matthew P. Jackson and Eric W. Hewitt	173-180
Shape matters: the complex relationship between aggregation and toxicity in protein-misfolding diseases Heidrun Maja Ries and Carmen Nussbaum-Krammer	181-190
Epigenetic inheritance of proteostasis and ageing Cheryl Li and Olivia Casanueva	191-202
Protein quality control at the ribosome: focus on RAC, NAC and RQC Martin Gamerdinger	203-212
Protein quality control at the mitochondrion Wolfgang Voos, Witold Jaworek, Anne Wilkening and Michael Bruderek	213-225
Protein quality control at the endoplasmic reticulum Kathleen McCaffrey and Ineke Braakman	227-235
Chaperone families and interactions in metazoa Yael Bar-Lavan, Netta Shemesh and Anat Ben-Zvi	237-253
